rajendranelakurthi.github.io

Lead Azure DevOps Engineer with 10+ years of experience in build automation, release engineering, and production delivery. Specializes in **Azure Pipelines, Azure Repos, Azure Artifacts, and Bitrise for Android/iOS delivery**, spanning reusable YAML workflows, signing, packaging, and publishing to Google Play and the App Store. Builds repeatable embedded software release workflows and coordinates versioned artifacts, verification, and release readiness. Automates operations with Python and PowerShell, using AI-assisted scripting selectively with review and testing.

CERTIFICATIONS

Microsoft Certified: Azure DevOps Engineer Expert

Microsoft Certified: Azure Fundamentals

GitLab Certified Associate

MuleSoft Certified Developer - Level 1

AZURE & MOBILE DEVOPS DELIVERY HIGHLIGHTS

- Android/iOS Publishing** Automated mobile builds and release packaging with Bitrise, coordinating signing, provisioning, store submissions, and verification for Google Play and the App Store.
- Embedded Release Automation** Organized embedded software builds into traceable release packages with versioned binaries, configuration baselines, build logs, and verification evidence.
- Azure Pipeline Engineering** Standardized reusable YAML pipelines, source-control policies, artifact promotion, environment configuration, and approval gates for repeatable software delivery.

CORE TECHNOLOGIES

EMBEDDED BUILD & RELEASE

Automated compilation, build-toolchain configuration, versioned firmware artifacts, release manifests, checksums, build logs, integration verification, release baselines

AZURE DEVOPS ENGINEERING

Multi-stage YAML pipelines, reusable templates, Azure Repos, branch policies, pull requests, Azure Artifacts feeds, build agents, deployment environments, approvals

ANDROID & IOS DELIVERY

Bitrise workflows, Android Gradle builds, APK/AAB packaging, keystores, Xcode archives, iOS certificates, provisioning profiles, TestFlight, Google Play, App Store Connect

DELIVERY SECURITY & QUALITY

Azure Key Vault, service connections, workload identity federation, secret variables, secure files, SonarQube, security scanning, automated tests, release evidence

AUTOMATION & DIAGNOSTICS

Python, PowerShell, Bash, REST APIs, Azure Monitor, Log Analytics, Application Insights, root cause analysis; AI-assisted scripting and documentation with review and testing

AZURE INFRASTRUCTURE & DEPLOYMENT

Terraform, Bicep, ARM templates, Azure CLI, AKS, Azure Container Registry, Helm, Argo CD, environment parameters, deployment validation

PROFESSIONAL EXPERIENCE

Lead Azure DevOps Engineer | AT&T Services Inc.

08/2023 - Present

Skills Used: Azure DevOps, Azure Pipelines, Bitrise, Android/iOS, Azure Artifacts, Key Vault, Python, PowerShell

- Integrated automated tests, static analysis, security checks, and deployment evidence into release gates; coordinated readiness and issue resolution with development and QA.
- Automated Android builds with Bitrise and Gradle, managed signing inputs and APK/AAB packaging, and published approved releases to Google Play with release verification.
- Automated embedded software build and release workflows, capturing toolchain configuration, versioned binaries, checksums, and release manifests for reproducible delivery.
- Established Azure Repos branch policies and pull-request checks; published versioned packages and build artifacts for controlled promotion between environments.
- Diagnosed build, deployment, and application failures through Bitrise logs, Azure Monitor, and Log Analytics, coordinating fixes and post-release verification.
- Developed Python and PowerShell release utilities; used AI-assisted script drafting and documentation with code review and test validation.
- Engineered multi-stage Azure Pipelines with reusable YAML templates for build, test, package, and deployment stages, standardizing environment parameters and approval gates.
- Built iOS delivery workflows in Bitrise for Xcode archive/export, certificate and provisioning-profile handling, TestFlight distribution, and App Store submission and publishing coordination.
- Protected pipeline credentials with Azure Key Vault, secure files, and least-privilege service connections; troubleshoot signing, provisioning, and authentication failures.

Senior DevOps Engineer | GlobalLogic

03/2023 - 08/2023

Skills Used: Azure DevOps, Bitrise, Android/iOS, Git, PowerShell, Build Agents

- Built reusable Azure DevOps stages for compilation, automated tests, artifact publication, and release approvals across development, QA, and production.

- Maintained Bitrise Android and iOS build workflows, resolving dependency, signing, provisioning, and packaging failures before release handoff.
- Integrated embedded software build outputs into versioned release packages and preserved configuration, build logs, and test evidence for integration handoff.
- Strengthened release controls with Git branch protections, secure runner configuration, artifact validation, and documented troubleshooting procedures for engineering handoffs.
- Coordinated release dependencies and readiness checks with developers and QA, tracking blockers through corrective action and verified handoff.
- Managed environment variables and protected build inputs to keep mobile and Azure application configuration consistent across release stages.
- Coordinated Google Play and App Store release preparation with application teams, validating build versions, environment settings, and published release status.
- Preserved build identifiers, artifact versions, and test results for release reviews, enabling teams to trace delivered packages to source changes.
- Administered Linux and Windows build agents, standardized tool dependencies, and diagnosed pipeline and credential failures.

