rajendranelakurthi.github.io

Engineer-leader with 10+ years of enterprise DevOps, cloud engineering, release management, and production operations experience. Builds secure, repeatable delivery across **pipelines, environments, secrets and access, security controls, observability, and recovery.** Combines Azure and AWS infrastructure automation with code-review governance, security scanning, application release validation, and Kubernetes operations. Coordinates competing delivery dependencies, change windows, and production readiness across engineering teams, with a focus on traceable changes, controlled access, and reliable releases for enterprise and payment-platform workloads.

CERTIFICATIONS

GitLab Certified Associate

Microsoft Certified: Azure Fundamentals

Microsoft Certified: Azure DevOps Engineer Expert

AWS Certified Solutions Architect - Associate

MuleSoft Certified Developer - Level 1

DEVSECOPS LEADERSHIP HIGHLIGHTS

- **Secure Path to Production** Standardized reusable pipelines, reviewed changes, versioned artifacts, security checks, environment approvals, and deployment verification.
- **Environment & Release Coordination** Aligned team dependencies, change windows, environment configuration, and recovery plans across application, database, and infrastructure releases.
- **Security & Operations** Combined secrets controls, identity governance, monitoring, incident response, and runbooks to support secure production delivery.

CORE TECHNOLOGIES

SECURE CI/CD & CODE CONTROLS

GitHub Actions, Azure DevOps, Jenkins, GitLab CI, Harness; branch protection, required reviews, reusable workflows, approval gates

CODE & DEPENDENCY SECURITY

SonarQube, Fortify, Black Duck, JFrog Xray; static analysis, dependency scanning, artifact checks, security validation

APPLICATION & RELEASE SECURITY

Container image validation, REST microservices, security-test environments, smoke tests, controlled promotion, Liquibase migration validation

SECRETS & IDENTITY

Azure Key Vault, AWS Secrets Manager, Entra ID, IAM, RBAC, MFA, federated pipeline authentication, least-privilege deployment access

INFRASTRUCTURE & PLATFORM CONTROLS

Terraform, CloudFormation, ARM templates, Ansible, AKS/EKS, Kubernetes, Helm, private networking, security groups, policy checks

ENVIRONMENT & CHANGE MANAGEMENT

Development, QA, security testing, UAT, production; environment configuration, release dependencies, change windows, versioned artifacts

OBSERVABILITY & PRODUCTION OPERATIONS

Azure Monitor, CloudWatch, CloudTrail, Prometheus, Grafana, Splunk, ELK; incident diagnosis, backup, recovery, operational runbooks

AUTOMATION & DELIVERY TOOLING

Python, Bash, PowerShell, AWS/Azure CLI, Git, Docker, JFrog Artifactory, Jira, FastAPI, SQL, Linux and Windows build agents

PROFESSIONAL EXPERIENCE

Lead DevOps Engineer | AT&T Services Inc.

08/2023 - Present

Skills Used: Azure, AWS, GitHub Actions, Azure DevOps, Harness, Terraform, Key Vault, Kubernetes, Python

- Led application, database, and infrastructure release coordination across engineering teams, aligning dependencies, change windows, approvals, and production readiness.
- Built reusable GitHub Actions and Azure DevOps pipelines with automated validation, versioned artifacts, environment approvals, deployment checks, and recovery planning.
- Established branch protections, required reviews, merge controls, and artifact versioning to keep code changes and production promotions traceable to approved releases.
- Integrated DevSecOps controls into delivery workflows through secure secrets handling, Terraform validation, pre-deployment policy checks, and application release verification.
- Provisioned cloud infrastructure with Terraform and integrated Key Vault, federated pipeline authentication, and controlled deployment access to reduce credential exposure.
- Implemented private service connectivity and environment isolation using private endpoints, cloud networking controls, and identity-based access for application workloads.
- Managed environment-specific configuration and coordinated release sequencing across development, QA, and production to address shared dependencies and delivery risks.
- Automated pre-deployment checks, database connectivity validation, deployment summaries, and post-release smoke tests with Python, Bash, and PowerShell.
- Validated version-controlled database migrations and generated SQL before promotion, coordinating application compatibility, permissions, and recovery with service owners.
- Configured Harness delivery workflows with reusable templates, approval gates, deployment health checks, failure handling, and rollback steps for Kubernetes applications.
- Coordinated production incident response and release support, using deployment logs and cloud monitoring to diagnose failures and guide service restoration.
- Authored deployment guides, architecture documentation, and operational runbooks to improve support readiness, release handover, and knowledge transfer.

