rajendranelakurthi.github.io

Lead SRE with 10+ years of experience in production operations, cloud platforms, and enterprise delivery. Advances engineering-led operations through **SLIs/SLOs, error budgets, observability, toil reduction, and AIOps**. Builds service-health dashboards and automation with Python, Terraform, Ansible, and Jenkins; correlates metrics, logs, and traces to guide incident response and reliability improvements. Leads production-readiness reviews, resiliency initiatives, and operational enablement across Azure/AWS and on-premises services, partnering with application, infrastructure, security, and governance teams.

CERTIFICATIONS

GitLab Certified Associate

Microsoft Certified: Azure Fundamentals

Microsoft Certified: Azure DevOps Engineer Expert

AWS Certified Solutions Architect - Associate

MuleSoft Certified Developer - Level 1

RELIABILITY ENGINEERING & INTELLIGENT OPERATIONS HIGHLIGHTS

- Observability & AIOps** Automated dashboards and telemetry correlation; applied anomaly detection and actionable alerting to surface reliability risks and reduce operational noise.
- SLO-Driven Reliability** Defined service-health indicators, error-budget policies, and reliability reviews to prioritize remediation with application and infrastructure teams.
- Toil Reduction** Developed reusable remediation workflows, IaC modules, and Jenkins patterns; converted recurring support tasks into reviewed engineering automation.

CORE TECHNOLOGIES

AIOPS & OPERATIONAL INTELLIGENCE

Event correlation, anomaly detection, predictive capacity trends, noise reduction, telemetry enrichment, automated remediation, service health analytics

SRE STANDARDS & SERVICE HEALTH

SLIs, SLOs, error budgets, burn-rate alerts, reliability metrics, production readiness, maturity reviews, capacity planning, post-incident learning

SECURITY, GOVERNANCE & ENABLEMENT

IAM/RBAC, Key Vault, least privilege, vulnerability remediation, audit evidence, runbooks, mentoring, stakeholder reporting, reliability reviews, operational standards

RESILIENCY & PLATFORM OPERATIONS

Azure/AWS, Linux, Docker, Kubernetes, secondary-region readiness, failover validation, network observability, GenAI platform health, incident triage, RCA

ENTERPRISE OBSERVABILITY

Prometheus, Grafana, Azure Monitor, Log Analytics/KQL, Application Insights, ELK, CloudWatch, metrics/logs/traces, synthetic monitoring, dashboard automation

AUTOMATION, IAC & CI/CD

Python, Bash, PowerShell, Terraform modules, Ansible, Jenkinsfiles, Groovy shared libraries, policy-as-code, validation gates, event-driven operational workflows

PROFESSIONAL EXPERIENCE

Lead SRE | AT&T Services Inc.

08/2023 - Present

Skills Used: SLIs/SLOs, AIOps, Grafana, Azure Monitor/KQL, Python, Terraform/Ansible, Jenkins, Azure/AWS

- Defined availability, latency, and error-rate SLIs/SLOs with Development and Infrastructure teams; established error-budget policies to prioritize reliability work and release decisions.
- Automated enterprise service-health dashboards with Grafana, Azure Monitor Workbooks, and KQL, exposing SLO trends, incidents, and readiness risks to technical and business stakeholders.
- Implemented metrics, logs, traces, and synthetic monitoring with Prometheus, Application Insights, ELK, and CloudWatch; reviewed instrumentation and logging changes with application owners.
- Applied AIOps event correlation and anomaly detection to group related alerts and reduce noise; used capacity trends to identify bottlenecks and guide proactive remediation.
- Built Python/PowerShell remediation workflows and Terraform/Ansible modules; tracked toil with support teams and automated recurring checks with validation and escalation safeguards.
- Led high-impact incident triage and root cause investigations with Problem Management; modeled failure scenarios, documented corrective actions, and drove post-incident reliability reviews.
- Coordinated secondary-region readiness and failover checks; expanded network observability and GenAI platform health monitoring for latency, errors, capacity, and dependency availability.
- Embedded IAM, policy-as-code, vulnerability checks, and audit evidence in Jenkins CI/CD and cloud operations; partnered with Security and Governance on remediation priorities.
- Mentored engineers and led operational-maturity reviews, establishing production-readiness standards and communicating reliability tradeoffs across platform, application, and infrastructure teams.

Senior DevOps Engineer | GlobalLogic

08/2023 - 08/2023

Skills Used: Jenkins, Groovy, Bash/PowerShell, Azure Monitor, CloudWatch, Production Support, Reliability Metrics, Automation

- Participated in on-call support, assessing incident impact, escalating application failures, and verifying service restoration with engineering teams.
- Created Jenkins pipelines for compilation, automated tests, package publication, and deployment approvals across development, QA, and production.
- Assessed monitoring coverage for new application releases, validating dashboards, synthetic health checks, alert routing, and rollback readiness with developers.
- Performed root cause reviews for failed releases and production issues, documenting evidence and preventive fixes with development and infrastructure owners.
- Tracked service latency, error rates, and availability against SLIs/SLOs; published health reports to prioritize operational intervention.

- Configured application dashboards and alert rules using Azure Monitor and CloudWatch; correlated error logs with infrastructure events during investigations.
- Standardized incident escalation and ownership mapping, linking alert context to service runbooks and verified recovery steps for support handoffs.
- Maintained Jenkins Linux/Windows agents and build tooling; debugged dependency, credential, disk-capacity, and connectivity failures affecting delivery.
- Debugged Jenkinsfile and script failures with Groovy, Bash, and PowerShell; validated fixes through test jobs and reviewed source changes.

