Senior Multi-Cloud Platform & Automation Engineer with 10 years of hands-on experience operating, maintaining, automating, and transitioning enterprise cloud environments across Google Cloud Platform (GCP), Microsoft Azure, and AWS. Strong track record supporting legacy cloud environments through structured **maintenance, operational troubleshooting, security hardening, and phased decommissioning processes** while consolidating and migrating components into target **AWS architectures**. Direct hands-on coding proficiency in **Go (Golang)** and **Python** for building cloud platform services and cloud automation tooling. Deep expertise in workflow orchestration using **Temporal** to automate complex, multi-step cloud provisioning, subscription lifecycle management, and decommissioning workflows. Expert in **Terraform** (Google, AzureRM, AWS providers) for repeatable infrastructure provisioning, automated state manipulation, and resource retirement. Proven ability to partner with Cloud Foundations teams, enforce least-privilege security controls, resolve high-priority infrastructure incidents, and author standard operational runbooks in remote, fast-paced enterprise environments (Dallas, TX / CST).

CERTIFICATIONS

AWS Certified Solutions Architect - Associate

Microsoft Certified: Azure DevOps Engineer Expert

Microsoft Certified: Azure Fundamentals

GitLab Certified Associate

MuleSoft Certified Developer - Level 1

MULTI-CLOUD PLATFORM & AUTOMATION HIGHLIGHTS

- **Multi-Cloud Operations & Decommissioning** Maintained, stabilized, and secured legacy GCP and Azure environments throughout complex decommissioning lifecycles, safely executing resource drain, dependency decoupling, and migration of critical workloads into AWS.
- **Workflow Orchestration with Temporal & Go** Engineered resilient, stateful workflow orchestration services in Go using Temporal—building durable sagas and task queues for automated cloud subscription provisioning, resource cleanup, and operational lifecycle automation.
- **Cloud Automation with Terraform & Python** Authored and maintained modular Terraform configurations and Python automation scripts for Azure and GCP subscription lifecycle management, policy enforcement, and infrastructure reconciliation.
- **Incident Triage & Production Support** Served as Tier 2/3 operational escalation lead, resolving critical cloud infrastructure incidents, network routing anomalies, and security vulnerabilities across legacy and target cloud estates.
- **Cloud Foundations & Governance Collaboration** Partnered with enterprise Cloud Foundations and security stakeholders to establish guardrails, least-privilege IAM controls, secrets rotation, and comprehensive troubleshooting runbooks.

CORE TECHNOLOGIES

CLOUD PLATFORMS & MIGRATION

Google Cloud Platform (GCP - Compute Engine, GKE, Cloud Run, Cloud Storage, VPC, Cloud IAM), Microsoft Azure (VMs, VNets, Azure AD/Entra ID, Subscriptions, Key Vault), Amazon Web Services (AWS - EC2, EKS, VPC, S3, IAM), Cloud Migration & Phased Decommissioning

LANGUAGES & CLOUD AUTOMATION

Go (Golang - concurrency, goroutines, Cloud SDKs, microservices), Python (Boto3, Azure SDK, Google Cloud Client Libraries, FastAPI), Bash, Shell scripting, REST APIs, JSON/YAML, CLI tooling

WORKFLOW ORCHESTRATION

Temporal (Workflows, Activities, Task Queues, Durable Execution, Saga Pattern, Worker Services), Apache Airflow, AWS Step Functions, Event-Driven Orchestration, Subscription Automation

INFRASTRUCTURE AS CODE (IAC)

Terraform (Modular design, Google Cloud Provider, AzureRM Provider, AWS Provider, State Migration & Tainting, Resource Decommissioning), Ansible, Packer, Policy-as-Code (Checkov, tfsec)

CLOUD OPERATIONS & INCIDENT TRIAGE

Incident Resolution & Triage, Root Cause Analysis (RCA), Cloud Monitoring, Cloud Logging, Azure Monitor, Log Analytics, AWS CloudWatch, Synthetic Probes, Operational Runbooks & Post-Mortems

SECURITY, COMPLIANCE & IAM

Cloud IAM Least Privilege, Azure RBAC, Service Principal Governance, Secret Manager, Azure Key Vault, AWS Secrets Manager & KMS, Security Incident Remediations, Audit Trail Logging

CI/CD & TOOLCHAINS

GitHub Actions, GitLab CI, Jenkins, Git, Docker, Kubernetes, Helm, Release Pipelines, Automated Rollback & Verification, Runner Maintenance

COLLABORATION & DELIVERY

Cloud Foundations Engagement, Cross-Functional Team Support, Technical Documentation, Architecture Runbooks, Agile/Scrum, Remote Collaboration (EST/CST Business Hours)

PROFESSIONAL EXPERIENCE

Senior Multi-Cloud Platform & Automation Engineer | AT&T Services Inc.

