Senior Application and Production Support Engineer with more than a decade of experience maintaining enterprise applications and operational environments. Strong background supporting **Development, UAT, and Production**; monitoring application health; troubleshooting .NET services, APIs, scheduled jobs, data-processing failures, SQL issues, deployment defects, and environment configuration; and driving root-cause analysis and corrective action. Experienced with SQL queries, stored procedures, data analysis, CloudWatch, Splunk, ELK, Grafana, AppDynamics, PowerShell, Python, Bash, Jenkins, Git, and operational automation. Provides supporting DevOps and AWS expertise for deployments, releases, cloud resources, monitoring, scalability, and reliability while serving as the bridge between development, operations, infrastructure, QA, project, and client-facing teams.

CERTIFICATIONS

GitLab Certified Associate

Microsoft Certified: Azure Fundamentals

Microsoft Certified: Azure DevOps Engineer Expert

AWS Certified Solutions Architect - Associate

MuleSoft Certified Developer - Level 1

APPLICATION & PRODUCTION SUPPORT HIGHLIGHTS

- Production Support** Supported business-critical enterprise applications across Development, UAT, and Production through monitoring, incident triage, restoration, escalation, and follow-through.
- Application Troubleshooting** Diagnosed .NET services, APIs, scheduled jobs, data-processing workflows, configuration defects, deployment failures, and infrastructure dependencies.
- SQL & Data Support** Used SQL queries, stored procedures, data analysis, and database troubleshooting to investigate processing failures and resolve data-quality issues.
- Operational Reliability** Improved dashboards, alerts, runbooks, health checks, environment controls, root-cause analysis, corrective actions, and production readiness.
- Deployment Support** Coordinated release readiness, deployment execution, validation, rollback planning, and post-release support with development, operations, infrastructure, QA, and project teams.

CORE TECHNOLOGIES

APPLICATION & PRODUCTION SUPPORT

Incident triage, service restoration, defect investigation, escalation, RCA, corrective actions, client-reported issues, problem management

ENVIRONMENT MANAGEMENT

Development, Test, UAT, Production, configuration management, application settings, secrets, environment validation, operational readiness

.NET APPLICATION SUPPORT

.NET, C#, APIs, Windows services, IIS, application logs, configuration, dependency analysis, code review, defect support

SQL & DATA SUPPORT

SQL, stored procedures, complex queries, joins, data analysis, data correction, MySQL, PostgreSQL, SQL Server, RDS, Aurora

MONITORING & DIAGNOSTICS

CloudWatch, Splunk, ELK, Grafana, Prometheus, AppDynamics, dashboards, logs, metrics, alerts, health checks

BATCH & OPERATIONAL WORKFLOWS

Scheduled jobs, batch processing, data-processing failures, job dependencies, file processing, retries, reconciliation, operational controls

RELEASE & DEPLOYMENT SUPPORT

Deployment scripts, release procedures, readiness reviews, change coordination, smoke tests, validation, rollback, post-release monitoring

AUTOMATION & UTILITIES

PowerShell, Python, Bash, Shell, Batch, YAML, JSON, APIs, utility programs, operational tooling

AWS SUPPORT

EC2, ECS, EKS, S3, RDS, Aurora, Lambda, CloudWatch, IAM, VPC, load balancers, backup and recovery

DEVOPS TOOLING

Jenkins, Git, GitLab, Terraform, CloudFormation, Ansible, Docker, Kubernetes, Maven, JFrog, Nexus

PROFESSIONAL EXPERIENCE

Lead Application & Production Support Engineer | AT&T Services Inc.

08/2023 - Present

Skills Used: Production Support, .NET, SQL, AWS, CloudWatch, Splunk, Python, PowerShell, Jenkins, Git

- Led application and production support for enterprise services across Development, UAT, and Production environments, owning operational health, incident triage, restoration, escalation, and stakeholder communication.
- Monitored application availability, performance, scheduled processing, infrastructure signals, logs, dashboards, and alerts using CloudWatch, Splunk, ELK, Grafana, Prometheus, and application-specific telemetry.
- Troubleshoot .NET applications, services, APIs, IIS configurations, runtime dependencies, application settings, authentication failures, and integration issues in partnership with development teams.
- Investigated SQL and data-processing issues using complex queries, joins, stored procedures, execution analysis, reconciliation checks, and targeted data validation to identify root causes.
- Supported batch jobs and operational workflows by diagnosing failed schedules, upstream and downstream dependencies, file-processing errors, retries, partial completion, and data-quality exceptions.
- Performed root-cause analysis for recurring production incidents and drove corrective actions through monitoring improvements, automation, configuration fixes, code changes, runbooks, and preventive controls.
- Managed environment configurations, application settings, secrets, connection details, deployment parameters, and version alignment across Development, UAT, and Production.
- Coordinated release readiness, change approvals, deployment execution, smoke testing, business validation, rollback planning, and post-release monitoring with engineering, QA, infrastructure, and project teams.
- Developed Python, PowerShell, Bash, and SQL utilities for health checks, log analysis, data validation, operational reporting, deployment support, and repeatable recovery procedures.
- Supported AWS-hosted applications and services, resolving compute, storage, database, IAM, networking, load-balancing, scaling, monitoring, backup, and connectivity issues while maintaining operational readiness.

