

RAJENDRA PRASAD N

SENIOR DEVOPS ENGINEER WITH KUBERNETES & AZURE CLOUD

rajendran.scm@gmail.com

+1 (469) 926-4201

Dallas, TX

linkedin.com/in/rajendranelakurthi

rajendranelakurthi.github.io

DevOps engineer with 10+ years of enterprise experience in Azure cloud, Kubernetes operations, CI/CD, deployment automation, and production support. Engineers AKS platforms, Azure DevOps and GitHub Actions pipelines, Terraform infrastructure, and Helm/GitOps delivery workflows. Integrates automated testing, vulnerability scanning, identity controls, observability, and release verification into application delivery. Develops PowerShell, Python, and Bash tooling; mentors engineers, coordinates cross-team releases, and serves as an escalation resource for critical platform and deployment incidents.

CERTIFICATIONS

GitLab Certified Associate

Microsoft Certified: Azure Fundamentals

Microsoft Certified: Azure DevOps Engineer Expert

AWS Certified Solutions Architect - Associate

MuleSoft Certified Developer - Level 1

KUBERNETES, AZURE & DELIVERY HIGHLIGHTS

- Kubernetes Operations:** Node-pool maintenance, workload scheduling, secure configuration, scaling, and recovery procedures support resilient AKS services.
- Delivery Engineering:** Reusable pipelines and Helm deployment patterns connect tests, security checks, approval gates, release promotion, and rollback readiness.
- Platform Reliability:** Actionable telemetry, incident diagnostics, operational runbooks, and engineer mentoring strengthen production support and release consistency.

CORE TECHNOLOGIES

AZURE CLOUD & IAC

AKS, ACR, Azure VMs, Virtual Networks, Azure SQL, Key Vault, Entra ID, Azure Monitor, Terraform, Ansible, reusable infrastructure modules

KUBERNETES ADMINISTRATION

Node pools, upgrades, Deployments, StatefulSets, DaemonSets, Jobs/CronJobs, namespaces, quotas, RBAC, service accounts, rollout management

KUBERNETES RELIABILITY

HPA, cluster autoscaler, resource requests/limits, taints/tolerations, affinity, topology spread, disruption budgets, startup/readiness/liveness probes

NETWORKING, STORAGE & SECRETS

Services, ingress, DNS, network policies, TLS, persistent volumes/claims, StorageClasses, Azure Disk/Files CSI, Workload Identity, Key Vault CSI

CI/CD & GITOPS

Azure DevOps, GitHub, GitHub Actions, Jenkins, YAML templates, Git branching, pull requests, Docker, Helm, Argo CD, artifact promotion, release management

DEVSECOPS & ACCESS

SonarQube, SAST, SCA, image/secrets scanning, policy checks, compliance validation, least privilege, OIDC, managed identities, protected approvals

MONITORING & AUTOMATION

Prometheus, Grafana, Azure Monitor, Log Analytics, Container Insights, alerts, logs, PowerShell, Python, Bash, Azure CLI, kubectl

PRODUCTION & TEAM ENABLEMENT

Troubleshooting, root-cause analysis, high availability, recovery drills, release runbooks, critical incident escalation, mentoring, technology evaluation

PROFESSIONAL EXPERIENCE

Lead DevOps Engineer | AT&T Services Inc.

08/2023 - Present

Skills Used: Azure, AKS, Kubernetes, Azure DevOps, GitHub Actions, Terraform, Helm, Argo CD, Python, Prometheus

- Engineered Azure DevOps and GitHub Actions pipelines for enterprise builds, tests, scans, artifact publication, deployment approvals, release promotion, and post-deployment verification.
- Designed reusable YAML templates and deployment automation frameworks with versioned inputs, standard checks, controlled credentials, and consistent rollback procedures for application teams.
- Provisioned and administered AKS clusters with Terraform, managing system and user node pools, Azure networking, registry access, cluster identities, and environment configuration.
- Planned AKS and node-image upgrades through compatibility checks, nonproduction validation, maintenance windows, drain testing, and post-upgrade workload verification.
- Managed Kubernetes Deployments, StatefulSets, DaemonSets, Jobs, and CronJobs, troubleshooting scheduling, controller behavior, failed rollouts, and application configuration.
- Standardized Helm charts and Argo CD delivery patterns with versioned values, manifest validation, sync sequencing, configuration-drift visibility, and Git-based recovery.
- Tuned resource requests and limits, HPA settings, and cluster autoscaling from observed workload demand; used taints, tolerations, and affinity to isolate appropriate workloads.

- Improved application resilience through multi-zone node placement, topology spread, startup/readiness/liveness probes, and disruption budgets for voluntary maintenance.
- Configured Kubernetes Services, ingress routes, TLS, DNS, and network policies; diagnosed unreachable endpoints, service-discovery failures, and blocked pod-to-service traffic.
- Administered persistent volumes, claims, StorageClasses, and Azure Disk/Files CSI integrations; investigated pending claims, mount failures, storage permissions, and recovery procedures.
- Implemented Entra Workload Identity, Kubernetes RBAC, service accounts, and Key Vault CSI access, restricting secrets and cloud-resource permissions to required workloads.
- Embedded automated tests, SonarQube analysis, dependency/image scanning, secrets detection, and infrastructure policy checks into delivery gates with approval and exception evidence.
- Built Azure Monitor, Container Insights, Prometheus, and Grafana dashboards for node pressure, restarts, API errors, deployment duration, latency, and resource saturation.
- Served as an escalation resource for CrashLoopBackOff, OOMKilled, ImagePullBackOff, Pending pods, and node-health failures; correlated events, logs, metrics, and recent changes during root-cause analysis.
- Developed PowerShell, Python, and Bash tooling for deployment checks and incident diagnostics; mentored engineers, maintained runbooks, and evaluated platform improvements through focused proof-of-concepts.

