rajendranlakurthi.github.io

Senior DevOps Engineer with 10+ years of enterprise experience in cloud infrastructure, automation, CI/CD, and production operations. Builds and supports **AWS and production Kubernetes/EKS platforms** with Terraform, Helm, GitOps, and Python/Bash. Designs reusable **GitHub Actions workflows, AWS OIDC authentication, and Kubernetes-based self-hosted runners using ARC**. Drives cluster lifecycle management, autoscaling, container security, observability, and reliable releases while partnering with software engineering teams on troubleshooting and operational readiness.

CERTIFICATIONS

GitLab Certified Associate

Microsoft Certified: Azure Fundamentals

Microsoft Certified: Azure DevOps Engineer Expert

AWS Certified Solutions Architect - Associate

MuleSoft Certified Developer - Level 1

AWS, EKS & DELIVERY AUTOMATION HIGHLIGHTS

- Production EKS:** Cluster maintenance, workload scaling, networking, identity controls, and recovery procedures support reliable application delivery.
- Secure CI/CD:** Reusable workflows, short-lived AWS credentials, protected environments, and isolated runners standardize enterprise releases.
- Infrastructure Automation:** Terraform, GitOps, and Python/Bash tooling make provisioning and deployment repeatable and reviewable.

CORE TECHNOLOGIES

AWS INFRASTRUCTURE

EC2, VPC, IAM, S3, Route 53, RDS, EKS, ECR, ALB, CloudWatch, CloudTrail, Secrets Manager, multi-AZ architecture

GITHUB ACTIONS & CI/CD

YAML, reusable workflows, composite actions, matrix builds, caching, artifacts, Environments, Secrets, variables, deployment keys, Jenkins

GITOPS & CONTAINERS

ArgoCD, Helm charts, Docker multi-stage builds, ECR image promotion, Git-based reconciliation, rollout validation and rollback

NETWORKING & SECURITY

VPC CNI, AWS Load Balancer Controller, ALB ingress, NGINX, DNS, TLS, security groups, NetworkPolicy, image scanning, SonarQube

KUBERNETES & EKS OPERATIONS

Cluster upgrades, patching, node recycling, managed node groups, Karpenter, Cluster Autoscaler, HPA, VPA, PDBs, probes

IDENTITY & RUNNER PLATFORMS

AWS OIDC, IAM trust policies, IRSA, RBAC, self-hosted runners, Actions Runner Controller (ARC), ephemeral runner scale sets

IAC & AUTOMATION

Terraform modules, remote state, reviewed plans, AWS CDK familiarity, Python, Bash, Ansible, AWS CLI, REST APIs

OBSERVABILITY & RELIABILITY

CloudWatch, Prometheus, Grafana, Datadog, logs, alerts, capacity planning, incident response, root-cause analysis, runbooks

PROFESSIONAL EXPERIENCE

Lead DevOps Engineer | AT&T Services Inc.

08/2023 - Present

Skills Used: AWS, EKS, GitHub Actions, Terraform, Karpenter, ARC, ArgoCD, Python

- Led AWS infrastructure and production EKS operations, partnering with software engineering teams on scalable platform design, secure delivery, release readiness, and incident resolution.
- Administered EKS cluster upgrades, add-on compatibility checks, AMI patching, and managed node recycling using staged validation, cordon/drain procedures, and disruption budgets.
- Configured Karpenter NodePools and capacity limits; maintained Cluster Autoscaler for separate managed node groups and tuned HPA with VPA recommendations to balance capacity and workload demand.
- Developed Helm charts with environment values, probes, resource requests, affinity rules, and disruption budgets; validated manifests and application health before production promotion.
- Troubleshot VPC CNI IP allocation, CoreDNS, service routing, and ingress failures; configured ALB ingress through AWS Load Balancer Controller, including TLS and target health checks.
- Provisioned multi-AZ VPC, EC2, EKS, IAM, S3, Route 53, and RDS infrastructure using reusable Terraform modules, reviewed plans, remote state, and controlled environment promotion.
- Implemented IRSA with service-account-scoped trust policies and least-privilege permissions so Kubernetes workloads could access AWS services using temporary credentials.
- Designed GitHub Actions YAML pipelines for tests, security scans, Docker builds, ECR publication, and deployment verification; developed reusable workflows and custom composite actions.
- Configured GitHub-to-AWS OIDC federation with repository and environment restrictions; managed protected Environments, Secrets, variables, approvals, and scoped deployment keys.
- Operated ARC ephemeral runner scale sets on dedicated EKS build infrastructure, configuring runner groups, images, capacity limits, network access, and controller/runner log retention.
- Optimized workflow matrix jobs, dependency caching, concurrency controls, artifact retention, and job permissions; diagnosed runner registration, queueing, and build-environment failures.
- Implemented ArgoCD application delivery from reviewed Git changes, managing Helm values, sync health, drift detection, controlled promotion, and rollback through versioned configuration.
- Hardened multi-stage Docker images and ECR workflows with minimal runtime layers, non-root execution, vulnerability checks, immutable image references, and remediation gates.