Senior Application Support Engineer | GlobalLogic

03/2023 - 08/2023

Skills Used: Application Support, .NET, SQL, Linux, AWS, Jenkins, Splunk, PowerShell, Git

- Provided daily operational support for enterprise applications, responding to alerts, service requests, production incidents, client-reported issues, and failed business workflows.
- Partnered with project managers and engineering teams to reproduce issues, assess business impact, identify owners, coordinate fixes, and communicate status through resolution.
- Diagnosed application, API, database, container, configuration, deployment, and infrastructure failures using logs, metrics, traces, SQL analysis, and controlled testing.
- Maintained environment baselines and supported configuration changes, application deployments, scheduled jobs, operational checklists, and release validation.
- Created support documentation, known-error records, troubleshooting guides, operational runbooks, and automated checks that improved response consistency and reduced resolution time.

Senior Production Support / DevOps Engineer | Akamai Technologies

12/2021 - 03/2023

Skills Used: Production Support, AWS, SQL, Python, PowerShell, Jenkins, CloudWatch, Docker, Kubernetes

- Supported production microservices and operational environments through proactive monitoring, incident investigation, deployment support, defect triage, and service restoration.
- Analyzed application logs and SQL data to isolate processing failures, integration defects, database issues, and mismatches between application and infrastructure behavior.
- Automated recurring support activities with Python and PowerShell, including environment checks, log collection, deployment validation, status reporting, and recovery steps.
- Supported AWS compute, containers, networking, databases, storage, monitoring, backup, and access controls as secondary infrastructure dependencies for hosted applications.
- Worked with development and QA teams on code reviews, defect remediation, release readiness, production verification, and operational handoff.

Senior Site Reliability / Application Support Engineer | Turvo India Pvt Ltd

04/2020 - 12/2021

Skills Used: SRE, Application Support, SQL, Python, Prometheus, Grafana, Splunk, AWS, Linux

- Maintained reliable application services through health monitoring, alert response, incident management, root-cause analysis, corrective action tracking, and operational automation.
- Built dashboards and actionable alerts for availability, latency, errors, throughput, saturation, job health, and data-processing outcomes.
- Developed custom Python monitoring utilities and exporters to expose application-specific health and workflow metrics for support teams.
- Investigated recurring production problems across application, database, network, container, and cloud layers and converted findings into durable fixes.
- Improved support readiness with service documentation, escalation paths, recovery procedures, maintenance plans, and post-incident reviews.

Senior Application Operations Engineer | HCL Technologies

02/2019 - 04/2020

Client: Mercedes-Benz Research & Development India

Skills Used: Application Support, .NET, SQL, Jenkins, Linux, AWS, ELK, PowerShell, Ansible

- Supported .NET and Java application environments across testing, UAT, training, and production, including deployments, configuration, troubleshooting, and release validation.
- Investigated application errors, service failures, connectivity issues, performance degradation, and data discrepancies through logs, SQL queries, and environment comparison.
- Maintained deployment procedures and automated server and application configuration with Jenkins, Ansible, PowerShell, and shell scripts.
- Monitored operational workflows and batch processes, resolved failed jobs, validated outputs, and coordinated downstream recovery activities.
- Worked with application, database, infrastructure, and project teams to prioritize incidents, implement fixes, and improve production-support procedures.

08/2016 - 12/2018

Client: HPE

Skills Used: Production Support, SQL, Linux, Python, Shell, Jenkins, AWS, Splunk, MySQL, MongoDB

- Supported enterprise applications, scheduled processing, release deployments, and operational environments through monitoring, troubleshooting, and documented recovery procedures.
- Used SQL queries and database analysis across relational and NoSQL platforms to investigate application errors, processing failures, and data-quality problems.
- Automated support tasks, deployments, configuration checks, file processing, and environment validation with Python, Bash, and shell scripting.
- Maintained Jenkins deployment pipelines, Git-managed configuration, application packages, server settings, and environment-specific release controls.
- Triaged production issues across application, database, Linux, network, and AWS dependencies and collaborated with engineering teams through resolution.

EDUCATION

B.Tech (2009-2013) in Information Technology
Prakasam Engineering College, Jawaharlal Nehru Technological University, Kakinada
