rajendranelakurthi.github.io

Senior Azure DevOps & Platform Engineer with 10+ years of experience in cloud infrastructure, SaaS delivery, and production operations. Builds secure, highly available **Azure platforms with Terraform/Bicep, AKS, Docker, Helm, and Argo CD GitOps.** Automates CI/CD and operational tooling with Python, Bash, and PowerShell; improves reliability through observability, incident response, capacity planning, and cost optimization. Combines Azure and AWS platform experience with microservices delivery, identity controls, relational database operations, and cross-team engineering mentorship.

CERTIFICATIONS

Microsoft Certified: Azure DevOps Engineer Expert

Microsoft Certified: Azure Fundamentals

GitLab Certified Associate

MuleSoft Certified Developer - Level 1

SAAS PLATFORM ENGINEERING HIGHLIGHTS

- Automation & Enablement** Built reusable delivery pipelines and Python operational integrations; published platform runbooks and coached engineers on secure cloud-native delivery.
- Reliability & Observability** Correlated Azure Monitor, Application Insights, Prometheus, Grafana, and CloudWatch telemetry to troubleshoot incidents and guide capacity and scaling decisions.
- Kubernetes & GitOps** Standardized AKS/EKS deployments with Helm and Argo CD, using reviewed Git changes, health validation, and controlled reconciliation for repeatable releases.

CORE TECHNOLOGIES

AUTOMATION, DATA & ENABLEMENT

Python, Bash, PowerShell, Linux, REST APIs, FastAPI, SQL, relational database connectivity, Java/Maven delivery, runbooks, mentoring, developer self-service

OBSERVABILITY & PRODUCTION OPERATIONS

Azure Monitor, Log Analytics, Application Insights, Prometheus, Grafana, ELK, CloudWatch, dashboards, alerting, on-call support, incident response, root cause analysis

NETWORKING, SECURITY & IDENTITY

Entra ID, Azure RBAC, managed identities, Key Vault, AWS IAM, network policies, TLS, secrets protection, vulnerability scanning; Keycloak/OIDC concepts

INFRASTRUCTURE & DELIVERY AUTOMATION

Terraform modules, Bicep, ARM templates, Azure CLI, Azure DevOps YAML, Git policies, artifact promotion, security gates, CloudFormation, Jenkins

AZURE INFRASTRUCTURE & AVAILABILITY

AKS, virtual networks, NSGs, private endpoints, Azure Storage, Azure SQL Database, Key Vault, availability zones, resilient deployment patterns, capacity planning

KUBERNETES & GITOPS

Docker, AKS/EKS, Helm, Argo CD, GitOps reconciliation, drift correction, health checks, rolling updates, pod disruption budgets, HPA, cluster autoscaling

AWS PLATFORM ENGINEERING

EKS/ECS, Lambda, API Gateway, VPC, S3, RDS, CloudWatch, IAM, SNS/SQS, Terraform/CloudFormation, resource rightsizing and cost governance

PROFESSIONAL EXPERIENCE

Lead Azure DevOps Engineer | AT&T Services Inc.

08/2023 - Present

Skills Used: Azure, Terraform, Bicep, AKS/EKS, Argo CD, Helm, Azure DevOps, Prometheus/Grafana, AWS, Python

- Mentored engineers on Terraform, GitOps, and troubleshooting; partnered with Engineering, Product, Security, and Platform teams on service readiness and developer workflows.
- Developed Python, Bash, and PowerShell tooling for deployment checks and operational diagnostics; supported on-call incident response, root cause analysis, and runbooks.
- Secured microservices with Entra ID, managed identities, Key Vault, AWS IAM, and Kubernetes network controls; partnered with Security on vulnerability remediation.
- Engineered secure Azure SaaS infrastructure with Terraform and Bicep, standardizing networks, private endpoints, storage, and AKS configuration across environments.
- Operated AKS and AWS EKS platforms with Helm and Argo CD GitOps; controlled manifest promotion, drift correction, and deployment health through reviewed Git changes.
- Implemented Azure Monitor, Application Insights, Prometheus/Grafana, and CloudWatch dashboards and alerts to track platform health and diagnose incidents.
- Built reusable Azure DevOps pipelines for container builds, automated tests, image scanning, IaC validation, and gated deployment to Azure and AWS workloads.
- Tuned pod resource requests, HPA settings, and node autoscaling against workload demand; reviewed Azure/AWS utilization to improve capacity and control cost.
- Improved AKS availability with zone-aware node pools, pod disruption budgets, readiness checks, and rolling-update safeguards; validated recovery procedures.

Senior DevOps Engineer | GlobalLogic

03/2023 - 08/2023

Skills Used: Azure DevOps, Git, PowerShell, Build Agents, AWS, Terraform, CloudFormation, ECS, CloudWatch

- Published reusable onboarding workflows and runbooks for Azure/AWS delivery, helping teams adopt shared pipelines and manage platform transitions.
- Built reusable Azure DevOps stages for compilation, automated tests, artifact publication, and release approvals across development, QA, and production.
- Automated Linux agent configuration and deployment diagnostics with Bash and PowerShell, reducing recurring setup work for development teams.

- Provisioned AWS platform resources with Terraform and CloudFormation, managing S3 artifacts, IAM deployment permissions, and environment-specific parameters.
- Strengthened release controls with Git branch protections, secure runner configuration, artifact validation, and documented troubleshooting procedures for engineering handoffs.
- Coordinated release dependencies and readiness checks with developers and QA, tracking blockers through corrective action and verified handoff.
- Maintained AKS and AWS ECS deployment configuration, validating container health, environment settings, and protected inputs before release promotion.
- Maintained Azure Repos pull-request validation and release approvals, connecting source changes to versioned build outputs and deployment evidence.
- Administered Linux and Windows build agents, managing services, permissions, tool dependencies, disk capacity, and network connectivity; resolved pipeline and credential failures.

