Aggressive, results-driven Lead Cloud & DevOps Engineer with 10+ years of full software development lifecycle experience architecting large-scale, distributed applications in mission-critical environments. Deep technical expertise across **Unix/Linux, AWS, Jenkins, Jules, Python, Shell scripting, and SQL**. Proven track record of driving extreme resiliency, high performance, and robust Disaster Recovery (DR) postures for enterprise cloud platforms. Highly skilled at engineering advanced CI/CD automation, enforcing DevSecOps controls, supporting **REST APIs, Spring Boot, and Node.js** microservices, and enabling event-driven architectures leveraging **JMS** and cloud messaging APIs. Strong champion of Test-Driven Development (TDD) and continuous delivery, consistently partnering with cross-functional teams to deliver secure, scalable, and highly available infrastructure.

CERTIFICATIONS

AWS Certified Solutions Architect - Associate

Microsoft Certified: Azure DevOps Engineer Expert

GitLab Certified Associate

Microsoft Certified: Azure Fundamentals

MuleSoft Certified Developer - Level 1

KEY PLATFORM ACHIEVEMENTS

- Mission-Critical Resiliency** Engineered highly resilient, large-scale distributed cloud architectures on AWS, strictly enforcing disaster recovery, performance optimization, and rigorous failover testing.
- Advanced CI/CD Automation** Architected aggressive deployment automation strategies using Jenkins, Jules, and GitLab CI, accelerating release velocity while embedding TDD, security scanning, and automated testing.
- Cloud Native Ecosystems** Led DevOps enablement for high-throughput Spring Boot, Node.js, and REST API microservices, optimizing runtime environments across EKS and native AWS.
- Event-Driven Infrastructure** Provisioned and scaled infrastructure for event-driven architectures, integrating messaging platforms including JMS, AWS SNS/SQS, and Kafka to decouple enterprise domains.
- Security & Governance** Hardened platform security posture by systematically integrating IAM, policy-driven DevSecOps controls, MFA, and continuous application security scanning directly into CI/CD workflows.

CORE TECHNOLOGIES

OPERATING SYSTEMS

Unix, Linux, RHEL, Ubuntu, HP-UX, Windows Server

CI/CD & AUTOMATION

Jenkins, Jules, GitHub Actions, GitLab CI, AWS CodePipeline, ArgoCD, Ansible, Terraform

CLOUD & INFRASTRUCTURE

AWS (EC2, EKS, VPC, Route 53, ALB/NLB, CloudFront, S3), Disaster Recovery, Multi-Region Architecture

DEVELOPMENT & SCRIPTING

Python, Shell, Bash, PowerShell, Java (Spring Boot), JavaScript (Node.js), REST APIs, Core Algorithms

DATA & MESSAGING

SQL, PostgreSQL, MySQL, Amazon RDS, JMS, event-driven architectures, Milvus, Databricks

MONITORING & RESILIENCY

CloudWatch, Grafana, Prometheus, Splunk, ELK, fault-tolerant design, performance tuning

CONTAINERS & ORCHESTRATION

Docker, Kubernetes, EKS, Helm, OpenShift

PROFESSIONAL EXPERIENCE

Lead DevOps Engineer | AT&T Services Inc.

08/2023 - Present

Skills Used: AWS, Jenkins, Jules, Python, Shell, Spring Boot, Node.js, SQL, TDD

- Architected scalable, high-throughput CI/CD pipelines across AWS environments using Jenkins, Jules, and GitHub Actions, rapidly automating build, test, and enterprise release execution.
- Drove platform resiliency and optimization for mission-critical REST APIs and distributed applications built on Spring Boot and Node.js, ensuring exceptional performance at scale.
- Automated comprehensive disaster recovery (DR) protocols and performance tuning mechanisms, minimizing RTO/RPO across multi-region AWS architectures.
- Spearheaded Unix/Linux-based automation efforts using Python and Shell scripting, aggressively reducing manual toil and accelerating infrastructure provisioning.
- Integrated robust TDD workflows, automated testing gates, and dynamic application security scans into release pipelines, enforcing strict DevSecOps compliance.
- Provided cloud infrastructure and deployment support for event-driven architectures utilizing messaging APIs (JMS/Kafka), enabling asynchronous, highly scalable microservice communication.
- Managed database release pipelines for relational stores (SQL, PostgreSQL) alongside modern vector search platforms (Milvus), enforcing secure schema evolution and querying capabilities.
- Orchestrated incident response and cross-functional troubleshooting in a high-pressure, large-scale environment, rapidly mitigating disruptions and restoring technical alignment.