Senior DevOps Engineer II | Akamai Technologies

12/2021 - 03/2023

Skills Used: Jenkins, Groovy, Python/PowerShell, AKS/EKS, Observability, On-Call, Reliability Metrics, Automation

- Participated in production on-call support, diagnosing application errors, deployment regressions, and network failures with developers and platform teams.
- Built and supported Jenkins CI/CD workflows for application and infrastructure changes, incorporating tests, artifact versioning, and deployment verification.
- Instrumented application requests with correlated logs and traces; reviewed telemetry coverage and synthetic probes with development partners.
- Monitored service health with Azure Monitor, Log Analytics, Prometheus/Grafana, and CloudWatch; tuned alert thresholds against observed application behavior.
- Tuned alert routing and suppression to distinguish actionable service failures from transient infrastructure events, improving signal quality during on-call response.
- Wrote Python and PowerShell tools for API health checks, log collection, and recurring support tasks; debugged scripts and validated error handling.
- Supported containerized applications on Azure AKS and AWS EKS, investigating restart loops, readiness failures, and CPU/memory pressure.
- Defined service indicators and SLO thresholds for release readiness; reviewed capacity, dependency failures, and error-budget impact with application teams.
- Correlated logs, metrics, configuration changes, and release history to identify root causes; documented corrective actions and verified recovery.

Senior DevOps Engineer / Senior SRE | Turvo India Pvt Ltd

04/2020 - 12/2021

Skills Used: CloudBees Jenkins, Python/FastAPI, JFrog, Prometheus/Grafana, On-Call, Azure/AWS, Reliability Metrics, Automation

- Participated in on-call rotations for SaaS workloads, managing incident triage, escalation, recovery actions, and verified handoff to support teams.
- Developed Python FastAPI integrations for Jenkins, Jira, and JFrog; tracked operational toil and automated onboarding and repetitive release coordination.
- Performed root cause analysis across application logs, Jenkins outputs, and infrastructure changes; partnered with developers on fixes and regression checks.
- Used Prometheus/Grafana and CloudWatch dashboards to monitor application health, investigate errors, and identify Kubernetes resource constraints.
- Defined payment-service SLIs and SLO reporting with application owners, prioritizing reliability backlog items using service-health trends.
- Reviewed post-incident remediation progress and deployment risk with engineering leads; captured preventive controls and validation evidence.
- Administered CloudBees Jenkins agents and shared libraries, resolving execution failures and maintaining reproducible tooling for operational automation.
- Supported Azure/AWS application and database dependencies, validating connectivity, environment configuration, and release recovery procedures.
- Integrated SonarQube, JFrog Artifactory, and Xray into Jenkins delivery, validating code quality, artifact versions, and security results before promotion.

Senior DevOps Engineer | HCL Technologies

02/2019 - 04/2020

Client: Mercedes-Benz Research & Development India

Skills Used: Jenkins, Java/Maven, Bash/PowerShell, ELK, CloudWatch, Production Support, Reliability Metrics, Automation

- Provided on-call production support, triaging incidents, coordinating escalation, and validating restored application functionality.
- Documented incident findings, recovery procedures, and Jenkins troubleshooting guidance to improve operational readiness and team handoffs.
- Enhanced ELK, Azure Monitor, and CloudWatch monitoring with application owners; reviewed latency/error dashboards, alert thresholds, and coverage for new deployments.
- Built Jenkins and Maven pipelines for Java REST microservices with automated tests, security validation, and gated UAT/production promotion.
- Maintained Jenkins job configuration, agents, credentials, and deployment scripts; investigated failed builds and application-release errors.
- Used Ansible to standardize Linux configuration and detect environment drift, validating corrective changes before production rollout.
- Developed Bash and PowerShell automation for environment checks and deployment diagnostics; tested fixes to scripts and Jenkins pipeline logic.
- Supported Azure/AWS infrastructure and Kubernetes-hosted services, resolving configuration, permission, and database-connectivity failures.
- Partnered with security teams on vulnerability remediation and deployment permissions; preserved change validation and access evidence for operational reviews.

DevOps Engineer | Mphasis Ltd

08/2016 - 12/2018

Client: HPE

Skills Used: Jenkins, Git, Python/Bash/PowerShell, CloudWatch, Linux, On-Call, Reliability Metrics, Automation

- Participated in on-call production support, assessing alerts, escalating incidents, and coordinating recovery with development and infrastructure teams.
- Created Jenkins build and deployment pipelines for API, database, and UI components, promoting versioned artifacts across environments.
- Monitored application logs and Azure/AWS infrastructure telemetry, using CloudWatch and operational dashboards to investigate service degradation.
- Established deployment-monitoring coverage checks, verifying log collection, alert ownership, and application-health validation with development teams.
- Added Jenkins artifact validation and post-deployment checks, confirming application health and required configuration during environment promotion.
- Investigated recurring incidents, low-level errors, and resource bottlenecks; partnered with developers and infrastructure teams on corrective actions.
- Configured Jenkins jobs, Git integration, and build agents; diagnosed compilation, dependency, credential, and deployment failures.
- Developed Python, Bash, and PowerShell scripts for deployment checks and administration tasks; debugged failures and verified corrective changes.
- Standardized Jenkins release validation and operational handoffs, documenting monitoring coverage, escalation procedures, and verified recovery steps.

EDUCATION

B.Tech (2009-2013) in Information Technology

Prakasam Engineering College, Jawaharlal Nehru Technological University, Kakinada
