rajendranelakurthi.github.io

Lead Azure DevOps Engineer with 10+ years of enterprise infrastructure, CI/CD automation, Kubernetes engineering, and production operations experience. Builds **Azure GitOps** delivery with **Argo CD**, **GitHub Actions**, **Helm**, **AKS**, and **Terraform**. Standardizes reusable workflows, version-controlled environment configuration, container builds, release promotion, and deployment validation. Administers build runners and **Kubernetes** services, embeds **security** and artifact-quality controls, and troubleshoots pipeline, infrastructure, and application failures. Partners with engineering teams on Git-based change governance, observability, operational readiness, and developer self-service using Python, PowerShell, and Bash.

CERTIFICATIONS

Microsoft Certified: Azure DevOps Engineer Expert

Microsoft Certified: Azure Fundamentals

GitLab Certified Associate

AWS Certified Solutions Architect - Associate

GITOPS & CI/CD PLATFORM HIGHLIGHTS

- Reusable GitHub Actions** Standardizes build, test, artifact publication, runner configuration, and environment promotion workflows across application teams.
- Azure GitOps Delivery** Uses **Argo CD** and **Helm** to maintain versioned **AKS** configuration, deployment health checks, and validated release recovery paths.
- Secure Platform Operations** Combines **Terraform**, **Kubernetes** access controls, image validation, **monitoring**, and incident diagnostics for maintainable Azure platforms.

CORE TECHNOLOGIES

GITOPS ADMINISTRATION

Argo CD, **Helm**, Git repositories, declarative **Kubernetes** manifests, environment-specific values, desired-state configuration, deployment health checks, release promotion, rollback inputs

GITHUB ACTIONS & CI/CD

Reusable workflows, workflow inputs, job dependencies, Linux/Windows runners, build agents, dependency/cache diagnostics, automated tests, ACR image publication, release artifacts, approvals, Git branching; **Azure DevOps** YAML, Jenkins

AZURE INFRASTRUCTURE & IAC

Terraform modules, remote state, plan reviews, environment isolation, Azure networking, **AKS**, ACR, managed identities, private access, Bicep, ARM templates, Ansible

CONTAINERS & PLATFORM OPERATIONS

Docker, **Kubernetes**, **AKS**, namespaces, RBAC, workload identity, health probes, HPA, node pools, capacity planning, upgrades, certificates, OpenShift application administration

OBSERVABILITY & INCIDENT RESOLUTION

Azure Monitor, Log Analytics, Application Insights, Prometheus, Grafana, ELK, alerts, deployment diagnostics, root-cause analysis, recovery checklists, runbooks

DEVSECOPS & GOVERNANCE

SonarQube, JFrog Artifactory, Xray, code-quality gates, image validation, least privilege, secrets management, release permissions, audit-ready change records

AUTOMATION & DEVELOPER ENABLEMENT

Python, PowerShell, Bash, Linux/Unix, Windows agents, FastAPI, REST APIs, Jenkins shared libraries, build tooling, onboarding and self-service workflows

AI & KUBERNETES SERVICES

GPU workload support, Milvus, Qdrant, **Helm**, persistent storage, resource sizing, health checks, backup/restore; AI-assisted automation and documentation

PROFESSIONAL EXPERIENCE

Lead Azure DevOps Engineer | **AT&T Services Inc.**

08/2023 - Present

Skills Used: Azure, **Terraform**, **Azure DevOps**, Jenkins, **AKS**, **Argo CD**, **Helm**, Python, PowerShell, Bash, SonarQube, JFrog Artifactory, **Azure Monitor**, OpenShift, Milvus, Qdrant, **GitHub Actions**, Git, **Docker**, **Azure Container Registry**, **Containerization**

- Built reusable **GitHub Actions** and **Azure DevOps** workflow stages for container builds, automated tests, image publication, environment promotion, and post-deployment verification.
- Published versioned container images to **Azure Container Registry** from **GitHub Actions** pipelines and maintained reviewed image references in **Helm** configuration for **AKS** promotion.
- Operated **AKS** delivery with **Argo CD** and **Helm**, maintaining Git-versioned application configuration, environment values, deployment health checks, and reviewed release recovery procedures.
- Designed and maintained Azure platform foundations with reusable **Terraform** modules for networking, identity, storage, and **AKS**, aligning infrastructure changes with application dependencies and platform standards.
- Deployed Milvus and Qdrant on Azure **Kubernetes** infrastructure with **Helm**, configuring persistent storage, resource sizing, access controls, backup procedures, and restore checks.
- Separated container build and artifact publication from **GitOps** deployment configuration, preserving versioned image references and reviewed environment changes for repeatable releases.
- Maintained reusable **GitHub Actions** workflow inputs, artifact paths, environment settings, and job dependencies; validated changes in isolated jobs before adoption by application teams.