Senior DevOps Engineer | GlobalLogic

03/2023 - 08/2023

Skills Used: AWS, Linux, GitLab CI, Kubernetes, Python, SQL

- Deployed, hardened, and scaled Linux-based build agents across mission-critical CI/CD operations, dynamically auto-scaling infrastructure to meet peak engineering demands.
- Collaborated aggressively with software engineering teams across the full SDLC to enforce automated testing standards, branch protections, and container image validation.
- Administered complex Kubernetes clusters, deploying resilient pods, services, and core platform components tailored for REST API performance and low-latency data access.
- Migrated legacy pipelines into modernized GitLab CI architectures, standardizing CI/CD best practices and embedding deep application security protocols.
- Optimized Docker image builds, SQL database integration deployments, and runtime environments to guarantee strict parity between staging and production tiers.
- Troubleshoot complex pipeline, container, and Unix/Linux host issues, systematically eliminating deployment blockers and accelerating time-to-market for large-scale applications.

Senior DevOps Engineer II | Akamai Technologies

12/2021 - 03/2023

Skills Used: AWS, Python, Shell, Terraform, Disaster Recovery, Resiliency

- Engineered unyielding disaster recovery and backup architectures utilizing AWS Elastic Disaster Recovery, strictly adhering to aggressive resiliency mandates for enterprise workloads.
- Automated AWS infrastructure provisioning using Terraform and CloudFormation, standardizing secure VPC networks, ALB routing, and Multi-AZ deployments for highly available web applications.
- Designed and maintained resilient Jenkins and Git-based CI/CD pipelines, automating the continuous delivery of Python, Node.js, and Java-based artifacts to EKS.
- Authored extensive library of Shell and Python automation scripts, institutionalizing reusable DevOps capabilities and core algorithms across distributed engineering teams.
- Supported deployment of event-driven components and integrated telemetry and monitoring (CloudWatch, Prometheus) to proactively resolve performance bottlenecks.
- Published versioned artifacts, managed secure SQL migrations, and enforced environment consistency to support large-scale upstream engineering operations.

Senior DevOps Engineer / Senior SRE | Turvo India Pvt Ltd

04/2020 - 12/2021

Skills Used: AWS, Python, Jenkins, JMS, Security, Kubernetes

- Designed CI/CD automation and DevSecOps pipelines for AWS environments, tightly integrating code quality checks (SonarQube) and TDD processes to enforce elite release standards.
- Executed platform engineering best practices to amplify the reliability and scale of message-driven architectures, utilizing JMS and REST APIs for logistics and supply chain systems.
- Developed custom internal APIs using Python (FastAPI) to bridge Jenkins, Jira, and JFrog, demonstrating strong coding skills to drive aggressive operational efficiency.
- Authored and enforced custom IAM security controls, MFA, and identity isolation policies, ensuring airtight application security across highly regulated multi-account AWS environments.
- Developed customized Prometheus exporters using Python to capture real-time operational metrics, vastly improving observability and performance tracking for core services.
- Delivered a repeatable Terraform and Kubernetes framework tailored for payment platform deployments, maintaining strict compliance and disaster recovery readiness.

Senior DevOps Engineer | HCL Technologies

02/2019 - 04/2020

Client: Mercedes-Benz Research & Development India

Skills Used: Unix/Linux, AWS, Jenkins, Spring Boot, Shell Scripting, SQL

- Executed large-scale workload migrations from on-premises Unix/Linux environments to AWS, utilizing robust modernization strategies for enterprise Spring Boot applications and relational SQL databases.
- Built continuous delivery pipelines leveraging Jenkins, aggressively supporting REST-based microservices across a myriad of delivery environments (Sandbox, UAT, PROD).
- Architected enterprise monitoring pipelines via the ELK stack, delivering critical insights into infrastructure health, security events, and system resiliency.
- Managed Helm-based release packaging and deployed intricate Kubernetes workloads for large-scale, mission-critical applications.
- Automated configuration drift remediation for fleet-level Linux instances, utilizing Shell scripting to continually enforce enterprise baseline security standards.
- Acted as a crucial technical liaison between cross-functional teams in India and Germany, presenting impactful DevOps strategies and securing alignment from non-technical stakeholders.

EDUCATION

Bachelor's Degree in Information Technology (Engineering/Technology)
Prakasam Engineering College, Jawaharlal Nehru Technological University, Kakinada