- Automated EKS health checks and operational reporting with Python/Bash; correlated CloudWatch, Prometheus, and Grafana signals to resolve pod, node, network, and release incidents.

Senior DevOps Engineer | [GlobalLogic](#)

03/2023 - 08/2023

Skills Used: AWS, EKS, GitHub Actions, Terraform, Helm, Python, Bash

- Built reusable GitHub Actions workflows for application builds, automated tests, image publication, and controlled AWS environment deployments.
- Maintained hosted and self-hosted runners, resolving toolchain, dependency, cache, network, and permission issues that interrupted build and deployment jobs.
- Automated AWS provisioning through Terraform modules and reviewed plans, separating environment configuration and sensitive values from source code.
- Supported EKS workloads using Helm, health probes, resource limits, and rollout checks; investigated scheduling, image-pull, application startup, and service connectivity failures.
- Integrated code and container scans into CI/CD gates and worked with developers and QA on release validation, rollback procedures, and deployment documentation.

Senior DevOps Engineer II | [Akamai Technologies](#)

12/2021 - 03/2023

Skills Used: AWS, EKS, Terraform, GitHub Actions, ArgoCD, Helm, Prometheus

- Supported production AWS and EKS infrastructure, managing environment configuration, platform maintenance, operational readiness, and application delivery.
- Built Terraform definitions for VPC networking, IAM, compute, and Kubernetes dependencies with pull-request reviews and pipeline-based provisioning.
- Maintained GitHub Actions and Jenkins pipelines for Docker builds, test execution, ECR publishing, and Helm-based Kubernetes releases.
- Supported ArgoCD reconciliation and versioned deployment manifests, diagnosing drift, failed syncs, and rollout issues with application teams.
- Tuned pod resources and autoscaling, monitored node utilization, and investigated DNS, ingress, storage, and container failures through logs and metrics.
- Developed Prometheus/Grafana and CloudWatch dashboards and alerts; maintained incident runbooks and coordinated production changes with distributed engineering teams.

Senior DevOps Engineer / Senior SRE | [Turvo India Pvt Ltd](#)

04/2020 - 12/2021

Skills Used: AWS, Jenkins, GitHub Actions, Docker, Ansible, Python, Grafana

- Designed Jenkins and GitHub Actions delivery workflows that standardized application builds, automated checks, artifact promotion, and release validation.
- Developed Python REST integrations for Jenkins, Jira, and JFrog to automate onboarding, deployment reporting, and recurring operational tasks.
- Automated Linux and monitoring platform configuration using Ansible roles for Prometheus, Grafana, and Node Exporter with repeatable service checks.
- Supported Docker-based application delivery and AWS infrastructure operations, troubleshooting deployment failures, permissions, connectivity, and resource constraints.
- Built custom Python exporters, reviewed production alerts, and partnered with developers on capacity analysis, incident reviews, and recovery documentation.

Senior DevOps Engineer | [HCL Technologies](#)

02/2019 - 04/2020

Client: Mercedes-Benz Research & Development India

Skills Used: AWS, EC2, Jenkins, Ansible, Linux, Python, Bash

- Supported AWS EC2 and Linux application environments for Mercedes-Benz Research & Development India, coordinating infrastructure changes and production releases.
- Built Jenkins delivery jobs and Ansible playbooks for installation, configuration, application deployments, and environment validation.
- Developed Python and Bash automation for service checks, artifact verification, log collection, and recurring maintenance activities.
- Investigated application, network, permissions, and capacity issues; documented root causes and maintained release and rollback procedures.

DevOps Engineer | [Mphasis Ltd](#)

08/2016 - 12/2018

Client: HPE

Skills Used: AWS, Jenkins, Ansible, Linux, Shell, Healthcare Payer

- Supported Healthcare Payer application releases within Mphasis/HPE, coordinating deployment readiness and operational checks with development, QA, and infrastructure teams.
- Maintained Jenkins jobs and Ansible deployment tasks for Linux environments, versioned artifacts, configuration updates, and post-release validation.
- Used AWS CloudWatch and application logs to investigate host, connectivity, batch-processing, and deployment issues across supported environments.
- Created shell scripts and support runbooks for service validation, log collection, scheduled tasks, incident handovers, and recovery activities.

EDUCATION

B.Tech (2009-2013) in Information Technology

Prakasam Engineering College, Jawaharlal Nehru Technological University, Kakinada