- Troubleshoot **GitOps** delivery failures by correlating repository changes, **Helm** configuration, **Kubernetes** events, image-pull errors, and application health checks.
- Provided senior escalation support for complex production incidents, isolating Azure infrastructure, networking, **Kubernetes**, and pipeline failures and coordinating verified recovery with engineering teams.
- Managed **Terraform** remote state, environment isolation, plan reviews, and approval controls to keep infrastructure changes reproducible and traceable.
- Configured Linux and Windows **GitHub Actions** runners and shared toolchains, diagnosing dependency, cache, credential, and execution-capacity failures.
- Integrated container image validation and **security** checks with release workflows, coordinating dependency remediation and deployment readiness with developers.
- Developed PowerShell, Bash, and Python automation for provisioning checks, operational diagnostics, deployment readiness, and recurring administration tasks.
- Administered **Kubernetes** access, workload identity, private service connectivity, certificates, and secrets, using managed identities and Key Vault for protected deployment inputs.
- Integrated SonarQube quality feedback, container validation, and artifact promotion controls into release workflows; maintained versioned delivery packages and supporting evidence.
- Administered OpenShift application projects, routes, role bindings, and deployment settings; published onboarding patterns and troubleshooting guidance for platform consumers.
- Reviewed **Kubernetes** requests, limits, autoscaling, and node-pool capacity with application owners to improve stability, utilization, and infrastructure cost visibility.
- Reviewed platform designs and pull requests, mentored engineers, and partnered with Development, QA, Architecture, **Security**, and Infrastructure teams on standards, roadmap priorities, and technical tool evaluations.
- Built **Docker** images for Python/FastAPI microservices, standardizing runtime dependencies, application entrypoints, environment configuration, and container health checks.
- Integrated Jenkins and SonarQube quality gates with JFrog Artifactory publication, build metadata, and controlled artifact promotion for repeatable application releases.
- Maintained release recovery checklists, rollback inputs, incident runbooks, and post-incident corrective actions to improve readiness for production disruptions.
- Configured Linux and Windows build agents, diagnosed dependency, cache, credential, and capacity failures, and standardized toolchain prerequisites for reliable execution.

Senior DevOps Engineer | [GlobalLogic](#)

03/2023 - 08/2023

Skills Used: Azure, **GitHub Actions**, **Terraform**, Linux, **Docker**, **Kubernetes**, Jenkins, SonarQube, JFrog Artifactory, OpenShift

- Built reusable **GitHub Actions** workflows for application builds, automated tests, and release promotion, partnering with developers to standardize inputs and environment configuration.
- Maintained **Terraform** configuration and Ansible automation for Azure environment setup, reviewing deployment plans and Linux configuration drift.
- Validated reusable **GitHub Actions** changes in isolated jobs, checking workflow inputs, artifact paths, dependency ordering, and environment settings before wider rollout.
- Maintained **Kubernetes** and OpenShift application deployments, configuring **Helm** values, routes, health probes, resource limits, and recovery steps for shared services.
- Automated runner readiness and deployment diagnostics with Python and shell scripts, publishing troubleshooting utilities for application teams.
- Organized artifact feeds and repository consumption patterns and coached engineers on merge workflows, pipeline ownership, and environment promotion.
- Standardized **Docker** image builds and runtime configuration for **Kubernetes** services, validating application startup, required dependencies, and image-pull readiness before deployment.
- Built Jenkins stages with SonarQube analysis and JFrog Artifactory publication, validating release packages, build metadata, and artifact promotion across environments.
- Standardized **Docker** images, **Kubernetes** deployment patterns, branch protections, and image-validation checks to make releases easier for developers to troubleshoot.
- Maintained Linux/Windows GitHub runners and shared build tooling, diagnosing dependency, cache, credential, and execution-capacity failures.
- Protected deployment inputs with Key Vault and least-privilege service connections; validated required checks and documented release handoffs.

Senior DevOps Engineer II | [Akamai Technologies](#)

12/2021 - 03/2023

Skills Used: Azure, **GitHub Actions**, **Terraform**, **AKS**, **Argo CD**, **Helm**, Ansible, **Azure Monitor**, Jenkins, SonarQube, JFrog Artifactory, Milvus

- Built **GitHub Actions** and Jenkins pipelines for Azure-hosted microservices, integrating Maven tests, ACR image publication, and **Kubernetes** deployment checks.
- Deployed Milvus services on Azure **Kubernetes** infrastructure, validating **Helm** configuration, persistent volumes, resource capacity, **monitoring**, and operational readiness.
- Delivered Azure infrastructure with reusable **Terraform** modules and ARM templates; reviewed infrastructure plans and environment configuration.
- Used **GitHub Actions** to build and publish Azure-hosted microservice images and verified release configuration before **Kubernetes** promotion.
- Implemented **Argo CD GitOps** and **Helm** packaging for **AKS**, managing versioned environment values, application health verification, and validated rollback inputs.
- Diagnosed **GitOps** and **CI/CD** failures by reviewing Git changes, image versions, **Helm** values, workload events, and Azure telemetry.
- Packaged containerized microservices with **Docker** and **Helm** for **AKS**, managing versioned images, environment settings, health probes, and post-deployment validation.
- Developed Python and shell checks for infrastructure dependencies and release verification, improving consistent execution across Azure environments.
- Maintained Linux build runners and automated environment configuration with Ansible and scripts to keep build dependencies and execution environments consistent.
- Published binaries and container images to JFrog Artifactory from Jenkins pipelines and enforced SonarQube quality feedback before release promotion.
- Improved service visibility with **Azure Monitor**, Log Analytics, and Application Insights; partnered with developers on incidents and recovery documentation.
- Diagnosed **Kubernetes** scheduling, image-pull, and service-connectivity failures, correlating workload events with cloud telemetry to restore reliable delivery.
- Coordinated **AKS** node maintenance and application upgrades, verifying workload readiness and recovery steps with service owners before production changes.

