rajendranlakurthi.github.io

Lead Platform Engineer with 10+ years of experience in cloud infrastructure, developer enablement, and production reliability. Builds Azure landing-zone foundations, modular Terraform, GitHub Actions golden paths, and AKS/GitOps delivery. Automates provisioning and operations with PowerShell, Python, and Bash; integrates policy, managed identities, Key Vault, and security validation into platform workflows. Improves service visibility with Azure Monitor, Log Analytics, and Application Insights while supporting resilient application, data, and AI/ML infrastructure, cost governance, and engineering collaboration.

CERTIFICATIONS

GitLab Certified Associate

Microsoft Certified: Azure Fundamentals

Microsoft Certified: Azure DevOps Engineer Expert

AWS Certified Solutions Architect - Associate

MuleSoft Certified Developer - Level 1

KEY PLATFORM ACHIEVEMENTS

- Azure Platform Foundations** Standardized Terraform modules and platform configuration for Azure networking, identity, secrets, compute, and Kubernetes delivery.
- GitHub Golden Paths** Built reusable workflows, protected release environments, and artifact promotion patterns to support consistent developer delivery.
- Secure & Reliable Operations** Integrated security validation, Azure telemetry, incident runbooks, and infrastructure reviews into shared platform workflows.

CORE TECHNOLOGIES

AZURE LANDING ZONES & IAC

Terraform modules, Azure Storage remote state, state locking, plan reviews, Azure Policy, managed identities, Key Vault, GitOps; env zero governance concepts; legacy Blueprints and deployment-stack migration concepts

CONTAINERS, NETWORKING & GITOPS

Docker, AKS, ACR, Helm, Argo CD; hub/spoke, Private Link, VNET integration, DNS, TLS/certificates; WAF, Application Gateway, Firewall, ExpressRoute/VPN concepts

OBSERVABILITY, RELIABILITY & COST

Azure Monitor, Log Analytics/KQL, Application Insights, alerts/dashboards, blameless postmortems, runbooks, autoscaling, resiliency testing; chaos experiment design, tags, budgets, rightsizing

GOVERNANCE & ENGINEERING LEADERSHIP

Design/PR reviews, roadmap planning, tool evaluations, mentoring, documentation, audit evidence; healthcare security knowledge: HIPAA/HITRUST control concepts, PHI handling, access restrictions and data governance

GITHUB & DEVELOPER PRODUCTIVITY

GitHub Actions reusable YAML workflows, repositories, Packages/GHCR, artifacts, Environments, approvals, protected branches, CODEOWNERS, OIDC, golden paths for application/data/ML delivery

DEVSECOPS & SUPPLY CHAIN

SAST/DAST, secret/container/IaC scanning, GitHub Advanced Security, CodeQL, Dependabot, SBOM, OPA/Conftest, policy-as-code, admission controls; Defender for Cloud and Cosign signing concepts

AUTOMATION, AI & DATA PLATFORMS

PowerShell, Python, Bash, Ansible, REST APIs; Kubernetes infrastructure for Milvus and GPU services; Azure ML/OpenAI, model registries, feature stores, prompt guardrails, Databricks, Synapse, Purview, Event Hubs/Service Bus concepts

PROFESSIONAL EXPERIENCE

Lead SRE | AT&T Services Inc.

08/2023 - Present

Skills Used: Azure, Terraform, GitHub Actions, AKS, Azure Policy, Key Vault, Managed Identities, Azure Monitor, AWS

