

Lead DevOps Engineer with 10+ years of IT infrastructure, Kubernetes platform engineering, CI/CD automation, and production operations experience. Designs and administers Azure infrastructure and end-to-end AKS platforms using Terraform, Azure DevOps, Jenkins, Helm, and Argo CD GitOps. Builds developer self-service integrations with Python/FastAPI, manages Linux/Unix systems and build agents, and delivers GPU workloads and Milvus/Qdrant services. Combines Kubernetes security, observability, upgrade planning, resource optimization, SonarQube quality controls, and JFrog artifact management with senior incident troubleshooting. Brings GCP/GKE knowledge and HIPAA/SOC2 control awareness; hands-on cloud delivery focuses on Azure.

Certifications

GitLab Certified Associate	Microsoft Certified: Azure Fundamentals	Microsoft Certified: Azure DevOps Engineer Expert	AWS Certified Solutions Architect - Associate
----------------------------	---	---	---

Kubernetes & Platform Engineering Highlights

- End-to-End Kubernetes Platforms: Connects AKS architecture, security, workload onboarding, observability, scaling, upgrades, and recovery readiness into maintainable platform services.
- Developer Enablement: Standardizes reusable Terraform, CI/CD, GitOps, artifacts, build agents, and Python/FastAPI self-service workflows for repeatable application delivery.
- AI Workload & Production Operations: Deploys GPU capacity and persistent vector database services while troubleshooting platform incidents and improving resource utilization and operational readiness.

Core Technologies

Knowledge & Evaluation Areas

GCP/GKE architecture and Kubernetes portability; LaunchDarkly feature-flag concepts; Windsurf AI-assisted development concepts; HIPAA/SOC2 control awareness, access restrictions, encryption, change evidence

Azure Infrastructure & Platform Engineering

Terraform modules, remote state, Azure networking, AKS, ACR, managed identities, Key Vault, Azure Policy, private access, reusable environment provisioning

Containers & Production Operations

Kubernetes, AKS, Docker, Azure CNI, ingress/DNS, namespaces, RBAC, workload identity, NetworkPolicies, TLS/certificates, HPA, cluster autoscaler, requests/limits; AKS upgrades, API compatibility, cordon/drain, PodDisruptionBudgets, surge capacity; OpenShift projects/routes

Observability & Reliability

Azure Monitor, Log Analytics, Application Insights, Prometheus, Grafana, alerts, root-cause analysis, capacity planning, resource tuning, operational documentation

Automation & Developer Self-Service

PowerShell, advanced Bash, Python, FastAPI, REST APIs, Ansible, Linux/Unix administration, diagnostics, onboarding workflows, reusable automation

CI/CD, GitOps & Build Agents

Azure DevOps YAML, Jenkins shared libraries, GitHub Actions, Argo CD, Helm, release approvals, artifact promotion, Linux/Windows agents, caching, dependency management

DevSecOps & Artifact Management

SonarQube, JFrog Artifactory, Xray, code-quality gates, artifact versioning, image validation, secrets management, least privilege, audit evidence

AI & Vector Database Platforms

GPU node pools, NVIDIA device plugin, GPU requests, taints/tolerations, node affinity, Milvus, Qdrant, Helm, StatefulSets, persistent storage, sizing, health checks, backup/restore

Professional Experience

Lead DevOps Engineer | AT&T Services Inc. 08/2023 - Present

Skills Used: Azure, Terraform, Azure DevOps, Jenkins, AKS, Argo CD, Helm, Python, PowerShell, Bash, SonarQube, JFrog Artifactory, Azure Monitor, OpenShift, Milvus, Qdrant, FastAPI, GPU Nodes, Docker, Bicep, Prometheus, Grafana

- Provided senior production escalation support for scheduling, image-pull, crash-loop, storage, networking, and resource-pressure incidents; documented root causes, recovery steps, and corrective actions.
- Designed and maintained Azure platform foundations with reusable Terraform modules for networking, identity, storage, and AKS, aligning infrastructure changes with application dependencies and platform standards.
- Built reusable Azure DevOps and Jenkins pipeline stages for builds, automated tests, image publication, environment promotion, and post-deployment verification.
- Developed PowerShell, Bash, and Python automation for provisioning checks, operational diagnostics, deployment readiness, and recurring administration tasks.
- Operated AKS application delivery with Helm and Argo CD GitOps, maintaining versioned environment configuration, deployment health checks, and reviewed recovery procedures.
- Deployed Milvus and Qdrant through Helm; administered persistent storage, resource sizing, access controls, backup procedures, and restore validation for vector-search services.
- Managed Terraform remote state, environment isolation, plan reviews, and approval controls to keep infrastructure changes reproducible and traceable.
- Secured workloads with image vulnerability scanning, hardened containers, network policies, Key Vault secrets, and TLS lifecycle management; coordinated remediation and certificate/connectivity troubleshooting.
- Integrated Jenkins and SonarQube quality gates with JFrog Artifactory publication, build metadata, and controlled artifact promotion for repeatable application releases.
- Administered OpenShift application projects, routes, role bindings, and deployment settings; published onboarding patterns and troubleshooting guidance for platform consumers.
- Tuned requests/limits, HPA, cluster autoscaler settings, and node-pool sizing to balance stability, performance, and cost; reviewed capacity requirements with application teams.
- Reviewed platform designs and pull requests, mentored engineers, and partnered with stakeholders on standards, roadmap priorities, and technical tool evaluations.

