

RAJENDRA PRASAD N

LEAD DEVOPS ENGINEER | AWS CLOUD, DEVOPS, SRE & KUBERNETES

rajendran.scm@gmail.com

+1 (469) 926-4201

Dallas, TX

linkedin.com/in/rajendranlakurthi

rajendranlakurthi.github.io

Lead DevOps Engineer with more than a decade of enterprise delivery, release engineering, cloud infrastructure, and production operations experience across Linux and Unix environments. Deep hands-on strength in **shell scripting, CI/CD pipeline engineering, infrastructure as code, build and deployment automation, and container orchestration** using Jenkins, GitHub Actions, GitLab CI, Terraform, CloudFormation, Ansible, Bash, Python, Docker, Kubernetes, EKS, and OpenShift. Proven record modernizing application platforms, troubleshooting complex releases, integrating monitoring and security controls, and improving the reliability and repeatability of mission-critical delivery workflows.

CERTIFICATIONS

GitLab Certified Associate

Microsoft Certified: Azure Fundamentals

Microsoft Certified: Azure DevOps Engineer Expert

AWS Certified Solutions Architect - Associate

MuleSoft Certified Developer - Level 1

KEY PLATFORM ACHIEVEMENTS

- Release Engineering** Directed enterprise release orchestration, build automation, change governance, and deployment troubleshooting across AWS, Kubernetes, and mission-critical application platforms.
- AWS Platform Engineering** Designed AWS-first infrastructure with Terraform, CloudFormation, and Ansible to standardize provisioning, improve repeatability, and support secure multi-environment delivery.
- DevSecOps & Governance** Integrated security scanning, policy-driven controls, IAM, MFA, and secure network patterns into CI/CD and cloud operations to strengthen delivery governance and compliance.
- Kubernetes Platforms** Delivered containerized workloads on EKS, OpenShift, Rancher, and self-managed Kubernetes environments using Helm, ArgoCD, and repeatable manifest-driven workflows.
- Observability** Implemented CloudWatch, Prometheus, Grafana, Splunk, ELK, and custom telemetry pipelines to improve platform visibility, incident response, and operational diagnosis.

CORE TECHNOLOGIES

CI/CD PLATFORMS

GitLab, GitLab CI/CD, GitLab Duo, GitLab Runners, Jenkins, AWS CodePipeline, AWS CodeBuild, AWS CodeDeploy, CloudBees, ArgoCD

CONTAINERS & ORCHESTRATION

Docker, Docker Swarm, ECS, Kubernetes, Helm, Istio, Consul

MANAGED KUBERNETES

EKS, OpenShift, Rancher, self-managed Kubernetes, hybrid Kubernetes

SCRIPTING & PROGRAMMING

Shell, Batch, Python, PowerShell, .NET (C#), Core Java

DATABASES & RELEASE TOOLS

MySQL, PostgreSQL, MongoDB, Amazon RDS, Amazon Aurora, Liquibase, JFrog, SonarQube, Fortify, Black Duck

OPERATING SYSTEMS

Linux, RHEL, Ubuntu, HP-UX, Windows Server 2012

BUILD TOOLS

ANT, Maven, MSBuild, Make, Gradle

INFRASTRUCTURE AS CODE

Terraform, CloudFormation, Ansible, Packer, YAML pipelines, AWS CLI

SOURCE CONTROL & SCM

GitLab, GitHub, Bitbucket, Gerrit, Subversion, TFS

CLOUD PLATFORMS

AWS, Linode, multi-account landing zones, VPC, Transit Gateway, VPN, Direct Connect, Route 53, ALB, NLB, CloudFront

MONITORING & LOGGING

Amazon CloudWatch, CloudTrail, Grafana, Prometheus, AppDynamics, Splunk, ELK, Fluentd, InfluxDB

OTHER PLATFORMS

IIS, Apache Tomcat, JBoss, WebLogic, VMware ESXi, Vagrant, Hyper-V, Vault, datree.io, Amazon ECR

PROFESSIONAL EXPERIENCE

Lead DevOps Engineer | AT&T Services Inc.

08/2023 - Present

Skills Used: AWS, GitLab, GitLab CI/CD, GitLab Duo, Git, Terraform, EKS, Docker, Helm, Bash, Python