Senior DevOps Engineer | GlobalLogic

03/2023 - 08/2023

Skills Used: GitLab CI, Jenkins, Git, Docker, Kubernetes, Linux

- Standardized reusable CI/CD stages, build-agent configuration, environment settings, and release checks with development and QA teams.
- Migrated Jenkins pipelines to GitLab CI and enforced branch protection, secure runner practices, container image validation, and controlled pipeline execution.
- Administered Linux and Windows build agents, Docker delivery workflows, and Kubernetes deployments; diagnosed credential, pipeline, and runtime failures.
- Maintained separate development, QA, and production configuration and used reviewed deployment stages to protect application and database releases.
- Partnered with developers to investigate deployment defects, strengthen release checks, and document repeatable remediation procedures.

Senior DevOps Engineer II | Akamai Technologies

12/2021 - 03/2023

Skills Used: AWS, Terraform, GitHub Actions, EKS, SonarQube, CloudWatch

- Provisioned cloud infrastructure with Terraform and pipeline-driven deployment patterns, supporting repeatable configuration and controlled environment changes.
- Built CI/CD workflows with GitHub Actions and Jenkins, publishing versioned artifacts and integrating SonarQube with engineering delivery tooling.
- Deployed containerized microservices with Helm, Kubernetes, and ArgoCD, supporting consistent configuration and release promotion across environments.
- Implemented secure VPC networking, security groups, private connectivity, DNS, and load balancing for enterprise application workloads.
- Implemented CloudWatch observability, AWS Backup, and disaster-recovery controls; troubleshooted infrastructure and deployment issues across distributed teams.

Senior DevOps Engineer / Senior SRE | Turvo India Pvt Ltd

04/2020 - 12/2021

Skills Used: Jenkins, SonarQube, JFrog Xray, Terraform, Python, Prometheus, Ansible

- Delivered CI/CD and Terraform automation for payment-platform workloads, aligning application releases, infrastructure changes, and operational readiness.
- Integrated SonarQube and secure secrets handling into reusable Jenkins and GitHub Actions workflows for build, test, artifact publication, and promotion.
- Administered CloudBees Jenkins, JFrog Artifactory, and Xray to support controlled artifact delivery and dependency-security workflows.
- Applied identity controls, MFA, role-based access, and custom policy checks across cloud environments to strengthen platform governance.
- Developed Python FastAPI integrations for Jenkins, Jira, and JFrog and built Prometheus exporters and Ansible-managed monitoring stacks for operational diagnosis.

Senior DevOps Engineer | HCL Technologies

02/2019 - 04/2020

Client: Mercedes-Benz Research & Development India

Skills Used: Jenkins, Kubernetes, Ansible, PowerShell, ELK

- Built continuous delivery pipelines for REST microservices across development, security-validation, UAT, and production environments.
- Coordinated release configuration and verification with engineering teams and supported deployment troubleshooting across shared enterprise environments.
- Automated Linux and Windows cloud configuration and secure application/database connectivity using infrastructure templates, Ansible, and PowerShell.
- Supported identity integration, privileged access, MFA, Kubernetes release packaging, and monitoring through ELK and cloud-native tooling.

DevOps Engineer | Mphasis Ltd

08/2016 - 12/2018

Client: HPE

Skills Used: Terraform, Ansible, Git, Python, Shell

- Created repeatable deployment pipelines with Ansible and Terraform and promoted consistent artifacts from development through production.
- Implemented Git branching practices, environment-specific configuration, and controlled release parameters to improve deployment traceability.
- Automated administrative and deployment tasks with Python, shell scripting, and cloud CLI workflows; maintained build agents and support documentation.

EDUCATION

B.Tech (2009-2013) in Information Technology

Prakasam Engineering College, Jawaharlal Nehru Technological University, Kakinada