- Evaluated GPU, vector-search, and deployment capabilities through proofs of concept, documenting capacity, security, supportability, and cost tradeoffs for stakeholders.
- Maintained release recovery checklists, rollback inputs, incident runbooks, and post-incident corrective actions to improve readiness for production disruptions.
- Configured Linux and Windows build agents, diagnosed dependency, cache, credential, and capacity failures, and standardized toolchain prerequisites for reliable execution.
- Owned end-to-end AKS platform architecture and administration, aligning cluster capabilities, application onboarding, engineering standards, and operational runbooks with platform roadmap priorities.
- Planned AKS control-plane and node-pool upgrades with API-deprecation checks, add-on compatibility testing, maintenance windows, surge capacity, PodDisruptionBudgets, node-image updates, and staged validation.
- Deployed GPU node pools for AI applications, validating NVIDIA device-plugin readiness, GPU resource requests, node affinity, and taints/tolerations for workload isolation.
- Delivered FastAPI and REST microservices through Azure DevOps, Azure Container Registry, and Helm, configuring health probes, environment settings, ingress routing, and controlled rollouts.
- Built Azure Monitor, Log Analytics, Prometheus, and Grafana dashboards and alerts for node health, pod restarts, deployment status, application latency, and capacity.

Senior DevOps Engineer | GlobalLogic 03/2023 - 08/2023

Skills Used: Azure, GitHub Actions, Terraform, Linux, Docker, Kubernetes, Jenkins, SonarQube, JFrog Artifactory, OpenShift, Helm

- Maintained Terraform configuration and Ansible automation for Azure environment setup, reviewing deployment plans and Linux configuration drift.
- Built Jenkins stages with SonarQube analysis and JFrog Artifactory publication, validating release packages, build metadata, and artifact promotion across environments.
- Maintained Kubernetes and OpenShift application deployments, configuring Helm values, routes, health probes, resource limits, and recovery steps for shared services.
- Automated runner readiness and deployment diagnostics with Python and shell scripts, publishing troubleshooting utilities for application teams.
- Partnered with application teams to troubleshoot Azure delivery and implement reusable GitHub Actions workflows for builds, tests, and release promotion.
- Standardized Docker images, Kubernetes deployment patterns, branch protections, and image-validation checks to make releases easier for developers to troubleshoot.
- Maintained Linux/Windows GitHub runners and shared build tooling, diagnosing dependency, cache, credential, and execution-capacity failures.
- Protected deployment inputs with Key Vault and least-privilege service connections; validated required checks and documented release handoffs.
- Organized artifact feeds and repository consumption patterns and coached engineers on merge workflows, pipeline ownership, and environment promotion.
- Administered namespaces, services, ConfigMaps, secrets, and resource settings and diagnosed pod scheduling, container startup, and service-connectivity failures.

Senior DevOps Engineer II | Akamai Technologies 12/2021 - 03/2023

Skills Used: Azure, GitHub Actions, Terraform, AKS, Argo CD, Helm, Ansible, Azure Monitor, Jenkins, SonarQube, JFrog Artifactory, Milvus, GPU Nodes, Python

- Built GitHub Actions and Jenkins pipelines for Azure-hosted microservices, integrating Maven tests, ACR image publication, and Kubernetes deployment checks.
- Published binaries and container images to JFrog Artifactory from Jenkins pipelines and enforced SonarQube quality feedback before release promotion.
- Deployed Milvus services on Azure Kubernetes infrastructure, validating Helm configuration, persistent volumes, resource capacity, monitoring, and operational readiness.
- Supported GPU-enabled AKS application deployments, validating workload placement, resource allocation, and operational telemetry with application teams.
- Delivered Azure infrastructure with reusable Terraform modules and ARM templates; reviewed infrastructure plans and environment configuration.
- Implemented Argo CD GitOps and Helm packaging for AKS, providing versioned environment configuration and validated rollback paths.
- Maintained Linux build runners and automated environment configuration with Ansible and scripts to keep build dependencies and execution environments consistent.
- Improved service visibility with Azure Monitor, Log Analytics, and Application Insights; partnered with developers on incidents and recovery documentation.
- Managed Kubernetes workloads, node-pool capacity, deployment configuration, and secure application connectivity across engineering environments.
- Planned AKS upgrade readiness by reviewing version compatibility, deployment manifests, health probes, resource capacity, and maintenance requirements.