Senior DevOps Engineer | [GlobalLogic](#)

03/2023 - 08/2023

Skills Used: Azure DevOps, GitHub Actions, AKS, Docker, Helm, Terraform, Ansible, PowerShell

- Built reusable Azure DevOps and GitHub Actions workflows for application build, testing, artifact promotion, environment approvals, and release validation.
- Automated Azure environment setup with Terraform and Ansible, standardizing network access, runtime prerequisites, configuration, and secure service connections.
- Containerized services with Docker and deployed AKS workloads through Helm, validating manifests, probes, configuration values, and rollout status.
- Configured namespaces, service accounts, resource quotas, and deployment permissions to separate team workloads and control environment access.
- Diagnosed image-pull, pod-startup, readiness, and networking failures with kubectl, container logs, and application-team input.
- Integrated quality and vulnerability checks into pipelines and partnered with developers and QA to improve smoke tests, deployment documentation, and rollback readiness.

Senior DevOps Engineer II | [Akamai Technologies](#)

12/2021 - 03/2023

Skills Used: Azure, Kubernetes, Argo CD, Helm, Terraform, GitHub Actions, Python, Azure Monitor

- Provisioned Azure platform infrastructure through reusable Terraform definitions and reviewed changes for networking, identities, compute, and monitoring.
- Delivered Kubernetes microservices through Argo CD and Helm, maintaining environment-specific values, deployment traceability, and service-health verification.
- Built GitHub Actions and Jenkins workflows for reproducible builds, tests, container packaging, artifact publication, and controlled releases.
- Supported Kubernetes workload scheduling and capacity reviews, adjusting resource settings and investigating pod restarts, node pressure, and failed deployments.
- Implemented cloud dashboards, centralized logs, and actionable alerts to expose application health and deployment-related degradation.
- Automated Linux/Windows checks with Python, PowerShell, and Bash and maintained recovery runbooks for platform, network, and application incidents.

Senior DevOps Engineer / Senior SRE | [Turvo India Pvt Ltd](#)

04/2020 - 12/2021

Skills Used: Azure, Kubernetes, Jenkins, Ansible, Terraform, Prometheus, Grafana, Python

- Designed CI/CD and infrastructure automation for enterprise applications using Jenkins, GitHub Actions, Terraform, and versioned deployment inputs.
- Authored Helm charts for consistent Kubernetes application delivery, maintaining ConfigMaps, secrets references, Services, and workload health checks.
- Developed Ansible roles for highly available Prometheus, Grafana, and Node Exporter stacks and Python exporters for application-specific metrics.
- Built internal FastAPI tooling to integrate Jenkins, Jira, and JFrog onboarding, operational checks, and deployment status.
- Supported container and platform incident response through log analysis, resource diagnostics, service verification, and recovery coordination.
- Partnered with developers on release readiness and retrospectives, sharing troubleshooting practices and improving operational runbooks.

Senior DevOps Engineer | [HCL Technologies](#)

02/2019 - 04/2020

Client: Mercedes-Benz Research & Development India

Skills Used: Azure, Kubernetes, Docker, Helm, Jenkins, Ansible, PowerShell, Linux

- Built enterprise delivery pipelines for Java applications and REST microservices across development, test, UAT, and production environments.
- Deployed Kubernetes workloads with Helm and version-controlled manifests, managing namespaces, configuration, Services, and environment promotion.
- Automated Azure and application-host configuration with Ansible and PowerShell, validating runtime prerequisites, permissions, and connectivity.
- Troubleshoot failed deployments, application-server issues, certificates, database access, and container networking with development and infrastructure teams.
- Implemented centralized logging and documented deployment sequences, change approvals, customer updates, and recovery procedures.

DevOps Engineer | [Mphasis Ltd](#)

08/2016 - 12/2018

Client: HPE

Skills Used: Azure, Jenkins, Git, Ansible, Linux, Shell, Python, Healthcare Payer

- Supported Healthcare Payer enrollment, eligibility, and claims-service releases within Mphasis/HPE using controlled deployment and verification procedures.
- Developed Ansible, Shell, and Python automation for application setup, configuration changes, service control, and post-release checks.
- Maintained Linux application and build servers, investigating failed processes, permissions, deployment dependencies, and batch-job issues.
- Managed Git branches, release tags, and versioned artifacts and coordinated application, API, database, and UI deployment sequencing.
- Worked with development, QA, and support teams on release windows, smoke tests, incident follow-up, and operational handover.

EDUCATION

B.Tech (2009-2013) in Information Technology

Prakasam Engineering College, Jawaharlal Nehru Technological University, Kakinada
