rajendranelakurthi.github.io

**Lead DevOps Engineer with 10+ years of enterprise experience in CI/CD, application deployments, middleware operations, and production support.** Designs and administers **GitHub Actions YAML workflows, GitHub Enterprise Cloud (GHEC), Jenkins, and Azure DevOps** delivery platforms. Hands-on focus on **JBoss EAP 7.4/8.1 and WebLogic 12c/14c** configuration, administration, maintenance, and automated releases. Uses **Unix/Linux, Bash, Python, PowerShell**, and **Ansible** to standardize environments, troubleshoot application-server issues, and coordinate reliable production changes across development, QA, and operations teams.

## CERTIFICATIONS

GitLab Certified Associate

Microsoft Certified: Azure Fundamentals

Microsoft Certified: Azure DevOps Engineer Expert

AWS Certified Solutions Architect - Associate

MuleSoft Certified Developer - Level 1

## WORKFLOW AUTOMATION & MIDDLEWARE HIGHLIGHTS

- GitHub Actions & GHEC:** Reusable YAML workflows, runner governance, protected environments, and versioned artifacts standardize enterprise delivery.
- Middleware Operations:** JBoss and WebLogic configuration, deployment automation, patch planning, and JVM diagnostics support stable application services.
- Release Reliability:** Approval gates, health checks, recovery procedures, and cross-team coordination connect automated pipelines to production readiness.

## CORE TECHNOLOGIES

### GITHUB ACTIONS & YAML

Reusable workflows, workflow\_call, workflow\_dispatch, composite actions, job dependencies, matrices, concurrency, caching, artifacts, workflow troubleshooting

### GITHUB ENTERPRISE CLOUD

GHEC, organizations, teams, repository access, branch protection, CODEOWNERS, runner groups, Actions policies, environments, OIDC, secrets and variables

### CI/CD & AZURE DEVOPS

Jenkins, Jenkinsfiles, shared libraries, Azure Pipelines, YAML templates, agent pools, service connections, Azure Artifacts, approvals and release promotion

### JBOSS ADMINISTRATION

JBoss EAP 7.4 / 8.1, standalone and managed domains, management CLI, profiles, server groups, JDBC datasources, Elytron, WAR/EAR deployment, patching

### WEBLOGIC ADMINISTRATION

WebLogic 12c / 14c, domains, Admin/Managed Servers, Node Manager, clusters, JDBC/JMS resources, WLST, deployment plans, patch maintenance

### SCRIPTING & PLATFORMS

Unix, Linux, Windows, Shell/Bash, Python, PowerShell, Ansible, Maven, Git, JSON, Azure VMs, Key Vault, Terraform, Docker, AKS

### TROUBLESHOOTING & SECURITY

JVM heap and GC analysis, thread dumps, connection pools, SSL/TLS, logs, SonarQube, dependency scans, least privilege, Azure Monitor, Splunk

### RELEASE MANAGEMENT & OPERATIONS

Change approvals, release calendars, cutover runbooks, smoke tests, rollback, incident response, root-cause analysis; Healthcare Payer application support

## PROFESSIONAL EXPERIENCE

### Lead DevOps Engineer | AT&T Services Inc.

08/2023 - Present

**Skills Used:** GitHub Actions, GHEC, Azure DevOps, Jenkins, JBoss EAP 7.4/8.1, WebLogic 12c/14c, Bash, Python, Ansible

- Led GitHub Actions and Azure DevOps delivery automation for enterprise applications, aligning repository workflows, middleware deployments, and production change controls with engineering teams.
- Designed reusable YAML workflows with workflow\_call, typed inputs, explicit secrets, outputs, and versioned references so application teams could adopt shared build and deployment patterns.
- Created composite actions for repeated setup and validation steps; configured job dependencies, conditional execution, matrix builds, timeouts, and concurrency controls for predictable pipeline behavior.
- Implemented pull-request, branch, tag, scheduled, and manual triggers; standardized dependency caching, test-result publication, build summaries, artifact retention, and release-package checksums.
- Administered GHEC organizations, teams, repository access, CODEOWNERS, protected branches, and Actions policies; applied least-privilege workflow tokens and reviewed third-party action references.
- Managed self-hosted Linux and Windows runners, runner groups, labels, toolchains, proxy access, workspace cleanup, and capacity monitoring; isolated privileged deployment workloads.
- Configured protected deployment environments, reviewer approvals, scoped variables and secrets, and GitHub-to-Azure OIDC federation to support controlled cloud access and production promotion.
- Migrated Jenkins and ADO delivery stages into reusable GitHub Actions workflows, validating build parity, artifact naming, approval behavior, deployment checks, and recovery procedures.

