rajendranelakurthi.github.io

Senior DevOps / Site Reliability Engineer with 10+ years of experience in enterprise application delivery and production operations. Specializes in **Jenkins CI/CD, application observability, on-call support, incident management, troubleshooting, and root cause analysis.** Builds reusable pipelines and operational tooling with Groovy, Python, Bash, and PowerShell; investigates application and infrastructure failures across Linux, containers, and Azure/AWS environments. Partners with developers and infrastructure teams to improve release readiness, reduce recurring operational work, and maintain reliable services.

CERTIFICATIONS

GitLab Certified Associate

Microsoft Certified: Azure Fundamentals

Microsoft Certified: Azure DevOps Engineer Expert

AWS Certified Solutions Architect - Associate

MuleSoft Certified Developer - Level 1

SITE RELIABILITY & JENKINS DELIVERY HIGHLIGHTS

- Jenkins Engineering** Standardized Jenkinsfiles, shared libraries, build agents, test gates, and artifact promotion for repeatable application deployments.
- Production Reliability** Correlated application logs and platform metrics during incidents; maintained actionable alerts, recovery procedures, and root cause follow-up.
- Operational Automation** Developed Python integrations and scripting utilities for onboarding, deployment checks, diagnostics, and recurring support tasks.

CORE TECHNOLOGIES

PRODUCTION SUPPORT & INCIDENT RESPONSE

On-call rotations, alert triage, incident management, service restoration, escalation, root cause analysis, post-incident actions, operational readiness, recovery runbooks

OBSERVABILITY, LOGGING & ALERTING

Prometheus, Grafana, ELK, Azure Monitor, Log Analytics, Application Insights, CloudWatch, application health, latency/error monitoring, dashboards, actionable alerts

CLOUD & RELEASE RELIABILITY

Azure/AWS, Terraform, configuration management, Key Vault/IAM, secure pipeline credentials, SonarQube, JFrog Artifactory/Xray, release evidence, development/infrastructure collaboration

JENKINS & CI/CD

Jenkinsfiles, Declarative Pipeline, Groovy shared libraries, multibranch jobs, agent administration, credentials binding, build/test stages, artifact promotion, deployment gates, rollback

ENTERPRISE APPLICATION OPERATIONS

Linux services, processes, permissions, resource diagnostics, DNS/TLS/connectivity, Docker, Kubernetes, deployment validation, database dependencies, capacity troubleshooting

PROGRAMMING & DEBUGGING

Python, Bash, PowerShell, Groovy, REST APIs, FastAPI, Java/Maven build diagnostics, SQL checks, code review, automated tests, application log and stack-trace analysis

PROFESSIONAL EXPERIENCE

Lead SRE | AT&T Services Inc.

08/2023 - Present

Skills Used: Jenkins, Groovy, Python/Bash/PowerShell, Prometheus/Grafana, On-Call, Azure/AWS

- Participated in on-call rotations, triaging alerts and coordinating incident escalation, mitigation, and recovery verification with development and infrastructure teams.
- Built Jenkins CI/CD pipelines with versioned Jenkinsfiles and Groovy shared libraries for application builds, automated tests, artifact publication, and controlled production releases.
- Supported Azure/AWS application environments, diagnosing Kubernetes, networking, identity, and database-connectivity issues during production incidents.
- Maintained recovery runbooks and support handoffs; coached engineers on Jenkins troubleshooting and incident analysis while coordinating release readiness.
- Added Jenkins release gates for test results, vulnerability checks, configuration validation, and rollback readiness, improving operational handoff to support teams.
- Implemented application health dashboards and alerts with Azure Monitor, Application Insights, Prometheus, and Grafana, correlating latency, errors, and resource utilization.
- Performed root cause analysis using application logs, stack traces, deployment history, and Linux diagnostics; tracked corrective actions to address recurring failures.
- Developed Python, Bash, and PowerShell utilities for health checks, deployment validation, and diagnostic collection; reviewed and tested automation before production use.
- Administered Jenkins agents, credentials, job configuration, and tool dependencies; resolved queue delays, workspace failures, and unreliable build execution.

Senior DevOps Engineer | GlobalLogic

03/2023 - 08/2023

Skills Used: Jenkins, Groovy, Bash/PowerShell, Azure Monitor, CloudWatch, Production Support

- Participated in on-call support, assessing incident impact, escalating application failures, and verifying service restoration with engineering teams.
- Created Jenkins pipelines for compilation, automated tests, package publication, and deployment approvals across development, QA, and production.
- Supported enterprise application releases with health checks, environment validation, and rollback procedures before and after production deployment.
- Performed root cause reviews for failed releases and production issues, documenting evidence and preventive fixes with development and infrastructure owners.
- Published Jenkins onboarding and production-support runbooks, standardizing escalation paths, release checks, and operational handoffs.
- Configured application dashboards and alert rules using Azure Monitor and CloudWatch; correlated error logs with infrastructure events during investigations.
- Maintained Azure/AWS environment parameters and protected pipeline credentials, troubleshooting deployment permissions and runtime connectivity.
- Maintained Jenkins Linux/Windows agents and build tooling; debugged dependency, credential, disk-capacity, and connectivity failures affecting delivery.
- Debugged Jenkinsfile and script failures with Groovy, Bash, and PowerShell; validated fixes through test jobs and reviewed source changes.

