

RAJENDRA PRASAD N

LEAD PLATFORM ENGINEER | CLOUD INFRASTRUCTURE

rajendran.scm@gmail.com

+1 (469) 926-4201

Dallas, TX

linkedin.com/in/rajendranlakurthi

rajendranlakurthi.github.io

Lead Platform Engineer with 10+ years of experience in DevOps, cloud engineering, and production reliability. Operates **Kubernetes** platforms, **Helm** deployments, **Docker** workloads, and **Terraform/Ansible** automation across **AWS** and **Azure**. Troubleshoots scheduling, container startup, storage, ingress, DNS, and application failures; builds reusable Jenkins and GitHub Actions pipelines with secure release controls. Combines Linux administration, Python/Bash automation, observability, incident response, and recovery planning to support scalable enterprise services. Based in Dallas, TX.

CERTIFICATIONS

GitLab Certified Associate

Microsoft Certified: Azure Fundamentals

Microsoft Certified: Azure DevOps Engineer Expert

AWS Certified Solutions Architect - Associate

KEY PLATFORM ACHIEVEMENTS

- Kubernetes Delivery** Standardized Helm and Kubernetes deployment patterns, release health checks, and environment configuration for production services.
- AWS & Azure Automation** Built reusable infrastructure and delivery tooling across cloud environments with Terraform, Ansible, Python, and shared CI/CD pipelines.
- Production Reliability** Correlated workload events, application logs, and cloud telemetry to isolate failures and improve operational runbooks.

CORE TECHNOLOGIES

KUBERNETES & CLUSTER OPERATIONS

Pods, Deployments, Services, ConfigMaps, Secrets, namespaces, RBAC, Helm; StatefulSets, DaemonSets, PV/PVC and StorageClass troubleshooting; node lifecycle, readiness probes, HPA; VPA concepts

AWS & AZURE INFRASTRUCTURE

EKS, EC2, VPC, IAM, ALB/NLB, Route 53, EBS/EFS, S3, CloudWatch; AKS, VNETs, NSGs, Azure Load Balancer, Azure DNS, ACR, Key Vault, Azure Monitor

CI/CD, IAC & GITOPS

Jenkins/CloudBees, Groovy shared libraries, GitHub Actions, GitLab pipeline patterns, Maven, Artifactory, Terraform, Ansible, Git, branch protections, Helm, Argo CD

LINUX, AUTOMATION & NETWORKING

Linux administration, Python, Bash, PowerShell; process, filesystem and network diagnostics; DNS, ingress, TLS, load balancing, private endpoints and firewall troubleshooting; RHEL/Ubuntu operational concepts

OBSERVABILITY & PRODUCTION RELIABILITY

Prometheus, Grafana, ELK/Elastic, Node Exporter, application logs, Kubernetes events, CloudWatch, Azure Monitor; capacity reviews, incident triage, root-cause analysis, recovery runbooks

SECURITY & RESILIENCE

RBAC, least privilege, network policies, Key Vault, IAM, secret handling, image scanning, vulnerability remediation, health checks, rollout/rollback, availability and recovery validation; OpenShift, Istio/Linkerd, Vault/Keycloak concepts

PROFESSIONAL EXPERIENCE

Lead Platform/DevOps Engineer | AT&T Services Inc.

08/2023 - Present

Skills Used: AWS, Azure, Kubernetes, Helm, Terraform, Ansible, Python, Linux, Jenkins, GitHub Actions