- Installed and administered JBoss EAP 7.4 and 8.1 in standalone and managed-domain modes, maintaining profiles, server groups, JVM settings, socket bindings, and environment-specific configuration.
- Configured JBoss JDBC drivers and datasources, pool validation, Elytron security, TLS, and logging; diagnosed connection failures, classloading issues, memory pressure, and application startup errors.
- Automated JBoss WAR/EAR deployments with management CLI, Ansible, and pipeline jobs, coordinating traffic draining, staged restarts, health verification, and restoration of prior application versions.
- Planned JBoss maintenance and 7.4-to-8.1 migration activities with developers, assessing JDK and Jakarta compatibility, configuration changes, extension dependencies, and regression-test readiness.
- Supported WebLogic 12c/14c domains, Admin/Managed Servers, Node Manager, clusters, JDBC/JMS resources, and WLST deployments; coordinated patches, configuration backups, and recovery checks.
- Developed Bash, Python, and PowerShell diagnostics for release validation and incident response; led change reviews and troubleshooting using logs, thread dumps, GC behavior, and service-health evidence.

## Senior DevOps Engineer | GlobalLogic

03/2023 - 08/2023

**Skills Used:** Azure DevOps, GitHub Actions, GHEC, Jenkins, Linux, Python, Ansible, JBoss

- Built GitHub Actions and ADO YAML templates for Maven builds, automated tests, quality analysis, artifact publication, and controlled deployment stages.
- Configured reusable workflow inputs, repository variables, deployment secrets, and approval gates to separate development, test, and production delivery.
- Supported GHEC repository onboarding, branch protections, pull-request checks, and runner access with application teams.
- Maintained Linux and Windows build agents and investigated checkout, dependency, permissions, network, and workflow-expression failures.
- Automated JBoss application configuration and deployments with Ansible and shell scripts, validating datasources, service startup, and endpoint health.
- Partnered with developers and QA on release readiness, failed-build analysis, smoke tests, and documented rollback procedures.

## Senior DevOps Engineer II | Akamai Technologies

12/2021 - 03/2023

**Skills Used:** Azure, GitHub Actions, Jenkins, Python, PowerShell, JBoss EAP 7.4, WebLogic 14c

- Developed GitHub Actions workflows for application builds, infrastructure validation, artifact publication, and approved multi-environment deployments.
- Standardized job dependencies, reusable build steps, caching, and automated status reporting to improve workflow consistency across repositories.
- Automated Azure environment configuration and operational checks with Terraform, Ansible, PowerShell, and Python.
- Supported JBoss EAP 7.4 and WebLogic 14c releases, maintaining application settings, JDBC connectivity, deployment packages, and service verification.
- Troubleshot Unix/Linux process failures, JVM resource pressure, certificate issues, and middleware connectivity using logs and diagnostic scripts.
- Maintained release runbooks, backup checks, and recovery procedures and coordinated deployment windows with distributed engineering teams.

## Senior DevOps Engineer / Senior SRE | Turvo India Pvt Ltd

04/2020 - 12/2021

**Skills Used:** Azure, GitHub Actions, Jenkins, Python, Bash, Ansible, Prometheus, Grafana

- Standardized GitHub Actions and Jenkins workflows for application and infrastructure delivery using shared build, test, and deployment patterns.
- Built Jenkins shared libraries for artifact versioning, package publication, environment selection, and repeatable release execution.
- Developed Python FastAPI integrations across Jenkins, Jira, and JFrog for project onboarding, deployment status, and operational requests.
- Automated Linux service configuration and monitoring-stack deployment with Ansible, shell scripts, Prometheus, and Grafana.
- Investigated production application and pipeline incidents, correlating logs and resource metrics with recent releases and coordinating service restoration.
- Worked with developers and support teams on change readiness, rollback decisions, runbook improvements, and post-incident reviews.

## Senior DevOps Engineer | HCL Technologies

02/2019 - 04/2020

**Client:** Mercedes-Benz Research & Development India

**Skills Used:** Azure, Jenkins, Git, Ansible, Shell, WebLogic 12c, JBoss, Maven

- Built Jenkins pipelines for Java applications and REST services across development, test, UAT, and production environments.
- Administered JBoss and WebLogic 12c application configurations, managing JVM options, JDBC resources, service accounts, and environment properties.
- Automated Maven package promotion and WAR/EAR deployment through Ansible, shell scripts, management CLI, and controlled release procedures.
- Supported middleware maintenance through configuration backups, patch prechecks, service restarts, and post-change application validation.
- Diagnosed deployment failures, blocked threads, database connection errors, TLS problems, and Unix permissions with development and infrastructure teams.
- Coordinated release plans, change approvals, customer updates, and rollback readiness across distributed application teams.

## DevOps Engineer | Mphasis Ltd

08/2016 - 12/2018

**Client:** HPE

**Skills Used:** Azure, Jenkins, Git, Ansible, Linux, Shell, Python, JBoss, Healthcare Payer

- Supported Healthcare Payer enrollment, eligibility, and claims application deployments in the Mphasis/HPE engagement using repeatable release procedures.
- Created Ansible and shell automation for application installation, JBoss configuration updates, service controls, and deployment verification.
- Maintained Linux application servers and supported JBoss package deployments, datasource connectivity checks, log inspection, and batch-job troubleshooting.
- Managed Git branching, release tags, and versioned artifacts and documented deployment sequencing for application, API, database, and UI components.
- Worked with development, QA, and support teams on release windows, smoke tests, incident follow-up, and operational handover.

## EDUCATION

### B.Tech (2009-2013) in Information Technology

Prakasam Engineering College, Jawaharlal Nehru Technological University, Kakinada
