rajendranelakurthi.github.io

Databricks Platform Engineer with 10+ years of cloud infrastructure, DevOps, and platform automation experience.

Specializes in **AWS Databricks workspace provisioning, Terraform, IAM, Unity Catalog, and compute governance.** Automates metastores, storage access, cluster policies, SQL warehouses, jobs, notebooks, and pipeline configuration with controlled infrastructure delivery. Supports serverless compute, Snowflake platform provisioning, and selected Azure Databricks environments, partnering with data teams on secure access, reliability, and cost management.

CERTIFICATIONS

GitLab Certified Associate

Microsoft Certified: Azure Fundamentals

Microsoft Certified: Azure DevOps Engineer Expert

AWS Certified Solutions Architect - Associate

MuleSoft Certified Developer - Level 1

DATABRICKS PLATFORM & INFRASTRUCTURE HIGHLIGHTS

- AWS Workspace Automation** Provisioned Databricks environments with reusable Terraform, integrating AWS networking, storage, IAM, and controlled workspace configuration.
- Governed Platform Access** Standardized Unity Catalog, metastore assignments, storage access, and compute policies to support consistent enterprise platform controls.
- Operational Readiness** Automated jobs, notebook and pipeline configuration, SQL warehouses, and Snowflake resources with release checks and support documentation.

CORE TECHNOLOGIES

COMPUTE & WORKSPACE MANAGEMENT

Cluster policies, runtime controls, autoscaling, auto-termination, SQL warehouses, serverless compute, jobs, notebooks, pipeline configuration, permissions

AWS DATABRICKS INFRASTRUCTURE

Account/workspace provisioning, Terraform AWS and Databricks providers, VPC, subnets, security groups, S3, cross-account IAM, PrivateLink, KMS

UNITY CATALOG & ACCESS

Regional metastores, workspace assignments, catalogs, schemas, storage credentials, external locations, grants, groups, service principals, least privilege; DBFS legacy storage/mounts, Unity Catalog volumes, workspace files

SNOWFLAKE PLATFORM AUTOMATION

Terraform Snowflake provider, databases, schemas, virtual warehouses, roles, grants, storage integrations, S3 external stages, resource monitors

AZURE DATABRICKS & OPERATIONS

Azure managed workspaces, VNet integration, ADLS Gen2, managed identities, Key Vault; CloudWatch, audit logs, access troubleshooting, cost controls, runbooks

TERRAFORM & PLATFORM DELIVERY

Reusable modules, remote state, environment isolation, plan/apply approvals, drift checks, GitHub Actions, Jenkins, GitLab CI, Python, Bash, Databricks CLI/APIs

PROFESSIONAL EXPERIENCE

Lead DevOps Engineer | AT&T Services Inc.

08/2023 - Present

Skills Used: AWS, Databricks, Terraform, Unity Catalog, IAM, S3, Snowflake, Azure Databricks

- Automated AWS Databricks workspace provisioning with Terraform, separating account-level infrastructure from workspace configuration across isolated environments.
- Enabled serverless compute for supported notebooks, jobs, and pipelines; configured access and usage controls separately from classic cluster policies.
- Automated jobs, notebook deployment, task dependencies, schedules, retries, and pipeline configuration through Terraform and Databricks APIs.
- Provisioned regional Unity Catalog metastores and workspace assignments, organizing catalogs, schemas, and grants for controlled data-platform access.
- Supported Azure Databricks managed workspaces, ADLS Gen2 access through managed identities, and Key Vault integration for selected environments.
- Provisioned Databricks SQL warehouses with sizing, scaling, auto-stop, and permission settings; supported serverless SQL for eligible workloads.
- Managed storage credentials and external locations backed by S3 and IAM trust policies, troubleshooting permissions and service-principal access.
- Authored cluster policies controlling approved runtimes, instance families, autoscaling limits, tags, and auto-termination for classic compute.
- Provisioned Snowflake warehouses, databases, schemas, roles, grants, and S3 storage integrations with Terraform, including cost and access controls.
- Integrated Terraform plan/apply approvals, state isolation, configuration checks, monitoring, and runbooks into platform delivery and incident response.
- Supported legacy DBFS storage and mount dependencies, planning migration of files and init scripts to Unity Catalog volumes or workspace files with access validation.
- Configured VPCs, private subnets, security groups, S3 storage, and cross-account IAM roles; implemented PrivateLink connectivity for supported workspace access paths.

Senior DevOps Engineer | GlobalLogic

03/2023 - 08/2023

Skills Used: AWS, Databricks, Terraform, Unity Catalog, IAM, S3, Snowflake, Azure Databricks

- Supported Azure Databricks workspace configuration, ADLS access, and secret integration alongside AWS platform delivery.
- Provisioned and maintained AWS Databricks workspaces with Terraform modules and environment-specific configuration for development and release environments.

- Configured Unity Catalog metastore assignments, catalogs, schemas, and access grants to support consistent workspace governance.
- Configured AWS IAM roles, S3 access, VPC networking, and security-group rules required for Databricks workspace connectivity.
- Automated Snowflake warehouse, schema, role, and grant configuration with Terraform to keep platform settings version-controlled.
- Troubleshoot workspace provisioning, cluster startup, job configuration, and access failures; documented corrective actions and release checks.
- Standardized cluster policies for runtime versions, compute sizing, autoscaling, tags, and idle termination.
- Managed SQL warehouse configuration, user access, startup behavior, and cost settings for shared analytics environments.
- Configured Databricks jobs, notebook paths, task parameters, schedules, retries, and pipeline permissions for repeatable execution.
- Maintained storage credentials and external locations, validating IAM trust and S3 permissions with data-platform teams.
- Integrated workspace changes with GitLab CI, reviewed Terraform plans, and maintained separate variables and credentials across environments.
- Troubleshoot DBFS file paths and S3-backed mount access, validating IAM permissions and notebook/job storage dependencies.

