rajendranelakurthi.github.io

Transformation-oriented DevOps and Platform Engineering Leader with 12+ years of technology delivery, engineering leadership, and large-scale cloud transformation experience. Proven track record operating at both strategic roadmap and hands-on execution levels to establish governance, drive Agile/SAFe adoption, and accelerate DevOps maturity across complex enterprise environments. Expert in architecting modern CI/CD ecosystems across **GitHub Actions, GitLab CI, Jenkins, and Azure DevOps**, cloud platforms (AWS, Azure, GCP), Infrastructure as Code (**Terraform, Ansible**), and container orchestration (**Kubernetes, EKS, AKS, Docker**). Champion of **DORA engineering metrics** (Deployment Frequency, Lead Time, CFR, MTTR), Site Reliability Engineering (SRE), shift-left testing, and developer experience (DevEx) optimization. Exceptional stakeholder manager, facilitator, and executive communicator who bridges deep technical engineering with quantifiable business outcomes, vendor governance, and cross-functional team enablement.

CERTIFICATIONS

AWS Certified Solutions Architect - Associate

Microsoft Certified: Azure DevOps Engineer Expert

Microsoft Certified: Azure Fundamentals

GitLab Certified Associate

MuleSoft Certified Developer - Level 1

ENTERPRISE TRANSFORMATION & DEVOPS LEADERSHIP HIGHLIGHTS

- **DevOps Transformation Roadmap** Defined and executed multi-year enterprise DevOps transformation roadmaps, aligning engineering capabilities with executive business priorities to modernize delivery architectures across distributed organizations.
- **DORA Metrics & Engineering Excellence** Established automated DORA metrics tracking—elevating deployment frequency from bi-weekly to on-demand, cutting lead time for changes by 65%, and reducing change failure rate to under 2%.
- **Toolchain Optimization & DevEx** Consolidated fragmented toolchains across GitHub, GitLab, Jenkins, and Azure DevOps into standardized, self-service CI/CD pipelines with shift-left testing and security governance.
- **Agile & SAFe Governance** Governed delivery priorities and technical roadmaps within SAFe enterprise frameworks, coordinating cross-team dependencies, mitigating delivery risks, and resolving architectural impediments.
- **Culture & Communities of Practice** Spearheaded organizational change management and established an enterprise DevOps Community of Practice (CoP), facilitating executive reviews, architecture workshops, and continuous learning.

CORE TECHNOLOGIES

TRANSFORMATION & LEADERSHIP

Enterprise DevOps Transformation, Strategic Roadmapping, DORA Metrics Framework, Change Management, Developer Experience (DevEx), Value Stream Management, Engineering Culture & Communities of Practice (CoP), Technical Workshops & Executive Facilitation

CI/CD & TOOLCHAIN OPTIMIZATION

GitHub Actions, GitLab CI, Jenkins, Azure DevOps, AWS CodePipeline, ArgoCD, Helm, Artifact Versioning (JFrog Artifactory, Nexus), Self-Hosted Runner Fleets, Automated Canary Deployments, Toolchain Consolidation

DELIVERY MODELS & GOVERNANCE

Scaled Agile Framework (SAFe), Agile/Scrum, Program Increment (PI) Planning, Cross-Team Dependency Management, Delivery Risk Governance, Vendor & SLA Management, Engineering KPIs, Resource Allocation

INFRASTRUCTURE AS CODE & CLOUD

Terraform (Modular Architecture, State Governance, Terragrunt), Ansible, CloudFormation, Bicep, AWS (EKS, VPC, IAM, S3, RDS), Microsoft Azure, Google Cloud Platform (GCP), Policy-as-Code (Checkov, tfsec, OPA)

CONTAINERS & CLOUD-NATIVE

Docker, Kubernetes, Amazon EKS, Azure AKS, Rancher, OpenShift, Service Mesh, Ingress Controllers, Cluster Autoscaling, GitOps Workflows, Microservices Architecture, Container Hardening

SITE RELIABILITY ENGINEERING (SRE)

SRE Principles, SLOs / SLIs / SLAs, Error Budgets, Incident Management & Root Cause Analysis (RCA), Chaos Engineering, MTTR Reduction, Automated Runbooks, Synthetic Monitoring

OBSERVABILITY & TELEMETRY

Amazon CloudWatch, Prometheus, Grafana, Datadog, Splunk, ELK Stack, OpenTelemetry, DORA Performance Dashboards, Distributed Tracing, Alert Optimization

SHIFT-LEFT & PLATFORM ENGINEERING

Shift-Left Automated Testing, SAST/DAST Integration (SonarQube, Trivy, Fortify), Secrets Management (Vault, AWS Secrets Manager), Internal Developer Platforms (IDP), Python, Bash, Java

PROFESSIONAL EXPERIENCE

Lead DevOps Transformation & Platform Engineering Leader | AT&T Services Inc.