- Administered GitLab groups, projects, repositories, protected branches, merge request rules, approval policies, CODEOWNERS, deploy tokens, access tokens, and role-based permissions across enterprise engineering teams.
- Designed Git branching strategies covering feature, release, hotfix, and trunk-based workflows, with protected-branch controls and merge standards aligned to release governance and audit requirements.
- Architected reusable GitLab CI/CD pipeline templates with parent-child and multi-project pipelines, rules-based execution, environment promotion, artifact retention, caching, and controlled manual approvals.
- Built Terraform modules and GitLab CI/CD workflows to provision AWS networking, IAM, EKS, compute, storage, and supporting platform services through repeatable, version-controlled infrastructure changes.
- Standardized Docker image build, scan, versioning, and promotion workflows through GitLab pipelines and deployed containerized services to Amazon EKS using Helm and Kubernetes manifests.
- Created GitLab platform standards, migration playbooks, runner troubleshooting guides, branching documentation, and operational runbooks for engineering and support teams.
- Led the migration of source repositories and delivery pipelines from Azure DevOps to GitLab, defining phased cutover plans, repository mappings, access controls, validation gates, and rollback procedures to protect active development streams.
- Implemented GitLab Duo capabilities across software delivery workflows, enabling AI-assisted code generation, code explanation, test creation, merge request summaries, vulnerability remediation, and developer adoption guardrails.
- Designed secure Terraform delivery with remote state, state locking, reusable modules, plan and apply separation, protected environments, approval gates, and least-privilege AWS IAM roles.
- Monitored runner capacity, pipeline duration, failure trends, queue time, cache efficiency, and deployment health to improve GitLab platform reliability and developer productivity.
- Provisioned and operated self-managed GitLab runners on AWS using autoscaling, tagging, protected-runner policies, isolated execution, cache optimization, and workload-specific runner pools for secure, high-throughput builds.
- Established GitLab Duo governance covering approved use cases, access controls, data-handling expectations, human review requirements, adoption metrics, and enablement guidance for development teams.
- Integrated GitLab DevSecOps controls into pipelines, including secret detection, dependency and container scanning, SAST, IaC validation, security gates, and policy-driven merge approvals.
- Implemented AWS authentication for GitLab pipelines using short-lived role-based credentials and controlled environment variables, reducing reliance on long-lived cloud access keys.
- Automated GitLab repository and pipeline administration with Bash and Python, including project bootstrap, variable configuration, runner registration, policy enforcement, and migration validation.

Senior DevOps Engineer | GlobalLogic

03/2023 - 08/2023

Skills Used: AWS, GitLab CI, Terraform, Jira, Kubernetes

- Improved Kubernetes release processes by standardizing deployment patterns, secure runner standards, controlled branch protections, container image validation, and pipeline checks across environments.
- Created package views, artifact feeds, and upstream repository strategies aligned to application team delivery requirements.
- Administered Kubernetes clusters and deployed applications through pods, deployments, services, and core platform components.
- Migrated Jenkins pipelines to GitLab CI and modernized runner configuration to improve maintainability and pipeline reliability.
- Troubleshoot pipeline, container, and Kubernetes issues in partnership with development teams to accelerate delivery and reduce deployment failures.
- Deployed and administered self-hosted and auto-scaling build agents for Linux and Windows workloads to support high-throughput CI/CD operations.
- Managed Docker image build, provisioning, and runtime administration to standardize containerized delivery workflows.
- Configured agent pools, runner templates, and execution policies to improve build reliability and reduce manual pipeline support.
- Implemented GitLab CI best practices, including reusable templates, pipeline governance, and controlled branch-based execution.
- Enforced SCM best practices and coached development teams on GitLab workflows, branch governance, and merge standards.

Senior DevOps Engineer II | Akamai Technologies

12/2021 - 03/2023

Skills Used: AWS, Linode, Python, Terraform, EKS, GitHub Actions, GitLab

- Built dashboards for CI/CD pipelines, work items, and defect tracking to improve engineering visibility and release governance.
- Established and maintained CI/CD pipelines with Jenkins, Git, Amazon ECR, and Kubernetes for repeatable application delivery.
- Deployed and configured self-hosted runners and build agents for Linux and Windows workloads supporting CI/CD and release automation.
- Drove continuous integration and continuous delivery practices using Git, Maven, Jenkins, Ansible, Docker, Kubernetes, and AWS services.
- Troubleshoot build and release pipeline failures and resolved deployment issues across distributed engineering teams.
- Published versioned artifacts to enterprise repositories and package managers to support downstream engineering consumption and traceability.
- Designed secure VPC networking, Route 53 DNS, security groups, load balancing, VPN connectivity, Direct Connect, and traffic-routing patterns for enterprise workloads.
- Configured deployment groups and environment-specific release targets to streamline controlled production rollouts.
- Provisioned AWS infrastructure using CloudFormation, Terraform, and pipeline-driven infrastructure-as-code deployment patterns.
- Built Docker images and deployed containerized applications to EKS using Helm charts and Kubernetes manifests.
- Integrated delivery tooling with Slack, Microsoft Teams, Jenkins, GitHub, and SonarQube based on engineering and audit requirements.
- Deployed Kubernetes microservices through ArgoCD-based GitOps workflows.
- Implemented GitHub Actions workflows for deploying services to Kubernetes clusters across multiple environments.
- Authored PowerShell and shell automation scripts and published them to shared repositories for consistent reuse across environments.
- Implemented disaster recovery, backup, and observability controls using AWS Elastic Disaster Recovery, AWS Backup, and Amazon CloudWatch.

