rajendranelakurthi.github.io

Lead Build and Release Engineer with more than a decade of DevOps, SRE, configuration-management, and enterprise software-delivery experience. Expert in Git SCM, branching and pull-request governance, reproducible builds, Jenkins-based CI/CD, artifact and configuration management, release readiness, go/no-go decisions, production cutovers, rollback planning, and retrospectives. Hands-on with **Python, Go, Bash, JavaScript, Jenkins, GitHub Actions, GitLab CI/CD, Maven, Gradle, JFrog, Nexus, Terraform, Ansible, Linux, Docker, Kubernetes, SQL, NoSQL, APIs, and microservices.** Known for resolving sophisticated delivery problems, automating clear release-status communication, and aligning engineering, QA, SRE, infrastructure, security, and project-management teams around safe, repeatable releases.

CERTIFICATIONS

GitLab Certified Associate

Microsoft Certified: Azure Fundamentals

Microsoft Certified: Azure DevOps Engineer Expert

AWS Certified Solutions Architect - Associate

MuleSoft Certified Developer - Level 1

BUILD & RELEASE ENGINEERING HIGHLIGHTS

- **Release Governance** Owned release calendars, readiness reviews, go/no-go decisions, change approvals, stakeholder communications, production cutovers, and post-release retrospectives.
- **Build & CI/CD Engineering** Engineered reproducible build, test, package, and deployment pipelines with Jenkins, Git, artifact repositories, quality gates, promotion controls, and rollback automation.
- **SCM & Branching** Defined GitFlow, trunk-based, feature, release, and hotfix strategies with pull-request standards, branch protection, merge controls, tagging, and version governance.
- **Configuration Management** Automated server and application configuration with Ansible, Terraform, shell scripting, and version-controlled environment definitions.
- **Release Reliability** Applied SRE practices to release engineering through canaries, health verification, deployment telemetry, incident coordination, rollback readiness, and continuous process improvement.

CORE TECHNOLOGIES

BUILD & RELEASE ENGINEERING

Release planning, release calendars, readiness reviews, go/no-go decisions, cutovers, rollback, retrospectives, release notes, audit trails

CI/CD

Jenkins, Jenkinsfile, GitHub Actions, GitLab CI/CD, Azure Pipelines, CloudBees, parallel workflows, build/test/deploy stages, manual gates

SCM & GIT WORKFLOWS

Git, GitHub, GitLab, Bitbucket, Azure Repos, GitFlow, trunk-based development, feature/release/hotfix branches, pull requests, cherry-picks, tags

BUILD & ARTIFACT TOOLING

Maven, Gradle, ANT, MSBuild, Make, JFrog Artifactory, Nexus, package repositories, semantic versioning, immutable artifacts

SCRIPTING & AUTOMATION

Python, Go, Bash, JavaScript, PowerShell, Unix shell, command-line tooling, APIs, YAML, JSON

CONFIGURATION MANAGEMENT

Ansible, Terraform, CloudFormation, Packer, environment configuration, server provisioning, secrets, policy validation

QUALITY & DEVSECOPS

Unit and integration tests, smoke tests, SonarQube, Fortify, Black Duck, SAST, artifact signing, approvals, compliance evidence

PLATFORMS

Linux, Unix, Docker, Kubernetes, AWS, Azure, microservices, distributed systems, highly available services

DATA & INTEGRATION

SQL, PostgreSQL, MySQL, MongoDB, relational and NoSQL databases, REST APIs, data structures, persistence layers

RELEASE OPERATIONS

Automated status reporting, dependency tracking, risk management, stakeholder coordination, incident response, RCA, release metrics

PROFESSIONAL EXPERIENCE

Lead Build & Release Engineer | AT&T Services Inc.

08/2023 - Present

Skills Used: Jenkins, Git, Python, Go, Bash, JavaScript, Terraform, Ansible, JFrog, Kubernetes

- Owned end-to-end release engineering for distributed application and platform services, coordinating scope, dependencies, schedules, readiness criteria, change windows, deployment sequencing, and production validation.
- Led release-readiness and go/no-go meetings with engineering, QA, SRE, product, infrastructure, security, and project-management stakeholders; documented decisions, risks, owners, and rollback triggers.
- Designed reproducible Jenkins pipelines covering source checkout, dependency resolution, compilation, unit and integration testing, security scanning, packaging, artifact publication, environment promotion, deployment, and verification.
- Defined Git branching strategies for trunk-based, feature, release, and hotfix workflows with protected branches, pull-request reviews, merge policies, cherry-pick controls, release tags, and version traceability.
- Implemented build-once/promote-many practices using immutable, versioned artifacts in JFrog and Nexus, ensuring the same tested package progressed through staging and production.
- Developed Python, Go, Bash, and JavaScript tooling to automate release orchestration, dependency checks, changelog generation, versioning, status notifications, evidence collection, and rollback execution.
- Automated release-status communication through dashboards, pipeline events, API integrations, notifications, and concise stakeholder reports covering build health, blockers, approvals, risk, and deployment progress.
- Applied canary and phased-rollout patterns with smoke tests, health gates, observability checks, human approvals, and automated rollback to align deployment velocity with service risk.
- Facilitated release retrospectives and converted deployment failures, escaped defects, wait states, and coordination gaps into owned actions, pipeline controls, documentation, and measurable process improvements.
- Partnered with microservices and communication-platform teams on API contracts, data structures, SQL/NoSQL persistence changes, backward compatibility, schema sequencing, and safe rollout of dependent services.

