rajendranelakurthi.github.io

Lead Azure DevOps Engineer with more than a decade of enterprise CI/CD, cloud automation, infrastructure-as-code, and release engineering experience. Deep hands-on expertise building and maintaining **reusable Terraform modules**, authoring new and supporting existing **GitHub Actions workflows**, and designing governed Azure DevOps YAML pipelines for secure, repeatable cloud deployments. Strong Azure delivery background spanning identity, networking, secrets, compute, storage, monitoring, containers, and deployment governance. Proficient with AI tools and coding agents for module development, workflow authoring, test generation, troubleshooting, refactoring, and documentation, with human-review and DevSecOps controls applied to AI-generated changes.

CERTIFICATIONS

Microsoft Certified: Azure Fundamentals

Microsoft Certified: Azure DevOps Engineer Expert

AZURE DEVOPS & AUTOMATION HIGHLIGHTS

- Azure DevOps Engineering** Designed governed Azure DevOps delivery platforms with reusable YAML pipelines, service connections, environments, approvals, artifacts, and deployment controls.
- Terraform Module Engineering** Built and maintained reusable, versioned Terraform modules for repeatable Azure infrastructure deployments across multiple environments.
- GitHub Actions** Authored reusable GitHub Actions workflows for Terraform validation, planning, security checks, approvals, deployment, and post-deployment verification.
- Azure Cloud Automation** Automated Azure networking, identity, compute, storage, secrets, monitoring, and container-platform provisioning through infrastructure as code.
- AI-Accelerated Delivery** Applied AI tools and coding agents to accelerate module development, workflow authoring, test generation, troubleshooting, documentation, and peer review.

CORE TECHNOLOGIES

AZURE DEVOPS

Azure DevOps, Azure Pipelines, Azure Repos, Azure Artifacts, Boards, YAML pipelines, environments, approvals, service connections

GITHUB AUTOMATION

GitHub Actions, reusable workflows, composite actions, workflow_call, environments, branch protection, pull requests, OIDC

TERRAFORM

Reusable modules, module versioning, remote state, state locking, workspaces, providers, variables, outputs, plan/apply governance

MICROSOFT AZURE

Azure Resource Manager, Virtual Networks, Private Endpoints, Entra ID, Managed Identities, Key Vault, Storage, AKS, Azure Monitor

AI ENGINEERING

GitHub Copilot, AI coding agents, prompt engineering, code generation, test generation, troubleshooting, documentation automation

DEVSECOPS

Terraform validation, Checkov, tfsec, SonarQube, Fortify, Black Duck, secrets management, policy gates, least privilege

SCRIPTING

PowerShell, Bash, Python, Azure CLI, JSON, YAML

CONTAINERS

Docker, Kubernetes, AKS, Helm, container registries

SOURCE CONTROL

Git, GitHub, Azure Repos, trunk-based development, GitFlow, pull requests, code reviews

OBSERVABILITY

Azure Monitor, Log Analytics, Application Insights, Grafana, Prometheus, pipeline telemetry

PROFESSIONAL EXPERIENCE

Lead Azure DevOps Engineer | [AT&T Services Inc.](#)

08/2023 - Present

Skills Used: Azure, Azure DevOps, Azure Pipelines, GitHub Actions, Terraform, PowerShell, Python, Docker, AKS, AI Coding Agents

- Designed and maintained reusable Terraform modules for Azure networking, identity, compute, storage, Key Vault, monitoring, and container-platform services, with versioned interfaces and clear consumer documentation.
- Built reusable GitHub Actions workflows that executed Terraform formatting, validation, security scanning, plan generation, approval, apply, and post-deployment verification across controlled Azure environments.
- Implemented secure GitHub-to-Azure authentication using OpenID Connect and workload identity federation, eliminating long-lived cloud credentials from deployment workflows.
- Engineered multi-stage Azure DevOps YAML pipelines with templates, variable groups, service connections, artifacts, environment checks, manual approvals, and release promotion controls.
- Standardized Terraform engineering practices covering remote state, state locking, provider constraints, module versioning, input validation, outputs, plan review, and environment isolation.
- Used GitHub Copilot and AI coding agents to accelerate Terraform module scaffolding, workflow development, validation testing, troubleshooting, refactoring, and technical documentation.
- Established human-review and security guardrails for AI-generated infrastructure code, requiring peer approval, static analysis, policy validation, and controlled execution before deployment.
- Created automated quality gates for Terraform and pipeline code using linting, security scanning, pull-request checks, branch protection, and evidence-producing deployment approvals.
- Automated Azure platform administration and deployment support with PowerShell, Python, Azure CLI, YAML, and JSON, reducing manual configuration and improving repeatability.
- Worked independently with application, security, and infrastructure teams to resolve Azure DevOps pipeline, Terraform state, service-connection, permission, and deployment issues.