Senior DevOps Engineer / Senior SRE | Turvo India Pvt Ltd

04/2020 - 12/2021

Skills Used: AWS, Python, Jenkins, GitHub Actions, SonarQube, JFrog, Terraform, Kubernetes, Prometheus, Ansible

- Administered CloudBees Jenkins, JFrog Artifactory, and Xray enterprise tooling for secure software delivery.
- Designed CI/CD pipelines for application and infrastructure deployments across AWS environments.
- Designed and delivered a Terraform and Kubernetes solution for payment-platform deployments, enabling repeatable infrastructure provisioning and container orchestration.
- Developed internal APIs in Python FastAPI to integrate Jenkins, Jira, and JFrog processes with platform automation.
- Developed Jenkins shared libraries to automate image versioning and publish artifacts to private JFrog repositories.
- Created architecture and resource diagrams to support compliance reviews, security sign-offs, and controlled release execution.
- Automated onboarding of new projects to the enterprise DevOps platform through API-driven workflows.
- Implemented MFA, identity access controls, and role-based access management for users and groups across cloud environments.
- Partnered with peers to isolate product defects and participated in retrospectives with development teams and sprint managers to improve release quality.
- Applied platform engineering best practices to improve reliability, scalability, and operational efficiency across shared services.
- Standardized GitHub Actions-based CI/CD patterns to accelerate software delivery and reduce pipeline drift across teams.
- Authored Helm charts to deploy containerized applications consistently across Kubernetes environments.
- Authored and enforced custom policy controls aligned to internal security and governance requirements across AWS accounts.
- Developed custom Prometheus exporters in Python to capture application-specific operational metrics for SRE use cases.
- Built resilient Ansible roles and playbooks to deploy highly available Grafana, Prometheus, and Node Exporter monitoring stacks.

Senior DevOps Engineer | HCL Technologies

02/2019 - 04/2020

Client: Mercedes-Benz Research & Development India

Skills Used: Kubernetes, AWS, Ansible, GitHub, Shell Scripting, Jenkins, Maven, Tomcat, JBoss, Helm

- Represented the DevOps team and presented CI/CD and infrastructure automation strategies for key engineering initiatives, including Model Finder.
- Built Kubernetes environments with pods, deployments, services, and ConfigMaps, and managed Helm-based release packaging for multi-namespace workloads.
- Supported enterprise applications on AWS by troubleshooting CloudWatch, Amazon RDS, load balancing, auto scaling, certificate management, CloudFront, and identity integrations.
- Deployed Kubernetes manifests to on-premises clusters with Helm and standardized release packaging across services.
- Led platform review discussions with stakeholders in Germany to present roadmap enhancements and quarterly DevOps priorities.
- Designed monitoring architecture to collect application, infrastructure, and platform metrics using the ELK stack.
- Built continuous delivery pipelines and supported REST-based microservices deployments across Demo, Test, Pentest, Training, CTDEV, Sandbox, UAT, and PROD environments.
- Worked extensively with AWS infrastructure services including EC2, CloudWatch, Secrets Manager, and managed database platforms for enterprise workloads.
- Automated fleet-level configuration enforcement for Linux and Windows EC2 instances and managed secure access and database connectivity in line with enterprise security standards.
- Served as acting scrum master by managing stories, epics, sprint commitments, and core scrum ceremonies.
- Used CloudFormation and PowerShell scripting to provision and manage cloud resources in a repeatable and auditable manner.
- Planned and executed migration strategies for traditional workloads to AWS using lift-and-shift and modernization approaches.
- Integrated on-premises identity sources with cloud access controls and strengthened security using privileged access, identity protection, and MFA.
- Supported migration of on-premises Windows Server workloads to AWS and validated post-migration configuration through structured cutover and failover testing.
- Tuned scaling policies and service capacity for application and database workloads during on-premises to AWS migration programs.

DevOps Engineer | Mphasis Ltd

08/2016 - 12/2018

Client: HPE

Skills Used: AWS, Chef, Ansible, GitLab, Shell Scripting, Python, Maven, Tomcat, JBoss, Splunk, Nexus

- Created deployment pipelines with Ansible to promote releases from development through production in a controlled, repeatable manner.
- Authored and maintained Terraform modules and executed infrastructure changes through automated CI/CD workflows.
- Built YAML-based build and release pipelines with event-driven triggers to support continuous integration on every code change.
- Defined and implemented branching strategies for Git repositories to improve release governance and code promotion.
- Created CI/CD pipelines for multiple application components across shared delivery platforms.
- Executed Terraform deployments through pipelines and promoted the same artifact set across multiple environments through controlled environment selection.
- Executed AWS proof-of-concepts and delivered solution designs aligned to application and infrastructure requirements.
- Documented build and deployment flows for core infrastructure, API, database, and UI components to improve team consistency.
- Managed variable groups and environment-specific configuration to separate deployments cleanly across stages.
- Authored AWS CLI automation to update service configurations and standardize administrative operations.
- Built and managed self-hosted build agents to support pipeline execution at scale.

EDUCATION

B.Tech (2009-2013) in Information Technology

Prakasam Engineering College, Jawaharlal Nehru Technological University, Kakinada