Senior DevOps Engineer II | Akamai Technologies

12/2021 - 03/2023

Skills Used: Azure, Terraform, AKS, Python, Azure Monitor, AWS, EKS, Lambda, API Gateway, CloudWatch

- Developed Python and PowerShell utilities for release checks and recurring operational tasks, publishing reusable automation for consistent execution across environments.
- Provisioned Azure AKS and AWS EKS with Terraform; managed Helm and Argo CD deployments with versioned configuration and controlled GitOps reconciliation.
- Managed Azure Storage and AWS S3-backed Terraform state, environment configuration, and infrastructure plan reviews across release stages.
- Supported Azure API Management, Service Bus, and AWS Lambda/API Gateway integrations, validating identity, connectivity, and deployment dependencies.
- Reviewed AWS resource utilization and storage lifecycle settings with platform teams; supported rightsizing, tagging, and cost-governance improvements.
- Improved Kubernetes performance through resource diagnostics and scaling reviews; investigated application latency, node pressure, and network connectivity.
- Automated Azure application delivery with pipeline checks, versioned artifacts, environment-specific configuration, and post-deployment verification.
- Correlated Azure Monitor, Log Analytics, and CloudWatch telemetry to isolate cloud service failures; tuned alerts and verified corrective actions.
- Published release runbooks and troubleshooting guidance for distributed teams, capturing verification results and operational handoff requirements.

Senior DevOps Engineer / Senior SRE | Turvo India Pvt Ltd

04/2020 - 12/2021

Skills Used: Azure, Jenkins, FastAPI, JFrog, Terraform, AKS, Prometheus, AWS, EKS, RDS, SNS/SQS, CloudWatch

- Delivered CI/CD automation for SaaS and payment-platform workloads, aligning application releases, database dependencies, and Azure infrastructure changes.
- Built Terraform modules for Azure networking/AKS and AWS VPC/EKS, providing repeatable platform provisioning for SaaS and payment workloads.
- Participated in on-call support for SaaS workloads, using CloudWatch logs and alarms to investigate AWS incidents and document root causes and recovery actions.
- Secured Azure/AWS pipeline credentials with Key Vault and IAM-based access; separated environment permissions and protected production deployment inputs.
- Used Prometheus/Grafana to diagnose Kubernetes capacity and service issues; automated Linux recovery tasks with Ansible and Bash during production support.
- Supported AWS RDS and Azure SQL Database release dependencies, validating SQL connectivity, database readiness, and application recovery procedures.
- Developed Python FastAPI integrations for Jenkins, Jira, and JFrog to automate project onboarding and reduce manual release coordination.
- Integrated SonarQube quality checks, JFrog Xray artifact scanning, and secure secrets handling into delivery workflows; preserved validation results for release reviews.
- Administered CloudBees Jenkins, JFrog Artifactory, and Xray and maintained shared libraries for consistent artifact versioning.

Senior DevOps Engineer | HCL Technologies

02/2019 - 04/2020

Client: Mercedes-Benz Research & Development India

Skills Used: Azure, Jenkins, ARM templates, Ansible, PowerShell, Helm, AWS, Terraform, CloudFormation, IAM, CloudWatch

- Built Jenkins and Maven pipelines for Java REST microservices, integrating automated tests, security validation, and controlled promotion across UAT and production.
- Packaged Kubernetes services with Helm Charts, maintaining environment values, release versions, readiness checks, and deployment recovery procedures across Azure-hosted environments.
- Automated Azure infrastructure with ARM templates and AWS VPC, EC2, and S3 resources with Terraform/CloudFormation; configured Linux hosts using Ansible.
- Maintained AWS platform deployment parameters and CloudFormation update procedures, documenting validation, rollback, and production handoffs.
- Managed Azure Key Vault and AWS IAM deployment access, securing application credentials, database connectivity, and environment permissions.
- Investigated Azure and AWS deployment failures with ELK, Azure Monitor, and CloudWatch; coordinated fixes and verified restored application behavior.
- Maintained version-controlled environment parameters and deployment scripts to keep Azure application configuration consistent across release stages.
- Coordinated release configuration, application checks, and deployment verification with developers and QA before environment promotion.
- Documented deployment sequences, troubleshooting steps, and recovery procedures to support repeatable release execution and team knowledge transfer.

DevOps Engineer | Mphasis Ltd

08/2016 - 12/2018

Client: HPE

Skills Used: Azure, Git, Terraform, ARM templates, Ansible, Python, AWS, CloudFormation, EC2, S3, RDS, IAM

- Troubleshot Azure/AWS release failures using build logs and CloudWatch metrics, isolating configuration, permission, and infrastructure issues.
- Created repeatable build and deployment pipelines for API, database, and UI components, promoting consistent artifacts across environments.
- Developed Python and PowerShell scripts for recurring deployment and administration tasks, reducing manual release preparation.
- Provisioned Azure resources with Terraform/ARM and AWS EC2, VPC, S3, and RDS with Terraform/CloudFormation, standardizing repeatable environment setup.
- Maintained AWS IAM roles, security groups, and environment parameters for controlled application access and automated platform deployments.
- Documented AWS provisioning and operational runbooks; coordinated infrastructure readiness, deployment scheduling, and verified support handoffs.
- Maintained Git branching practices and build-agent configuration to support controlled code integration and repeatable builds.
- Collected build logs and deployment verification results for release handovers, helping support teams trace failures to configuration or package changes.
- Validated release packages and artifact versions before environment promotion, checking required configuration and deployment inputs.

EDUCATION

B.Tech (2009-2013) in Information Technology

Prakasam Engineering College, Jawaharlal Nehru Technological University, Kakinada