Senior DevOps Engineer / Senior SRE | [Turvo India Pvt Ltd](#)

04/2020 - 12/2021

Skills Used: Azure, **Terraform**, CloudBees CI, Groovy, Python / FastAPI, JFrog, **Kubernetes**, Jenkins, SonarQube, JFrog Artifactory, Qdrant

- Provisioned Azure application infrastructure with **Terraform** and Ansible, maintaining environment-specific release configuration.
- Standardized **Docker/Helm** deployment patterns for **AKS** services and payment workloads, validating configuration, health checks, and production readiness.
- Supported Qdrant deployment and administration for vector-search services, configuring persistent storage, resource limits, API access, health checks, and recovery procedures.
- Partnered with microservice developers on build dependencies, unit and integration test stages, test-result publication, and repeatable promotion of release artifacts.

- Developed Python FastAPI services integrating Jenkins, Jira, and JFrog to automate project onboarding and provide self-service access to delivery workflows.
- Worked with developers during production incidents, defect isolation, and sprint retrospectives; turned recurring support issues into platform fixes and reusable guidance.
- Built Python Prometheus exporters and highly available **monitoring** stacks with Ansible, Grafana, and Node Exporter to expose application and platform health.
- Managed artifact retention and dependency access for shared delivery services, troubleshooting repository failures and preserving approved build inputs for recovery.
- Administered CloudBees CI (Jenkins Enterprise), JFrog Artifactory, and Xray for SaaS product engineering, supporting reliable builds, secure artifact storage, and release execution.
- Developed Groovy Jenkins shared libraries for image versioning and artifact publishing, allowing developers to reuse tested pipeline steps across services.

Senior DevOps Engineer | [HCL Technologies](#)

02/2019 - 04/2020

Client: Mercedes-Benz Research & Development India

Skills Used: Azure, **Terraform**, Jenkins, Maven, Ansible, **Kubernetes**, **Helm**, SonarQube, JFrog Artifactory, OpenShift

- Maintained **Kubernetes** and OpenShift application configuration, troubleshooting routes, service connectivity, image pulls, and deployment readiness across shared environments.
- Partnered with developers on Azure platform and **CI/CD** improvements, translating service requirements into infrastructure and deployment standards.
- Versioned Azure deployment parameters and ARM/Ansible automation, reviewing infrastructure changes alongside application releases.
- Built Jenkins and Maven delivery workflows for REST microservices across test, **security**-validation, UAT, and production environments.
- Integrated SonarQube analysis and JFrog Artifactory publishing into Jenkins microservice workflows, keeping quality checks and release artifacts traceable.
- Validated certificate expiry and service connectivity during release readiness checks, coordinating configuration fixes with application and infrastructure owners.
- Implemented ELK and **Azure Monitor** visibility; documented incident diagnostics and release procedures for application and platform teams.
- Reviewed release permissions and Key Vault integration with application teams, maintaining deployment validation and audit-ready change records.
- Coordinated database and API deployment dependencies with developers, validating release order and recovery readiness before production handoff.
- Scripted Linux and application health validation with Python and Bash, capturing diagnostic output for operational handoffs.

DevOps Engineer | [Mphasis Ltd](#)

08/2016 - 12/2018

Client: HPE

Skills Used: Azure, **Terraform**, Ansible, Python, Linux, Nexus, Jenkins, SonarQube, JFrog Artifactory

- Automated Azure infrastructure and application provisioning with **Terraform**, ARM templates, and Ansible, maintaining environment-specific configuration for controlled releases.
- Validated environment readiness and application dependencies before deployments, checking cloud access, network connectivity, and required configuration.
- Integrated SonarQube code-quality checks and JFrog Artifactory publication into Jenkins workflows for API, database, and UI release artifacts.
- Captured deployment manifests and configuration baselines for environment handoffs, helping support teams trace runtime failures to source or release changes.
- Built **CI/CD** workflows for API, database, and UI components with development teams, standardizing build dependencies and release promotion for shared application services.
- Packaged containerized services with **Helm** and versioned environment values, validating deployment health and recovery before release.
- Defined Git branching and protected-branch checks, versioned artifacts, and environment parameters for repeatable application promotion.
- Validated cloud deployment permissions and protected credentials, documenting access and configuration prerequisites for application teams.
- Documented onboarding, platform configuration, and support procedures, helping developers adopt repeatable environment and release practices.
- Maintained Jenkins build agents and Python/Bash automation, diagnosing toolchain, cache, credential, and execution failures to support reliable shared delivery.

EDUCATION

B.Tech (2009-2013) in Information Technology

Prakasam Engineering College, Jawaharlal Nehru Technological University, Kakinada