Senior DevOps Engineer / Senior SRE | Turvo India Pvt Ltd 04/2020 - 12/2021

Skills Used: Azure, Terraform, CloudBees CI, Groovy, Python / FastAPI, JFrog, Kubernetes, Jenkins, SonarQube, JFrog Artifactory, Qdrant, AKS, Prometheus, Grafana, Helm

- Developed Python FastAPI services integrating Jenkins, Jira, and JFrog to automate project onboarding and provide self-service access to delivery workflows.
- Administered CloudBees CI (Jenkins Enterprise), JFrog Artifactory, and Xray for SaaS product engineering, supporting reliable builds, secure artifact storage, and release execution.
- Provisioned Azure application infrastructure with Terraform and Ansible, maintaining environment-specific release configuration.
- Worked with developers during production incidents, defect isolation, and sprint retrospectives; turned recurring support issues into platform fixes and reusable guidance.
- Developed Groovy Jenkins shared libraries for image versioning and artifact publishing, allowing developers to reuse tested pipeline steps across services.
- Standardized Docker/Helm deployment patterns for AKS services and payment workloads, validating configuration, health checks, and production readiness.
- Built Python Prometheus exporters and highly available monitoring stacks with Ansible, Grafana, and Node Exporter to expose application and platform health.
- Supported Qdrant deployment and administration for vector-search services, configuring persistent storage, resource limits, API access, health checks, and recovery procedures.
- Managed artifact retention and dependency access for shared delivery services, troubleshooting repository failures and preserving approved build inputs for recovery.
- Partnered with microservice developers on build dependencies, unit and integration test stages, test-result publication, and repeatable promotion of release artifacts.

Senior DevOps Engineer | HCL Technologies 02/2019 - 04/2020

Client: Mercedes-Benz Research & Development India

Skills Used: Azure, Terraform, Jenkins, Maven, Ansible, Kubernetes, Helm, SonarQube, JFrog Artifactory, OpenShift

- Partnered with developers on Azure platform and CI/CD improvements, translating service requirements into infrastructure and deployment standards.
- Maintained Kubernetes and OpenShift application configuration, troubleshooting routes, service connectivity, image pulls, and deployment readiness across shared environments.
- Versioned Azure deployment parameters and ARM/Ansible automation, reviewing infrastructure changes alongside application releases.
- Built Jenkins and Maven delivery workflows for REST microservices across test, security-validation, UAT, and production environments.
- Integrated SonarQube analysis and JFrog Artifactory publishing into Jenkins microservice workflows, keeping quality checks and release artifacts traceable.
- Implemented ELK and Azure Monitor visibility; documented incident diagnostics and release procedures for application and platform teams.
- Scripted Linux and application health validation with Python and Bash, capturing diagnostic output for operational handoffs.
- Reviewed release permissions and Key Vault integration with application teams, maintaining deployment validation and audit-ready change records.
- Coordinated database and API deployment dependencies with developers, validating release order and recovery readiness before production handoff.
- Validated certificate expiry and service connectivity during release readiness checks, coordinating configuration fixes with application and infrastructure owners.

DevOps Engineer | Mphasis Ltd 08/2016 - 12/2018

Client: HPE

Skills Used: Azure, Terraform, Ansible, Python, Linux, Nexus, Jenkins, SonarQube, JFrog Artifactory, PowerShell, ARM templates

- Maintained Jenkins build agents and Python/Bash automation, diagnosing toolchain, cache, credential, and execution failures to support reliable shared delivery.
- Automated Azure infrastructure and application provisioning with Terraform, ARM templates, and Ansible.
- Validated environment readiness and application dependencies before deployments, checking cloud access, network connectivity, and required configuration.
- Integrated SonarQube code-quality checks and JFrog Artifactory publication into Jenkins workflows for API, database, and UI release artifacts.
- Validated cloud deployment permissions and protected credentials, documenting access and configuration prerequisites for application teams.
- Documented onboarding, platform configuration, and support procedures, helping developers adopt repeatable environment and release practices.
- Captured deployment manifests and configuration baselines for environment handoffs, helping support teams trace runtime failures to source or release changes.
- Built CI/CD workflows for API, database, and UI components with development teams, standardizing build dependencies and release promotion for shared application services.
- Packaged containerized services with Helm and versioned environment values, validating deployment health and recovery before release.
- Defined Git branching and protected-branch checks, versioned artifacts, and environment parameters for repeatable application promotion.

Education

B.Tech (2009-2013) in Information Technology

Prakasam Engineering College, Jawaharlal Nehru Technological University, Kakinada