Senior Azure DevOps Engineer | [GlobalLogic](#)

03/2023 - 08/2023

Skills Used: Azure DevOps, Azure Pipelines, GitHub Actions, Terraform, Git, PowerShell, Docker

- Developed Azure DevOps YAML templates and GitHub Actions reusable workflows to standardize application and Terraform delivery across engineering teams.
- Created and maintained Terraform modules with consistent variables, outputs, naming, tagging, security defaults, and semantic versioning.
- Configured hosted and self-hosted build agents, workload-specific pools, pipeline permissions, caching, artifacts, and execution policies for reliable delivery.
- Implemented Git branching, pull-request, code-review, approval, and protected-branch standards across Azure Repos and GitHub repositories.
- Troubleshoot pipeline, Terraform, authentication, artifact, and deployment failures and documented repeatable remediation procedures.

Senior DevOps Engineer - Azure Automation | [Akamai Technologies](#)

12/2021 - 03/2023

Skills Used: Azure, GitHub Actions, Terraform, PowerShell, Python, Docker, Kubernetes

- Authored and maintained GitHub Actions workflows for continuous integration, infrastructure validation, artifact management, and controlled cloud deployments.
- Provisioned cloud environments with reusable Terraform modules and pipeline-driven infrastructure-as-code patterns.
- Developed PowerShell and Python automation for environment configuration, operational checks, deployment support, and recovery workflows.
- Built delivery dashboards and pipeline telemetry to improve visibility into workflow health, failures, approvals, and release readiness.
- Resolved complex build and deployment issues across distributed engineering teams while maintaining clear operational documentation.

Senior DevOps / Site Reliability Engineer | [Turvo India Pvt Ltd](#)

04/2020 - 12/2021

Skills Used: Azure, GitHub Actions, Terraform, Python, Kubernetes, Prometheus, Grafana

- Standardized GitHub Actions workflow patterns to reduce pipeline drift and accelerate software and infrastructure delivery.
- Designed reusable Terraform solutions for repeatable platform provisioning and environment promotion.
- Integrated security, quality, and observability controls into CI/CD workflows to improve deployment confidence and operational readiness.
- Automated reliability checks, monitoring, and incident diagnostics with Python, Prometheus, and Grafana.

Senior Azure DevOps Engineer | [HCL Technologies](#)

02/2019 - 04/2020

Client: Mercedes-Benz Research & Development India

Skills Used: Azure DevOps, Azure Pipelines, Git, PowerShell, Terraform, Docker, Helm

- Built continuous-delivery pipelines for multi-environment application releases using reusable templates and governed promotion controls.
- Automated infrastructure configuration with Terraform and PowerShell to improve auditability and repeatability.
- Implemented source-control, branching, artifact-versioning, and release-governance practices for application teams.
- Created deployment guides and runbooks and supported production releases across complex enterprise environments.

Azure DevOps Engineer | [Mphasis Ltd](#)

08/2016 - 12/2018

Client: HPE

Skills Used: Azure DevOps, Terraform, Git, PowerShell, Python, YAML, JSON

- Authored and maintained reusable Terraform modules and executed infrastructure changes through automated CI/CD workflows.
- Built YAML-based build and release pipelines with event-driven triggers, artifact promotion, environment selection, and deployment controls.
- Developed branching strategies and pull-request standards to improve release governance and code promotion.
- Automated configuration and deployment activities with PowerShell and Python and maintained shared operational scripts.
- Supported self-hosted build agents and diagnosed pipeline execution, dependency, and environment issues.

EDUCATION

B.Tech (2009-2013) in Information Technology
Prakasam Engineering College, Jawaharlal Nehru Technological University, Kakinada