Senior DevOps Engineer II | Akamai Technologies

12/2021 - 03/2023

Skills Used: AWS, Databricks, Terraform, Unity Catalog, IAM, S3, Snowflake, Azure Databricks

- Supported Azure Databricks managed workspace and storage configuration while delivering the majority of platform infrastructure on AWS.
- Delivered AWS Databricks workspace infrastructure through Terraform, standardizing networking, storage, IAM, and environment configuration.
- Supported Unity Catalog adoption and metastore-to-workspace assignments as governance capabilities became available during the engagement.
- Established cross-account IAM trust and S3 access policies, resolving network and permission issues affecting workspace provisioning.
- Provisioned Snowflake platform resources with Terraform, organizing warehouses, databases, schemas, and role-based grants.
- Built Jenkins and GitHub Actions workflows for infrastructure validation and deployment; maintained Python automation and platform runbooks.
- Configured Databricks SQL warehouses and access permissions, supporting startup, capacity, and connectivity troubleshooting.
- Configured catalog and schema permissions and external storage access, coordinating identity and ownership requirements with platform teams.
- Maintained cluster policies covering runtime selection, node sizing, autoscaling, tags, and auto-termination.
- Automated notebook deployment and job configuration, including schedules, task parameters, dependencies, and failure notifications.
- Managed pipeline environment settings, execution permissions, and storage dependencies to support controlled releases.
- Managed DBFS file operations and storage mounts for existing workloads, documenting access settings and resolving S3 permission failures.

Senior DevOps Engineer / Senior SRE | Turvo India Pvt Ltd

04/2020 - 12/2021

Skills Used: AWS, Azure, CloudBees CI, Groovy, Python / FastAPI, JFrog, Terraform, Kubernetes

- Provisioned AWS-first application infrastructure with Terraform and Ansible, with Azure supporting delivery integrations.
- Authored Docker and Helm deployment patterns for Kubernetes services, including payment-platform workloads, to standardize configuration and application rollout.
- Maintained Git controls and deployment approvals for infrastructure changes, coordinating release readiness with application and platform owners.
- Developed Groovy Jenkins shared libraries for image versioning and artifact publishing, allowing developers to reuse tested pipeline steps across services.
- Built Python Prometheus exporters and highly available monitoring stacks with Ansible, Grafana, and Node Exporter to expose application and platform health.
- Worked with developers during production incidents, defect isolation, and sprint retrospectives; turned recurring support issues into platform fixes and reusable guidance.
- Administered CloudBees CI (Jenkins Enterprise), JFrog Artifactory, and Xray for SaaS product engineering, supporting reliable builds, secure artifact storage, and release execution.
- Developed Python FastAPI services integrating Jenkins, Jira, and JFrog to automate project onboarding and provide self-service access to delivery workflows.
- Partnered with microservice developers on build dependencies, unit and integration test stages, test-result publication, and repeatable promotion of release artifacts.

Senior DevOps Engineer | HCL Technologies

02/2019 - 04/2020

Client: Mercedes-Benz Research & Development India

Skills Used: AWS, Azure, Jenkins, Maven, Ansible, Kubernetes, Helm

- Supported AWS-first infrastructure and Azure integrations, automating Linux configuration and troubleshooting compute, databases, load balancing, and secrets access.
- Packaged Kubernetes applications with Helm and managed namespaces, services, and configuration for repeatable deployments across shared clusters.
- Maintained environment-specific infrastructure settings, secrets access, and deployment validation with application teams.
- Coordinated production release readiness, recovery steps, and post-deployment checks across development and operations.
- Implemented ELK operational visibility and documented environment and release procedures to help developers diagnose application and platform issues.
- Automated Linux server configuration with Ansible and scripts to keep environment dependencies consistent.
- Investigated infrastructure and application failures through logs and monitoring, documenting corrective actions and support procedures.
- Partnered with application developers and engineering stakeholders on CI/CD improvements for shared software services, translating roadmap priorities into delivery work.
- Built Jenkins and Maven delivery workflows for REST microservices across test, security-validation, UAT, and production environments.

DevOps Engineer | Mphasis Ltd

08/2016 - 12/2018

Client: HPE

Skills Used: AWS, Azure, Terraform, Ansible, Python, Linux, Nexus

- Provisioned AWS infrastructure through Terraform and automated Linux configuration and deployment with Ansible, supporting Azure environments.
- Maintained build agents and Python and shell automation to keep software builds repeatable and simplify infrastructure administration.
- Authored reusable Terraform modules and promoted reviewed infrastructure changes through CI/CD workflows.
- Managed Ansible playbooks for repeatable Linux configuration and application release preparation.
- Documented infrastructure dependencies, deployment procedures, and verification steps for operational handoffs.
- Defined Git branching practices, versioned artifacts, and environment-specific configuration so developers could promote consistent releases from development through production.
- Automated cloud administration and deployment checks with Python and shell scripts.
- Built CI/CD workflows for API, database, and UI components with development teams, standardizing build dependencies and release promotion for shared application services.
- Troubleshoot build-agent, dependency, and environment failures with development and support teams.

EDUCATION

B.Tech (2009-2013) in Information Technology

Prakasam Engineering College, Jawaharlal Nehru Technological University, Kakinada