- Operated Kubernetes application platforms across AWS EKS and Azure AKS, coordinating workload deployment, production support, and environment readiness.
- Built reusable Terraform infrastructure for AWS VPC, IAM, and EKS dependencies and Azure networking, identity, and AKS services.
- Standardized Helm charts and environment values for microservices, reviewing Deployments, Services, ConfigMaps, and Secrets before release promotion.
- Troubleshoot pending pods, restart loops, failed image pulls, and probe failures using Kubernetes events, container logs, and node diagnostics.
- Investigated ingress, DNS, load-balancer, and service-connectivity failures across AWS and Azure, tracing traffic between application and infrastructure layers.
- Managed namespace access and RBAC, coordinating AWS IAM and Azure identity controls with least-privilege deployment permissions.
- Reviewed persistent-volume claims, storage provisioning, and mount failures for stateful services, aligning storage configuration with workload recovery requirements.
- Coordinated cluster and worker-node maintenance, validating version compatibility, drain readiness, and workload health during planned changes.
- Reviewed requests, limits, autoscaling, and scheduling constraints with service owners to address capacity bottlenecks and unstable workload behavior.
- Built reusable Jenkins and GitHub Actions workflows for container builds, automated tests, artifact publication, Helm releases, and deployment verification.
- Integrated image and dependency checks, protected deployment credentials, and infrastructure validation into shared CI/CD workflows.
- Correlated Prometheus/Grafana metrics, application logs, CloudWatch, and Azure telemetry during production incidents and root-cause investigations.
- Automated Linux, cluster-readiness, and release diagnostics with Python and Bash, reducing repeated manual investigation and support effort.
- Supported Milvus and GPU-enabled workloads on AWS/Azure infrastructure, reviewing service dependencies, resource utilization, and deployment readiness.
- Mentored engineers and maintained production-readiness and recovery runbooks, coordinating rollback checks and cross-team incident follow-up.

Senior DevOps Engineer | GlobalLogic

03/2023 - 08/2023

Skills Used: AWS, Azure, Kubernetes, Helm, Terraform, Ansible, Python, Linux, Jenkins, GitHub Actions

- Partnered with application teams on Kubernetes delivery across AWS and Azure, reviewing deployment prerequisites and release verification.
- Maintained Docker build tooling and Linux/Windows runners, diagnosing cache, credential, dependency, and execution-capacity failures.
- Built reusable GitHub Actions workflows for container builds, test stages, artifact publication, and controlled environment promotion.
- Maintained Terraform and Ansible automation for AWS/Azure environment configuration, reviewing infrastructure changes and Linux drift.
- Validated Helm values, ConfigMaps, and Secrets for shared Kubernetes services, resolving environment differences before deployment.
- Investigated pod startup and service-connectivity failures using workload events, logs, DNS checks, and application health endpoints.
- Standardized protected branches, release approvals, and artifact retention, preserving source-to-release traceability.
- Automated runner-readiness and Kubernetes release diagnostics with Python and shell scripts for developer self-service.
- Protected cloud deployment access with scoped AWS/Azure credentials and documented required permissions and secrets prerequisites.
- Coached developers on deployment health, rollback inputs, and shared pipeline ownership, documenting operational handoffs.

Senior DevOps Engineer II | Akamai Technologies

12/2021 - 03/2023

Skills Used: AWS, Azure, Kubernetes, Helm, Terraform, Ansible, Python, Linux, Jenkins, GitHub Actions

- Built Jenkins and GitHub Actions pipelines for Kubernetes microservices, integrating Maven tests, image publication, and deployment checks.
- Provisioned Azure platform services and supporting AWS infrastructure with reusable Terraform modules and reviewed change plans.
- Implemented Helm packaging and Argo CD GitOps for AKS workloads, versioning environment configuration and rollback inputs.
- Maintained Linux runners and Ansible configuration, troubleshooting build dependencies, filesystem issues, and execution failures.
- Investigated pod scheduling, image-pull, and service-connectivity failures, correlating Kubernetes events with application and cloud telemetry.
- Published versioned binaries and Docker images to shared repositories and incorporated SonarQube feedback into delivery workflows.
- Used Azure Monitor, Application Insights, and AWS operational telemetry to support production troubleshooting and recovery documentation.
- Reviewed namespace configuration, infrastructure access, tagging, and network dependencies with application owners before releases.
- Built Python/Bash checks for AWS/Azure endpoints and release prerequisites, producing consistent diagnostics across environments.
- Coordinated AKS node maintenance and application upgrades, verifying workload readiness and recovery steps with service owners.

