rajendranlakurthi.github.io

Lead DevOps Engineer with 10+ years of enterprise experience building cloud infrastructure, automating software delivery, and supporting reliable production platforms. Hands-on expertise in **AWS, Terraform, CloudFormation, CI/CD, Ansible, Kubernetes, and DevSecOps**. Integrates security scanning, policy validation, quality gates, and operational telemetry into application and infrastructure delivery. Partners with developers to improve release readiness, troubleshoot distributed systems, and strengthen high availability, backup recovery, and deployment resilience. Additional Healthcare Payer application support experience through the Mphasis/HPE engagement.

CERTIFICATIONS

GitLab Certified Associate

Microsoft Certified: Azure Fundamentals

Microsoft Certified: Azure DevOps Engineer Expert

AWS Certified Solutions Architect - Associate

MuleSoft Certified Developer - Level 1

CLOUD ENGINEERING & DELIVERY HIGHLIGHTS

- Delivery Automation:** Reusable CI/CD pipelines and infrastructure modules standardize environment provisioning, artifact promotion, and deployment validation.
- DevSecOps:** Security scanning, configuration checks, protected approvals, and traceable release evidence embed controls throughout software delivery.
- Reliability:** Application telemetry, actionable alerts, recovery runbooks, and tested rollback procedures support dependable production operations.

CORE TECHNOLOGIES

CI/CD & DEPLOYMENT

Jenkins, GitLab CI/CD, GitHub Actions, CodePipeline, CodeBuild, CodeDeploy, reusable pipelines, quality gates, release approvals, rollback

INFRASTRUCTURE AS CODE

Terraform modules, CloudFormation templates and change sets, remote state, plan review, drift detection, environment provisioning

AWS & CLOUD-NATIVE PLATFORMS

EC2, EKS, ECR, VPC, IAM, ALB/NLB, Auto Scaling, S3, RDS, Route 53, Secrets Manager, Systems Manager

KUBERNETES & CONTAINERS

Docker, Kubernetes, EKS, Helm, ArgoCD, readiness probes, resource limits, autoscaling, disruption budgets, rolling deployments

DEVSECOPS & COMPLIANCE AUTOMATION

SonarQube, Fortify, Black Duck, SAST, SCA, image and secrets scanning, IaC policy checks, least privilege, approval evidence

CONFIGURATION & AUTOMATION

Ansible roles and playbooks, Linux, Bash, Python, PowerShell, AWS CLI, YAML, JSON, configuration templates, service management

OBSERVABILITY & RELIABILITY

CloudWatch, Prometheus, Grafana, Splunk, ELK, metrics, logging, alerting, SLOs, root-cause analysis, multi-AZ availability, disaster recovery

RELEASE & DOMAIN EXPERIENCE

Change management, artifact promotion, smoke tests, recovery drills, developer collaboration; Healthcare Payer enrollment, eligibility and claims services

PROFESSIONAL EXPERIENCE

Lead DevOps Engineer | AT&T Services Inc.

08/2023 - Present

Skills Used: AWS, Terraform, CloudFormation, GitLab CI/CD, Jenkins, EKS, Ansible, CloudWatch, DevSecOps

- Led cloud platform and CI/CD engineering, partnering with developers, security, and operations teams to standardize application delivery and improve production readiness.
- Designed reusable Jenkins and GitLab pipelines for build, automated testing, security checks, artifact publication, environment promotion, deployment, and rollback verification.
- Engineered Terraform modules and CloudFormation templates for AWS compute, networking, IAM, storage, EKS, and monitoring; enforced version control, reviewed plans, and environment-specific inputs.
- Automated infrastructure provisioning and Linux configuration with Ansible, Bash, and Python, coordinating package installation, secrets retrieval, service startup, and post-provisioning validation.
- Integrated SAST, dependency, container-image, and secrets scanning into CI/CD; configured severity-based quality gates and tracked approved exceptions through remediation.
- Automated infrastructure policy checks for encryption, public exposure, IAM permissions, and resource tagging; retained scan results and approval records as release evidence.
- Delivered containerized services to EKS using Helm and GitOps workflows, managing readiness checks, resource requests and limits, autoscaling, and controlled rollout settings.
- Strengthened Kubernetes maintenance resilience with replica placement and disruption budgets; validated node-drain behavior separately from application rollout controls.
- Implemented CloudWatch, Prometheus, Grafana, and centralized logging dashboards to correlate deployment events with latency, errors, saturation, and infrastructure health.
- Established service health checks and actionable alerts with development teams; used SLO-oriented reviews to prioritize recurring failures and operational improvements.
- Designed multi-AZ deployment patterns and backup recovery procedures; exercised restoration and failover runbooks against agreed recovery objectives and documented recovery gaps.
- Troubleshoot pipeline, Terraform state, IAM, DNS, network, and Kubernetes failures; converted root-cause findings into reusable automation, preventive checks, and support runbooks.

