**Lead DevOps Engineer with 10+ years of enterprise experience in Cloud Operations, Software as a Service (SaaS) delivery, and production support, with a focus on Microsoft Azure.** Operates cloud-hosted microservices, background processes, and managed services with an emphasis on uptime, scalability, secure releases, and proactive monitoring. Hands-on with **Azure DevOps, GitHub Actions, Azure Monitor, Datadog, Azure Databricks as a managed service, and Python/Bash/PowerShell automation.** Partners with development, product, and security teams on performance, incident response, access controls, vulnerability remediation, and audit evidence supporting SOC 2 and HIPAA initiatives. Healthcare Payer application experience through Mphasis/HPE.

## CERTIFICATIONS

GitLab Certified Associate

Microsoft Certified: Azure Fundamentals

Microsoft Certified: Azure DevOps Engineer Expert

AWS Certified Solutions Architect - Associate

MuleSoft Certified Developer - Level 1

## CLOUD OPERATIONS & SAAS RELIABILITY HIGHLIGHTS

- SaaS Operations:** Health checks, capacity reviews, and recovery runbooks support customer-facing services and background jobs.
- Secure Delivery:** Reusable pipelines connect automated tests, vulnerability checks, controlled approvals, deployment validation, and rollback readiness.
- Operational Visibility:** Dashboards, automated reports, actionable alerts, and audit records make service health and security work visible.

## CORE TECHNOLOGIES

### AZURE CLOUD OPERATIONS

Azure VMs, AKS, App Service, Azure SQL, Storage, Virtual Networks, Key Vault, Entra ID, resource health, scaling, backup and recovery

### MONITORING & REPORTING

Azure Monitor, Application Insights, Log Analytics, Datadog, Prometheus, Grafana, dashboards, alert routing, synthetic checks, service-health reports

### MANAGED DATA SERVICES

Azure Databricks managed service, workspace operations, job monitoring, compute policies, permissions, runtime maintenance, Azure SQL, storage integration

### AUTOMATION & CONFIGURATION

Python, Bash, PowerShell, Azure CLI, Terraform, Ansible, Linux, Windows, Docker, Kubernetes, Helm, operational runbooks

### SAAS INFRASTRUCTURE

Software as a Service (SaaS), microservices, REST APIs, background workers, scheduled jobs, dependency health, release support, availability and capacity

### CI/CD & DEPLOYMENT

Azure DevOps, GitHub Actions, Jenkins, Git, YAML templates, test automation, artifact promotion, security gates, approvals, rollback

### SECURITY & COMPLIANCE SUPPORT

SOC 2, HIPAA, access reviews, RBAC, MFA, least privilege, audit evidence, vulnerability remediation, patch management, encryption and secrets controls

### INCIDENT & TEAM OPERATIONS

Production troubleshooting, root-cause analysis, on-call escalation, change management, recovery validation, developer/product collaboration, Healthcare Payer support

## PROFESSIONAL EXPERIENCE

### Lead DevOps Engineer | AT&T Services Inc.

08/2023 - Present

**Skills Used:** Azure, Cloud Operations, SaaS, Azure DevOps, GitHub Actions, Databricks, Azure Monitor, Datadog, Python

- Led Azure Cloud Operations for SaaS application environments, coordinating uptime, capacity, service health, maintenance, and production support across microservices and background processes.
- Monitored customer-facing APIs, scheduled jobs, and asynchronous workers, investigating failed executions, queue backlogs, dependency timeouts, and recurring application errors before wider service disruption.
- Built Azure Monitor, Application Insights, Log Analytics, and Datadog dashboards to correlate availability, latency, error rates, resource saturation, and deployment events.
- Automated daily service-health and release reports with Python and PowerShell, consolidating failed jobs, incidents, capacity trends, patch status, and outstanding remediation actions.
- Maintained Azure DevOps and GitHub Actions pipelines with automated tests, code and dependency scanning, versioned artifacts, environment approvals, and post-deployment health validation.
- Operated Azure Databricks as a managed service, administering workspace access, compute policies, job schedules, runtime maintenance, storage connectivity, and operational ownership.
- Monitored Databricks job failures, run duration, resource usage, and retry behavior; coordinated diagnostics, safe reruns, and workload optimization with data engineering teams.
- Strengthened access management with Entra ID, MFA, RBAC, managed identities, and Key Vault; supported periodic access reviews and controlled privileged changes.

- Coordinated patching and vulnerability remediation across virtual machines, container images, application dependencies, and managed-service runtime versions, validating service health after maintenance.
- Partnered with security, leadership, and audit contacts to assemble access-review records, release approvals, scan results, patch evidence, and recovery-test records for SOC 2 and HIPAA control reviews.
- Supported secure handling of healthcare-related workloads through restricted log access, secrets separation, encryption settings, retention controls, and approved evidence-sharing procedures.
- Automated Azure provisioning and configuration with Terraform, Ansible, Bash, and Python, reducing repeated manual setup and making environment changes reviewable.
- Validated backups, restoration procedures, and rollback runbooks; coordinated incident response and root-cause reviews with developers and product leaders to prioritize recurring reliability issues.