Senior DevOps Engineer / Senior SRE | Turvo India Pvt Ltd

04/2020 - 12/2021

Skills Used: AWS, Azure, Kubernetes, Helm, Terraform, Ansible, Python, Linux, Jenkins, GitHub Actions

- Administered CloudBees CI, JFrog Artifactory, and Xray for SaaS engineering, supporting reliable builds and secure container artifacts.
- Developed Groovy Jenkins libraries for Docker image versioning and artifact publication, standardizing reusable release steps.
- Built Python/FastAPI services integrating Jenkins, Jira, and JFrog to automate onboarding and developer delivery workflows.
- Provisioned application infrastructure on Azure and maintained AWS integrations with Terraform/Ansible and environment-specific configuration.
- Standardized Docker and Helm deployments for Kubernetes services and payment workloads, validating health checks and production readiness.
- Partnered with microservice developers on test stages, dependency resolution, and repeatable promotion of release artifacts.
- Built Python Prometheus exporters and Grafana/Node Exporter monitoring stacks to expose Linux and application health.
- Investigated production incidents across application, Kubernetes, and AWS/Azure dependencies, converting repeat issues into platform fixes.
- Reviewed deployment credentials and artifact vulnerability findings, coordinating remediation with application teams before release.
- Maintained Kubernetes troubleshooting and recovery guidance, coaching developers on shared release controls and operational ownership.

Senior DevOps Engineer | HCL Technologies

02/2019 - 04/2020

Client: Mercedes-Benz Research & Development India

Skills Used: AWS, Azure, Kubernetes, Helm, Terraform, Ansible, Python, Linux, Jenkins, GitHub Actions

- Built Jenkins/Maven workflows for REST microservices across test, UAT, and production, coordinating release prerequisites with developers.
- Supported Azure application infrastructure and AWS integrations, troubleshooting networking, database connections, and secrets access.
- Packaged Kubernetes applications with Helm, maintaining namespaces, Services, and configuration for repeatable cluster deployments.
- Investigated container startup, service discovery, and deployment failures using application logs, Kubernetes events, and Linux diagnostics.
- Automated cloud configuration with Terraform, ARM templates, and Ansible, reviewing infrastructure changes alongside application releases.
- Implemented ELK and Azure Monitor visibility and reviewed AWS environment diagnostics during application incidents.
- Coordinated database and API release dependencies, verifying execution order and recovery readiness before production handoff.
- Scripted Linux and application health checks with Python/Bash, capturing diagnostic evidence for support teams.
- Reviewed AWS/Azure deployment permissions and protected secret inputs, maintaining validated release procedures and change records.
- Checked certificate expiry, DNS, and service connectivity during release readiness reviews and coordinated fixes with infrastructure owners.

DevOps Engineer | Mphasis Ltd

08/2016 - 12/2018

Client: HPE

Skills Used: AWS, Azure, Kubernetes, Helm, Terraform, Ansible, Python, Linux, Git, Bash

- Built CI/CD workflows for API, database, and web components, standardizing build dependencies and release promotion.
- Provisioned Azure resources and maintained AWS infrastructure dependencies with Terraform and reviewed environment parameters.
- Configured Linux environments with Ansible and automated build-agent maintenance with Python and shell scripts.
- Packaged containerized services with Helm and Kubernetes manifests, checking deployment health before release.
- Investigated build and deployment failures through agent logs, Linux diagnostics, and configuration comparisons with developers.
- Validated AWS/Azure access, DNS, network connectivity, and application dependencies before deployments.
- Defined Git branching and protected-branch checks, versioning artifacts and environment configuration for repeatable promotion.
- Protected deployment credentials and reviewed cloud permissions, documenting access prerequisites for application teams.
- Maintained deployment manifests and configuration baselines, helping support teams trace failures to source and release changes.
- Documented Linux, cloud, and application recovery procedures, supporting repeatable operational handoffs and environment onboarding.

EDUCATION

B.Tech (2009-2013) in Information Technology

Prakasam Engineering College, Jawaharlal Nehru Technological University, Kakinada