- Built Azure landing-zone foundations with modular Terraform for networking, identity, storage, and AKS, standardizing parameters and reviewed infrastructure changes.
- Managed Terraform remote state in Azure Storage with state locking and environment isolation; integrated policy checks and approval gates into infrastructure delivery.
- Developed reusable GitHub Actions workflows for application and infrastructure releases, combining tests, artifact promotion, protected Environments, and quality gates.
- Standardized GitHub repository policies, Packages/GHCR consumption, branch protection, and OIDC cloud access to improve developer self-service and release traceability.
- Applied Azure Policy, managed identities, and Key Vault controls; integrated IaC, secret, dependency, and container checks into shared platform workflows.
- Operated AKS with Helm and Argo CD, maintaining deployment health checks, workload identity, private service access, autoscaling, and recovery procedures.
- Implemented Azure Monitor, Log Analytics, and Application Insights visibility; led incident triage, blameless reviews, and runbook improvements with application teams.
- Supported Milvus and GPU-enabled services across Azure/AWS infrastructure; reviewed resource utilization, tagging, and capacity to improve AI workload readiness and cost visibility.
- Reviewed platform designs and PRs, mentored engineers, and partnered with infrastructure leaders on standards, roadmap priorities, and vendor/tool evaluations.
- Automated deployment concurrency and smoke-test checks in GitHub Actions, preventing overlapping environment updates and capturing verification evidence for release decisions.

Senior DevOps Engineer | GlobalLogic

03/2023 - 08/2023

Skills Used: Azure, AWS, GitHub Actions, Terraform, Linux, Docker, Kubernetes, Key Vault

- Partnered with application teams to troubleshoot Azure/AWS delivery and implement reusable GitHub Actions workflows for builds, tests, and release promotion.
- Maintained Linux/Windows GitHub runners and shared build tooling, diagnosing dependency, cache, credential, and execution-capacity failures.
- Standardized GitHub repositories, protected branches, environment approvals, and artifact retention to support consistent delivery standards.
- Standardized Docker images, Kubernetes deployment patterns, branch protections, and image-validation checks to make releases easier for developers to troubleshoot.
- Organized artifact feeds and repository consumption patterns and coached engineers on merge workflows, pipeline ownership, and environment promotion.
- Maintained Terraform configuration and Ansible automation for Azure environment setup, reviewing deployment plans and Linux configuration drift.
- Maintained Helm deployment defaults and environment values for shared Kubernetes services, validating application health and recovery during release promotion.
- Automated runner readiness and deployment diagnostics with Python and shell scripts, publishing troubleshooting utilities for application teams.

- Protected deployment inputs with Key Vault and least-privilege service connections; validated required checks and documented release handoffs.
- Validated reusable workflow changes in isolated test jobs, checking input contracts, artifact paths, and environment settings before adoption by application teams.

Senior DevOps Engineer II | Akamai Technologies

12/2021 - 03/2023

Skills Used: Azure, AWS, GitHub Actions, Terraform, AKS, Argo CD, Helm, Ansible, Azure Monitor

- Built GitHub Actions and Jenkins pipelines for Azure-hosted microservices, integrating Maven tests, ACR image publication, and Kubernetes deployment checks.
- Delivered Azure infrastructure with reusable Terraform modules and ARM templates; maintained supporting AWS environments and reviewed planned changes.
- Implemented Argo CD GitOps and Helm packaging for AKS, providing versioned environment configuration and validated rollback paths.
- Maintained Linux build runners and automated environment configuration with Ansible and scripts to keep build dependencies and execution environments consistent.
- Published versioned binaries and container images to shared repositories and integrated SonarQube feedback into engineering workflows.
- Improved service visibility with Azure Monitor, Log Analytics, and Application Insights; partnered with developers on incidents and recovery documentation.
- Reviewed infrastructure security, naming, and tagging with application owners, validating policy checks and platform dependencies before promotion.
- Diagnosed Kubernetes scheduling, image-pull, and service-connectivity failures, correlating workload events with cloud telemetry to restore reliable delivery.
- Developed Python and shell checks for infrastructure dependencies and release verification, improving consistent execution across Azure environments.
- Coordinated AKS node maintenance and application upgrades, verifying workload readiness and recovery steps with service owners before production changes.