## Senior DevOps Engineer | GlobalLogic

03/2023 - 08/2023

**Skills Used:** Azure, Cloud Operations, SaaS, Azure DevOps, GitHub Actions, Ansible, Azure Monitor, Python

- Supported Cloud Operations for Azure-hosted SaaS services, performing daily health checks, release support, incident triage, and environment maintenance.
- Maintained CI/CD templates for application builds, automated tests, artifact promotion, approvals, and deployment verification across SaaS environments.
- Configured service dashboards and alerts for application errors, resource pressure, and failed background jobs, documenting ownership and escalation paths.
- Automated configuration and operational checks with Ansible and Python, validating application settings, service startup, credentials, and connectivity.
- Applied access restrictions and security checks to build agents and deployment workflows and coordinated patch and vulnerability follow-up with engineering teams.
- Worked with developers and QA to resolve failed releases, improve smoke tests, and maintain rollback and service-support procedures.

## Senior DevOps Engineer II | Akamai Technologies

12/2021 - 03/2023

**Skills Used:** Azure, Cloud Operations, SaaS, Terraform, Jenkins, GitHub Actions, Databricks, Azure Monitor

- Managed cloud infrastructure and production support for Azure-oriented SaaS application environments, monitoring service availability, capacity, and dependency health.
- Provisioned repeatable environments with Terraform and pipeline-driven changes, maintaining consistent network, identity, compute, and monitoring configuration.
- Built Jenkins and GitHub Actions delivery workflows for SaaS microservices with controlled artifact promotion, approvals, and post-release checks.
- Supported Azure Databricks managed-service operations, investigating scheduled-job failures, compute startup issues, workspace permissions, and storage access with data teams.
- Implemented dashboards, centralized logs, and alerts for workload failures and performance degradation and automated diagnostics with Python and PowerShell.
- Maintained backup checks, recovery documentation, and patch procedures and coordinated incidents and release windows across distributed engineering teams.

## Senior DevOps Engineer / Senior SRE | Turvo India Pvt Ltd

04/2020 - 12/2021

**Skills Used:** Azure, Cloud Operations, SaaS, Jenkins, Ansible, Prometheus, Grafana, Python

- Supported Cloud Operations and reliability for SaaS application services, coordinating release health, incident response, and operational improvements with development teams.
- Standardized Jenkins and GitHub Actions pipelines for software and infrastructure releases, maintaining artifact traceability, health gates, and recovery readiness.
- Developed Ansible roles for Prometheus, Grafana, and Node Exporter and Python exporters that exposed application-specific availability and performance signals.
- Built internal FastAPI automation linking Jenkins, Jira, and JFrog for onboarding, deployment status, and recurring SaaS support activities.
- Investigated application, container, and infrastructure incidents through logs and metrics, translating recurring failures into actionable alerts and runbooks.
- Collaborated with developers and product stakeholders on release readiness, capacity concerns, maintenance schedules, and reliability priorities.

## Senior DevOps Engineer | HCL Technologies

02/2019 - 04/2020

**Client:** Mercedes-Benz Research & Development India

**Skills Used:** Azure, Cloud Operations, SaaS, Jenkins, Ansible, PowerShell, Linux, Monitoring

- Supported cloud-hosted application and SaaS delivery environments, managing service configuration, release execution, environment readiness, and operational handover.
- Built Jenkins pipelines for Java applications and REST services, integrating build validation, versioned packages, controlled promotion, and smoke tests.
- Automated Azure application-host configuration with Ansible and PowerShell, validating permissions, runtime dependencies, credentials, and service connectivity.
- Implemented centralized logging and health checks and investigated application-server failures, certificates, database connectivity, and resource bottlenecks.
- Coordinated patch windows, release approvals, incident updates, and recovery procedures with customer stakeholders and distributed support teams.

## DevOps Engineer | Mphasis Ltd

08/2016 - 12/2018

**Client:** HPE

**Skills Used:** Azure, Cloud Operations, SaaS, Ansible, Linux, Python, Shell, Healthcare Payer

- Supported Cloud Operations and SaaS application delivery for Healthcare Payer enrollment, eligibility, and claims services within the Mphasis/HPE engagement.
- Performed application and batch-service health checks, investigated failed jobs and missing files, and coordinated approved recovery with support teams.
- Created Ansible, Shell, and Python automation for installation, configuration updates, service control, and post-deployment verification.
- Supported secure Linux operations through permission reviews, controlled credentials, log-access restrictions, and scheduled maintenance checks.
- Coordinated release sequencing, smoke tests, defect follow-up, and operational handover with development, QA, and healthcare application support teams.

## EDUCATION

### B.Tech (2009-2013) in Information Technology

Prakasam Engineering College, Jawaharlal Nehru Technological University, Kakinada