08/2023 - Present

Skills Used: DevOps Transformation, DORA Metrics, SAFe / Agile, GitHub Actions, AWS CodePipeline, Terraform, Kubernetes (EKS), DevEx, SRE, Python

- Defined and executed the enterprise DevOps transformation roadmap across distributed engineering streams, establishing unified CI/CD, Infrastructure as Code, and platform self-service standards.
- Implemented automated DORA metrics instrumentation across delivery pipelines, tracking deployment frequency, lead time, change failure rate, and MTTR to drive data-driven continuous engineering improvement.
- Championed developer experience (DevEx) initiatives and toolchain optimization, standardizing reusable GitHub Actions and CodePipeline workflows that reduced pipeline onboarding time by 50%.
- Scaled enterprise Kubernetes (EKS) and modular Terraform infrastructure automation, enforcing policy-as-code, automated drift detection, and secure multi-account environment baselines.
- Governed cross-team delivery dependencies and technical risks within SAFe/Agile release trains, facilitating alignment between engineering squads, architects, and business stakeholders.
- Spearheaded shift-left testing and security integration, embedding automated static code analysis, container vulnerability scanning, and secrets management directly into PR validation.
- Founded and led the enterprise DevOps Community of Practice (CoP), conducting technical workshops, architectural retrospectives, and quarterly executive transformation updates.
- Coordinated multi-vendor technical engagements and led Tier 2/3 operational escalation governance, driving blameless post-mortems and proactive reliability enhancements.

Senior DevOps & Platform Engineering Lead | GlobalLogic

03/2023 - 08/2023

Skills Used: GitLab CI, Jenkins Modernization, Kubernetes (EKS/AKS), Terraform, SAFe, DevSecOps, Trivy, Docker

- Led CI/CD modernization and toolchain optimization initiatives, migrating legacy Jenkins pipelines to GitLab CI and engineering self-hosted, auto-scaling runner fleets to boost build concurrency.
- Partnered with product and engineering leaders in a SAFe delivery model to establish automated release gates, container image validation (Trivy), and shift-left DevSecOps controls.
- Standardized Kubernetes (EKS/AKS) deployment templates and Helm packaging across multi-tenant clusters, accelerating developer onboarding and release predictability.
- Mentored cross-functional engineering squads on automated testing, continuous delivery standards, and GitOps workflows, elevating team DevOps maturity.
- Formulated deployment KPIs and led retrospective reviews to eliminate delivery bottlenecks across distributed engineering teams.

Senior DevOps Transformation Engineer II | Akamai Technologies

12/2021 - 03/2023

Skills Used: Terraform, CloudFormation, GitHub Actions, EKS, CloudWatch, Disaster Recovery, SRE, Python

- Spearheaded infrastructure automation and disaster recovery transformation across multi-region cloud environments using Terraform, CloudFormation, and GitHub Actions.
- Architected automated deployment workflows and telemetry dashboards in CloudWatch, tracking deployment health, pipeline latency, and service reliability metrics.
- Facilitated cross-team architectural alignment sessions to decompose monolithic deployment patterns into containerized microservices running on Amazon EKS.
- Coordinated vendor technical engagements and internal engineering dependencies, ensuring high-availability operations and adherence to enterprise SLA/SLO commitments.
- Authored reusable automation runbooks and operational scripts in Python, eliminating manual intervention across release promotion and environment maintenance.

Senior DevOps & SRE Lead | Turvo India Pvt Ltd

04/2020 - 12/2021

Skills Used: SRE, Terraform, Kubernetes, Prometheus, Grafana, FastAPI, Jenkins, MTTR Reduction

- Drove SRE and reliability transformation for high-volume logistics and payment platforms, defining SLOs/SLIs, automated incident response, and custom Prometheus observability exporters.
- Designed reusable Terraform IaC modules and Kubernetes deployment blueprints, establishing automated, repeatable environment provisioning across dev, staging, and production.
- Enforced shift-left security governance, integrating automated secrets management (AWS Secrets Manager/KMS), IAM least privilege, and compliance controls into CI/CD pipelines.
- Led agile sprint planning, technical retrospectives, and Tier 2/3 escalation resolution, reducing MTTR by 45% through automated telemetry, proactive alerting, and standardized runbooks.
- Developed internal platform automation APIs in Python (FastAPI) to integrate Jenkins, Jira, and monitoring tooling, streamlining release governance.

Senior DevOps & Release Transformation Engineer | HCL Technologies

02/2019 - 04/2020

Client: Mercedes-Benz Research & Development India
Skills Used: Agile / Scrum, CI/CD Pipelines, Jenkins, Maven, CloudFormation, Stakeholder Facilitation, Ansible

- Served as acting Scrum Master and DevOps transformation lead, presenting CI/CD and cloud migration roadmaps for enterprise connected-vehicle programs.
- Partnered with international leadership and stakeholders in Germany to present engineering roadmaps, align quarterly PI planning objectives, and drive Agile adoption.
- Built automated Maven and Jenkins continuous delivery pipelines, transitioning legacy release processes to auditable, automated cloud deployments.
- Organized technical workshops and release readiness reviews, coordinating dependencies across multiple enterprise application streams.
- Automated fleet configuration and patch management across Linux and Windows instances using Ansible playbooks and PowerShell scripting.

DevOps & Release Engineer | Mphasis Ltd

08/2016 - 12/2018

Client: Hewlett Packard Enterprise (HPE)
Skills Used: Terraform, Ansible, Jenkins, Git, Maven, Splunk, Release Governance

- Authored and maintained modular Terraform and Ansible automation to establish repeatable environment provisioning across development, QA, and production.
- Built centralized CI/CD pipelines in Jenkins and Git, integrating automated unit testing, artifact repositories (Nexus), and deployment verification.
- Established Git branching strategies, release governance checklists, and centralized Splunk logging to improve team collaboration and delivery visibility.
- Developed Python and Shell operational scripts to automate administrative tasks, cloud configuration updates, and log rotation.

EDUCATION

B.Tech (2009-2013) in Information Technology
Prakasam Engineering College, Jawaharlal Nehru Technological University, Kakinada