Senior DevOps Engineer / Senior SRE | Turvo India Pvt Ltd

04/2020 - 12/2021

Skills Used: Azure, Terraform, AWS, CloudBees CI, Groovy, Python / FastAPI, JFrog, Kubernetes

- Administered CloudBees CI (Jenkins Enterprise), JFrog Artifactory, and Xray for SaaS product engineering, supporting reliable builds, secure artifact storage, and release execution.
- Developed Groovy Jenkins shared libraries for image versioning and artifact publishing, allowing developers to reuse tested pipeline steps across services.
- Developed Python FastAPI services integrating Jenkins, Jira, and JFrog to automate project onboarding and provide self-service access to delivery workflows.
- Partnered with microservice developers on build dependencies, unit and integration test stages, test-result publication, and repeatable promotion of release artifacts.
- Provisioned Azure application infrastructure with Terraform and Ansible, maintaining AWS integrations and environment-specific release configuration.
- Standardized Docker/Helm deployment patterns for AKS services and payment workloads, validating configuration, health checks, and production readiness.
- Built Python Prometheus exporters and highly available monitoring stacks with Ansible, Grafana, and Node Exporter to expose application and platform health.
- Worked with developers during production incidents, defect isolation, and sprint retrospectives; turned recurring support issues into platform fixes and reusable guidance.
- Maintained reusable deployment guidance and GitHub workflow conventions, coaching developers on release controls and shared platform capabilities.
- Managed artifact retention and dependency access for shared delivery services, troubleshooting repository failures and preserving approved build inputs for recovery.

Senior DevOps Engineer | HCL Technologies

02/2019 - 04/2020

Client: Mercedes-Benz Research & Development India

Skills Used: Azure, Terraform, AWS, Jenkins, Maven, Ansible, Kubernetes, Helm

- Partnered with developers on Azure platform and CI/CD improvements, translating service requirements into infrastructure and deployment standards.
- Built Jenkins and Maven delivery workflows for REST microservices across test, security-validation, UAT, and production environments.
- Packaged Kubernetes applications with Helm and managed namespaces, services, and configuration for repeatable deployments across shared clusters.
- Supported Azure infrastructure and AWS integrations, automating Linux configuration and troubleshooting networks, databases, and secrets access.
- Implemented ELK and Azure Monitor visibility; documented incident diagnostics and release procedures for application and platform teams.
- Versioned Azure deployment parameters and ARM/Ansible automation, reviewing infrastructure changes alongside application releases.
- Coordinated database and API deployment dependencies with developers, validating release order and recovery readiness before production handoff.
- Scripted Linux and application health validation with Python and Bash, capturing diagnostic output for operational handoffs.
- Reviewed release permissions and Key Vault integration with application teams, maintaining deployment validation and audit-ready change records.
- Validated certificate expiry and service connectivity during release readiness checks, coordinating configuration fixes with application and infrastructure owners.

DevOps Engineer | Mphasis Ltd

08/2016 - 12/2018

Client: HPE

Skills Used: Azure, Terraform, AWS, Ansible, Python, Linux, Nexus

- Built CI/CD workflows for API, database, and UI components with development teams, standardizing build dependencies and release promotion for shared application services.
- Provisioned Azure resources with Terraform and configured Linux environments with Ansible; maintained AWS infrastructure and deployment dependencies.
- Maintained build agents and Python and shell automation to keep software builds repeatable and simplify infrastructure administration.
- Defined Git branching and protected-branch checks, versioned artifacts, and environment parameters for repeatable application promotion.
- Validated environment readiness and application dependencies before deployments, checking cloud access, network connectivity, and required configuration.
- Packaged containerized services with Helm and versioned environment values, validating deployment health and recovery before release.
- Investigated build and deployment failures through agent logs, Linux diagnostics, and configuration comparisons, documenting corrective actions with developers.
- Validated cloud deployment permissions and protected credentials, documenting access and configuration prerequisites for application teams.
- Documented onboarding, platform configuration, and support procedures, helping developers adopt repeatable environment and release practices.
- Captured deployment manifests and configuration baselines for environment handoffs, helping support teams trace runtime failures to source or release changes.

EDUCATION

B.Tech (2009-2013) in Information Technology

Prakasam Engineering College, Jawaharlal Nehru Technological University, Kakinada