08/2023 - Present

Skills Used: GCP, Azure, AWS, Go (Golang), Temporal, Terraform, Python, Cloud IAM, Kubernetes, Cloud Monitoring, Cloud Migration

- Supported, maintained, and operated enterprise GCP and Azure environments through large-scale decommissioning initiatives, ensuring stability, security, and zero disruption to active business services prior to retirement.
- Built and enhanced cloud platform services in Go (Golang), integrating Temporal workflow orchestration to automate distributed subscription provisioning, product lifecycle workflows, and automated decommissioning pipelines.
- Partnered with the Cloud Foundations team to design and execute multi-cloud workload migration strategies, successfully transitioning and merging legacy GCP and Azure services into centralized AWS architectures.
- Developed automated provisioning tooling and Azure cloud automation using Terraform (AzureRM provider) and Python, standardizing resource tagging, subscription limits, and credential management.
- Diagnosed and resolved high-priority cloud infrastructure incidents, network routing anomalies, and security findings across legacy and target platforms, acting as the primary operational escalation point.
- Authored comprehensive operational documentation, troubleshooting runbooks, and decommissioning playbooks to support cross-functional engineering teams during transition phases.
- Enforced cloud security governance and IAM least-privilege policies across legacy environments, securing access tokens, rotating keys, and purging orphan subscriptions.

Cloud Platform & DevOps Engineer | GlobalLogic

03/2023 - 08/2023

Skills Used: Azure, GCP, Go, Terraform, Python, Docker, Kubernetes, GitLab CI, Cloud Security

- Developed cloud automation scripts and operational CLI utilities in Go and Python to automate environment configuration checks, resource discovery, and drift detection across Azure and GCP.
- Provisioned and updated multi-tenant infrastructure using Terraform, maintaining environment consistency across development, staging, and production estates.
- Supported development teams working in hybrid and legacy cloud environments, troubleshooting container networking, service principal authentication, and build pipeline failures.
- Implemented automated vulnerability scanning and secrets management controls, resolving high-risk security findings prior to planned infrastructure migrations.

Senior Cloud Infrastructure & Reliability Engineer II | Akamai Technologies

12/2021 - 03/2023

Skills Used: AWS, GCP, Terraform, Python, CloudWatch, Disaster Recovery, Runbooks, Linux

- Managed and maintained multi-region cloud infrastructure using Terraform, standardizing automated provisioning, state management, and configuration baselines.
- Supported ongoing platform consolidation by decommissioning redundant cloud infrastructure assets, cleaning up unattached storage volumes, and rerouting traffic to core AWS endpoints.
- Developed operational tooling in Python to monitor cloud resource quotas, track operational costs, and automate routine operational runbook tasks.
- Led high-severity incident triage, root cause analysis (RCA), and disaster recovery validation exercises to ensure platform availability across hybrid cloud deployments.

Cloud Operations & DevOps Engineer / SRE | Turvo India Pvt Ltd

04/2020 - 12/2021

Skills Used: AWS, Python, Go, Terraform, Kubernetes, Prometheus, Grafana, Incident Management

- Maintained high-availability production cloud environments, configuring monitoring, proactive alerting, and incident response runbooks using Prometheus and Grafana.
- Developed backend microservices and internal operational utilities in Go and Python to automate provisioning tasks and streamline cross-platform data flows.
- Executed infrastructure change requests and decommissioned deprecated microservices and test environments using Terraform, optimizing cloud spend and reducing attack surface.
- Partnered with development and security teams to resolve IAM access bottlenecks, enforce credential rotation, and maintain operational stability.

Cloud & Systems Engineer | HCL Technologies

02/2019 - 04/2020

Client: Mercedes-Benz Research & Development India
Skills Used: Cloud Infrastructure, Java, Python, Ansible, Jenkins, Cloud Monitoring, Cloud Security

- Supported enterprise connected-vehicle applications, managing infrastructure operations, incident troubleshooting, and environment configuration across multi-tier environments.
- Collaborated with infrastructure and architecture teams on workload migration initiatives, transitioning on-premises and legacy workloads into modern cloud platforms.
- Automated operational maintenance, patch deployments, and configuration drift remediation across Linux servers using Ansible and Python scripts.
- Documented system recovery procedures, operational runbooks, and cutover checklists to ensure seamless platform handovers.

Systems & Infrastructure Automation Engineer | Mphasis Ltd

08/2016 - 12/2018

Client: Hewlett Packard Enterprise (HPE)
Skills Used: Terraform, Ansible, Python, Shell, Jenkins, Splunk, Infrastructure Support

- Provisioned and maintained server and cloud infrastructure using Terraform and Ansible playbooks, ensuring configuration consistency across stages.
- Automated routine administrative operations, system health checks, and log archival workflows using Python and Shell scripting.
- Supported legacy application environments, diagnosing operational issues, analyzing log files in Splunk, and coordinating incident resolutions.
- Maintained accurate technical documentation of infrastructure topologies, deployment procedures, and troubleshooting guidelines.

EDUCATION

B.Tech (2009-2013) in Information Technology
Prakasam Engineering College, Jawaharlal Nehru Technological University, Kakinada