Senior Build & Release Engineer | GlobalLogic

03/2023 - 08/2023

Skills Used: Jenkins, GitLab CI/CD, Git, Python, Bash, Docker, Kubernetes, Terraform, Jira

- Built and maintained scalable CI/CD pipelines with parallel build and test execution, reusable templates, gated promotions, artifact retention, and controlled production releases.
- Managed release branches, pull requests, merge approvals, tags, hotfixes, and backports while preserving an auditable mapping between commits, builds, artifacts, and deployments.
- Administered self-hosted build agents and runners, tuned executor capacity and caching, and resolved queue, workspace, dependency, credential, and environment failures.
- Coordinated release plans and go/no-go checkpoints across development, QA, operations, and project management, escalating blockers and communicating status automatically.
- Ran post-release reviews, analyzed lead time, failure rate, rollback, and recovery trends, and prioritized automation that reduced manual handoffs and release risk.

Senior Release / DevOps Engineer | Akamai Technologies

12/2021 - 03/2023

Skills Used: Jenkins, GitHub Actions, Git, Python, Terraform, Docker, Kubernetes, JFrog

- Standardized build, test, package, and deployment workflows across microservices using Jenkins and GitHub Actions with reusable pipeline components.
- Established artifact versioning, repository promotion, retention, and provenance practices to support repeatable releases and rapid rollback.
- Automated release notes, change inventories, readiness evidence, deployment status, and stakeholder notifications using Python and service APIs.
- Troubleshoot sophisticated pipeline, dependency, container, configuration, and distributed-system failures across engineering teams.
- Integrated infrastructure and application changes into coordinated release trains with sequencing, compatibility checks, and environment-specific validation.

Senior Release Engineer / SRE | Turvo India Pvt Ltd

04/2020 - 12/2021

Skills Used: Jenkins, GitHub Actions, Git, Python, Bash, Terraform, Ansible, Prometheus, Grafana

- Applied SRE principles to release engineering by defining deployment health indicators, alert thresholds, rollback criteria, and post-release observation periods.
- Designed parallel CI workflows and reusable build automation for application, infrastructure, database, and configuration changes.
- Coordinated canary releases, production validation, incident response, and recovery activities for highly available distributed services.
- Created release dashboards and automated system-status reporting to expose pipeline health, deployment progress, failures, and operational risk.
- Facilitated blameless release retrospectives and drove corrective actions into pipeline automation, test coverage, configuration controls, and runbooks.

Senior Build & Configuration Engineer | HCL Technologies

02/2019 - 04/2020

Client: Mercedes-Benz Research & Development India

Skills Used: Jenkins, Git, Maven, Ansible, Bash, Docker, Kubernetes, SonarQube

- Maintained build and release pipelines for Java and microservices workloads across development, test, UAT, and production environments.
- Managed configuration baselines, server deployment automation, environment variables, secrets, and release-specific application settings through version-controlled workflows.
- Defined branching, pull-request, build-validation, and artifact-promotion standards for development teams.
- Integrated quality, security, smoke-test, and deployment-verification gates into Jenkins delivery pipelines.
- Supported go/no-go reviews, production cutovers, rollback preparation, release communications, and post-deployment retrospectives.

Build & Release Engineer | Mphasis Ltd

08/2016 - 12/2018

Client: HPE

Skills Used: Jenkins, Git, Maven, Python, Bash, Ansible, Nexus, SQL, MongoDB

- Created automated build and release pipelines for multiple application components using Jenkins, Git, Maven, Ansible, and Nexus.
- Implemented feature, integration, release, and hotfix branch workflows with pull-request reviews, release tags, and controlled code promotion.
- Automated builds, deployments, configuration updates, status reporting, and operational checks with Python and Unix shell scripting.
- Coordinated application, API, SQL, NoSQL, and configuration changes across environments to preserve release compatibility and data integrity.
- Diagnosed build, dependency, packaging, repository, server, and deployment issues and documented repeatable recovery procedures.

EDUCATION

B.Tech (2009-2013) in Information Technology
Prakasam Engineering College, Jawaharlal Nehru Technological University, Kakinada