Senior DevOps Engineer II | Akamai Technologies

12/2021 - 03/2023

Skills Used: Azure, Bitrise, Android/iOS, Terraform, AKS, Python, Azure Monitor

- Correlated Azure Monitor, Log Analytics, and pipeline telemetry to isolate deployment failures and service-connectivity issues; coordinated corrective actions and verification with engineering teams.
- Investigated mobile workflow failures using build logs, dependency configuration, signing inputs, and artifact metadata; documented fixes for repeatable releases.
- Automated Azure application delivery with pipeline checks, versioned artifacts, environment-specific configuration, and post-deployment verification.
- Developed Python and PowerShell utilities for release checks and recurring operational tasks, publishing reusable automation for consistent execution across environments.
- Maintained environment-specific Terraform parameters and deployment configuration to keep Azure infrastructure changes repeatable across stages.
- Provisioned Azure infrastructure through Terraform and ARM templates and deployed services to AKS using Helm and Argo CD.
- Supported Bitrise Android and iOS build and release pipelines, preparing signed packages and coordinating Google Play and App Store publishing activities.
- Coordinated mobile package versions and Azure service compatibility checks before release, documenting deployment order and recovery steps.
- Published release runbooks and troubleshooting guidance for distributed teams, capturing verification results and operational handoff requirements.

Senior DevOps Engineer / Senior SRE | Turvo India Pvt Ltd

04/2020 - 12/2021

Skills Used: Azure, Jenkins, FastAPI, JFrog, Terraform, AKS, Prometheus

- Delivered CI/CD automation for SaaS and payment-platform workloads, aligning application releases, database dependencies, and Azure infrastructure changes.
- Built reusable Terraform modules for Azure networking and AKS, standardizing infrastructure configuration alongside application release workflows.
- Used Prometheus and Grafana telemetry with Ansible operational automation to investigate platform issues and support reliable application releases.
- Managed environment configuration and pipeline credentials for application delivery, separating release inputs across development and production stages.
- Coordinated application and database release dependencies with engineering teams, checking deployment readiness and recovery procedures.
- Developed Python FastAPI integrations for Jenkins, Jira, and JFrog to automate project onboarding and reduce manual release coordination.
- Standardized build, test, artifact publication, and promotion workflows with SonarQube and secure secrets handling.
- Administered CloudBees Jenkins, JFrog Artifactory, and Xray and maintained shared libraries for consistent artifact versioning.
- Documented artifact versions, promotion decisions, and operational handoffs to make release execution traceable and easier to support.

Senior DevOps Engineer | HCL Technologies

02/2019 - 04/2020

Client: Mercedes-Benz Research & Development India

Skills Used: Azure, Jenkins, ARM templates, Ansible, PowerShell, Helm

- Packaged Kubernetes services with Helm, maintaining deployment configuration for consistent releases across Azure-hosted environments.
- Built Jenkins and Maven delivery pipelines for REST microservices across test, security-validation, UAT, and production environments.
- Coordinated release configuration, application checks, and deployment verification with developers and QA before environment promotion.
- Maintained version-controlled environment parameters and deployment scripts to keep Azure application configuration consistent across release stages.
- Coordinated build artifacts and application dependencies for UAT and production handoffs, checking release versions before deployment.
- Documented deployment sequences, troubleshooting steps, and recovery procedures to support repeatable release execution and team knowledge transfer.
- Automated Azure virtual machines, virtual networks, and Linux configuration with ARM templates, Ansible, and PowerShell.
- Integrated Azure Key Vault with application delivery and managed secure database connectivity and environment credentials.
- Investigated deployment and application failures using ELK, Azure Monitor, and Log Analytics, coordinating fixes and validating restored service behavior.

DevOps Engineer | Mphasis Ltd

08/2016 - 12/2018

Client: HPE

Skills Used: Azure, Git, Terraform, ARM templates, Ansible, Python

- Created repeatable build and deployment pipelines for API, database, and UI components, promoting consistent artifacts across environments.
- Automated Azure infrastructure and application provisioning with Terraform, ARM templates, and Ansible to standardize environment setup.
- Managed environment-specific release parameters and deployment documentation, keeping configuration and operational handoffs consistent across stages.
- Troubleshot failed releases with development and operations teams, documented corrective actions, and verified deployment recovery.
- Maintained Git branching practices and build-agent configuration to support controlled code integration and repeatable builds.
- Validated release packages and artifact versions before environment promotion, checking required configuration and deployment inputs.
- Coordinated release scheduling and readiness with developers and QA, tracking build dependencies and resolving handoff blockers.
- Collected build logs and deployment verification results for release handovers, helping support teams trace failures to configuration or package changes.
- Developed Python and PowerShell scripts for recurring deployment and administration tasks, reducing manual release preparation.

EDUCATION

B.Tech (2009-2013) in Information Technology

Prakasam Engineering College, Jawaharlal Nehru Technological University, Kakinada