Senior DevOps Engineer II | Akamai Technologies

12/2021 - 03/2023

Skills Used: Jenkins, Groovy, Python/PowerShell, AKS/EKS, Observability, On-Call

- Participated in production on-call support, diagnosing application errors, deployment regressions, and network failures with developers and platform teams.
- Built and supported Jenkins CI/CD workflows for application and infrastructure changes, incorporating tests, artifact versioning, and deployment verification.
- Updated incident playbooks and troubleshooting documentation; shared operational findings to improve deployment practices and service reliability.
- Monitored service health with Azure Monitor, Log Analytics, Prometheus/Grafana, and CloudWatch; tuned alert thresholds against observed application behavior.
- Developed reusable Jenkins stages and Groovy helpers for environment configuration and release checks; investigated agent and pipeline failures.
- Wrote Python and PowerShell tools for API health checks, log collection, and recurring support tasks; debugged scripts and validated error handling.
- Supported containerized applications on Azure AKS and AWS EKS, investigating restart loops, readiness failures, and CPU/memory pressure.
- Maintained release readiness checks for configuration, identity, and database dependencies; verified rollback plans and post-deployment application behavior.
- Correlated logs, metrics, configuration changes, and release history to identify root causes; documented corrective actions and verified recovery.

Senior DevOps Engineer / Senior SRE | Turvo India Pvt Ltd

04/2020 - 12/2021

Skills Used: CloudBees Jenkins, Python/FastAPI, JFrog, Prometheus/Grafana, On-Call, Azure/AWS

- Participated in on-call rotations for SaaS workloads, managing incident triage, escalation, recovery actions, and verified handoff to support teams.
- Maintained production-readiness checklists, incident runbooks, and release evidence; aligned engineering and infrastructure teams on operational improvements.
- Performed root cause analysis across application logs, Jenkins outputs, and infrastructure changes; partnered with developers on fixes and regression checks.
- Used Prometheus/Grafana and CloudWatch dashboards to monitor application health, investigate errors, and identify Kubernetes resource constraints.
- Administered CloudBees Jenkins and developed shared libraries for SaaS and payment-platform CI/CD, standardizing build, test, package, and release stages.
- Developed Python FastAPI integrations for Jenkins, Jira, and JFrog to automate onboarding, release coordination, and recurring operational workflows.
- Automated Linux diagnostics and recovery tasks with Bash, Python, and Ansible, reducing repetitive production-support work.
- Supported Azure/AWS application and database dependencies, validating connectivity, environment configuration, and release recovery procedures.
- Integrated SonarQube, JFrog Artifactory, and Xray into Jenkins delivery, validating code quality, artifact versions, and security results before promotion.

Senior DevOps Engineer | HCL Technologies

02/2019 - 04/2020

Client: Mercedes-Benz Research & Development India

Skills Used: Jenkins, Java/Maven, Bash/PowerShell, ELK, CloudWatch, Production Support

- Provided on-call production support, triaging incidents, coordinating escalation, and validating restored application functionality.
- Documented incident findings, recovery procedures, and Jenkins troubleshooting guidance to improve operational readiness and team handoffs.
- Monitored application health using ELK, Azure Monitor, Log Analytics, and CloudWatch; correlated logs and alerts with recent deployment changes.
- Built Jenkins and Maven pipelines for Java REST microservices with automated tests, security validation, and gated UAT/production promotion.
- Maintained Jenkins job configuration, agents, credentials, and deployment scripts; investigated failed builds and application-release errors.
- Investigated Java application logs, stack traces, Linux services, and network connectivity to identify root causes with development teams.
- Developed Bash and PowerShell automation for environment checks and deployment diagnostics; tested fixes to scripts and Jenkins pipeline logic.
- Supported Azure/AWS infrastructure and Kubernetes-hosted services, resolving configuration, permission, and database-connectivity failures.
- Validated artifacts, deployment parameters, health checks, and rollback steps before release; captured post-deployment verification evidence.

DevOps Engineer | Mphasis Ltd

08/2016 - 12/2018

Client: HPE

Skills Used: Jenkins, Git, Python/Bash/PowerShell, CloudWatch, Linux, On-Call

- Participated in on-call production support, assessing alerts, escalating incidents, and coordinating recovery with development and infrastructure teams.
- Created Jenkins build and deployment pipelines for API, database, and UI components, promoting versioned artifacts across environments.
- Monitored application logs and Azure/AWS infrastructure telemetry, using CloudWatch and operational dashboards to investigate service degradation.
- Supported Azure/AWS application environments, validating infrastructure readiness, access permissions, and database connectivity before releases.
- Added Jenkins artifact validation and post-deployment checks, confirming application health and required configuration during environment promotion.
- Maintained production-support runbooks and release handover records, preserving troubleshooting steps, recovery actions, and verification results.
- Configured Jenkins jobs, Git integration, and build agents; diagnosed compilation, dependency, credential, and deployment failures.
- Developed Python, Bash, and PowerShell scripts for deployment checks and administration tasks; debugged failures and verified corrective changes.
- Performed root cause investigations using build logs, configuration comparisons, and Linux diagnostics; documented fixes and follow-up actions.

EDUCATION

B.Tech (2009-2013) in Information Technology

Prakasam Engineering College, Jawaharlal Nehru Technological University, Kakinada