Senior DevOps Engineer | GlobalLogic

03/2023 - 08/2023

Skills Used: AWS, Terraform, GitLab CI/CD, Ansible, Linux, Docker, Kubernetes, DevSecOps

- Built reusable CI/CD templates for application and infrastructure releases, integrating automated tests, artifact versioning, approvals, and smoke-test stages.
- Automated cloud environment setup with Terraform and Ansible, standardizing configuration inputs, runtime prerequisites, and deployment credentials.
- Administered Linux build agents and container runners, resolving toolchain, cache, permission, dependency, and resource-capacity issues.
- Embedded code-quality, dependency, and image checks into delivery pipelines and enforced protected branches and controlled production access.
- Deployed Docker and Kubernetes workloads with versioned manifests, configuration separation, readiness probes, and rollout verification.
- Partnered with development and QA teams to investigate release failures, refine validation checks, and maintain tested rollback and support procedures.

Senior DevOps Engineer II | Akamai Technologies

12/2021 - 03/2023

Skills Used: AWS, Terraform, CloudFormation, EKS, GitHub Actions, Ansible, CloudWatch

- Provisioned AWS environments through Terraform modules and CloudFormation templates, using change reviews, consistent tagging, and repeatable deployment parameters.
- Implemented GitHub Actions and Jenkins workflows for application builds, automated tests, artifact publication, and multi-environment release promotion.
- Deployed Kubernetes microservices with Docker, Helm, and ArgoCD, validating service readiness, configuration changes, and recovery options before cutover.
- Automated Linux configuration and operational checks with Ansible, Python, and shell scripts to reduce environment drift and repeated manual setup.
- Implemented IAM, VPC, security-group, and load-balancer configurations that supported private application communication and controlled operational access.
- Built CloudWatch dashboards and alarms for application and infrastructure health; investigated capacity, network, container, and deployment failures.
- Supported AWS Backup and disaster-recovery workflows, validating restored resources, application connectivity, and documented recovery sequences.

Senior DevOps Engineer / Senior SRE | Turvo India Pvt Ltd

04/2020 - 12/2021

Skills Used: AWS, Jenkins, Terraform, Ansible, Kubernetes, Prometheus, Grafana, Python

- Designed CI/CD pipelines and Terraform automation for AWS application and infrastructure delivery with repeatable validation and deployment stages.
- Built Jenkins shared libraries for image versioning, artifact publication, deployment automation, and consistent promotion across environments.
- Administered CloudBees Jenkins, JFrog Artifactory, and Xray, integrating dependency and artifact checks into enterprise delivery workflows.
- Developed Ansible roles for highly available Prometheus, Grafana, and Node Exporter monitoring stacks, including configuration templates and service verification.
- Created Python Prometheus exporters and dashboards to expose application-specific health signals and improve incident diagnosis.
- Developed internal FastAPI integrations across Jenkins, Jira, and JFrog to automate project onboarding and recurring operational tasks.
- Supported production releases and incident response using health checks, log analysis, rollback decisions, and post-incident reviews with development teams.

Senior DevOps Engineer | HCL Technologies

02/2019 - 04/2020

Client: Mercedes-Benz Research & Development India

Skills Used: AWS, Ansible, Linux, Shell Scripting, Jenkins, Maven, Tomcat, JBoss, Helm

- Built Jenkins delivery pipelines for Java applications and REST microservices across development, test, UAT, and production environments.
- Automated Linux application setup and configuration with Ansible and shell scripts, including runtime dependencies, environment properties, access permissions, and service checks.
- Managed Maven build outputs and deployment packages for Tomcat and JBoss services, preserving version traceability and environment-specific configuration.
- Deployed Kubernetes applications with Helm and version-controlled manifests, validating configuration changes, pod health, and service connectivity.
- Troubleshoot AWS application dependencies involving EC2, load balancers, RDS, CloudWatch, certificates, and identity integrations during releases and migrations.
- Coordinated multi-environment releases with application teams, tracking deployment prerequisites, change approvals, validation results, and recovery actions.
- Implemented ELK-based logging and maintained deployment guides, architecture documentation, and operational runbooks for engineering and support teams.

DevOps Engineer | Mphasis Ltd

08/2016 - 12/2018

Client: HPE

Skills Used: AWS, Ansible, Linux, Shell Scripting, Python, Maven, Tomcat, JBoss, Nexus, Healthcare Payer

- Supported Healthcare Payer application releases within the Mphasis/HPE engagement, using Ansible to promote enrollment, eligibility, and claims-processing service packages across environments.
- Developed shell and Python scripts for payer application configuration, service control, batch-job checks, log inspection, and post-deployment validation.
- Supported Linux build and application servers, resolving permission issues, failed processes, disk usage, missing dependencies, and connectivity problems.
- Authored reusable Terraform modules and AWS CLI automation to provision infrastructure and maintain environment-specific service configurations.
- Established Git branching, release tagging, and artifact repository practices to keep application versions and deployment inputs traceable.
- Coordinated payer application releases across API, database, batch, and UI components, validating dependencies, release sequencing, and handover with QA and support teams.
- Supported Linux-hosted payer services by investigating failed batch jobs, missing inbound files, permission issues, and application connectivity; coordinated recovery and controlled job reruns with support teams.
- Partnered with application and QA teams on enrollment, eligibility, and claims workflow smoke tests after releases, documenting results, defects, and rollback readiness.

EDUCATION

B.Tech (2009-2013) in Information Technology

Prakasam Engineering College, Jawaharlal Nehru Technological University, Kakinada
